What is OASIS?

OASIS is a suite of interactive tools used to access the Georgia Department of Public Health's standardized health data repository. OASIS and the Repository are designed, built and maintained by the Office of Health Indicators for Planning (OHIP).

[Click here for a 1-page highlight of OASIS Tools](#)

[Click here for a 1-page highlight of the OASIS Community Health Needs Assessment Dashboard.](#)

[Click here for a 1-page highlight of the OASIS Mapping Tool.](#)

What's in OASIS?

The standardized health data repository used by OASIS is currently populated with Vital Statistics (births, deaths, fetal deaths, induced terminations, pregnancies), Hospital Discharge, Emergency Room Visit, Arboviral Surveillance, Youth Risk Behavior Survey (YRBS), Behavioral Risk Factor Surveillance Survey (BRFSS), STD, Motor Vehicle Crash, and Population data. Other datasets/data sources will be added. We welcome inquiries about translating your data into more meaningful information through OASIS. If more detailed information is needed, please [contact us](#).

[List of Indicators in OASIS](#)

What can you do with OASIS?

Indicators in each tool are selectable by a variety of population, disease, and survey characteristics. Where applicable, you can choose data by age groups, race, ethnicity, sex (person), census tract, county commission district, county, health district, legislative district, perinatal region, state (place), and year (time). All tables, charts and maps pertain to place of residence, except crash data which is by place of occurrence.

What can OASIS do for you?

OASIS plays an integral role in program planning, which includes determining target population areas, formulating financial plans, monitoring program effectiveness, program evaluation and reporting program outcomes.

Use OASIS data querying tools to:

- Develop profiles and report cards for counties or districts
- Assess community health needs, prioritize health problems, and evaluate programs
- Assemble data for grant writing, health analysis, special projects or state legislative reporting
- Examine data by census tract to identify high risk populations, and allocate resources
- Identify areas that contribute a disproportionate share of a health issue
- Target problem areas to analyze specific health problems and outcomes
- Create a basis for health communications or health advocacy
- Apply GIS to analyze varied environmental risks focused on disease process, economic status and other environmental variables that influence health outcomes
- Map several geographic areas to compare varied health outcomes

Trust OASIS to:

- Present data more efficiently

OASIS Web Query - Maternal Child Health (MCH) Statistics

This tool creates tables of county-level public health statistics and indicators.

OASIS (Online Analytical Statistical Information System) is a suite of tools used to access the Georgia Department of Public Health's standardized health data repository. With this tool you can obtain:

- Birth, Pregnancy, and Induced Termination statistics by county, state, public health district for 1994-latest year available.
- Fetal Death statistics, Maternal Mortality, and Birth-related measures such as Low Birthweight by county, state, public health district, and [demographic cluster](#) for 1994-latest year available.

IMPORTANT NOTICE ABOUT KNOWN DATA ISSUES - PLEASE REVIEW BEFORE USING THIS TOOL

Multiple selections can be made by holding down the Control or Shift keys.

Download Results creates a tab-delimited ASCII text file which can be imported into any spreadsheet, word processing, database or analysis software (Excel, Word, SPSS, etc.).
