| Childcare Facility*                          | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and exclude acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts  
  4. Identify susceptible students and staff who are at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases | ≥ 5 cases within a 3 week period | 1. Confirm cases as probable varicella  
  2. Log information on the varicella outbreak form  
  3. Obtain specimens for lab confirmation  
  4. Identify and exclude all varicella cases (primary and breakthrough)  
  5. Notify parents and school staff  
  6. Identify and prophylax susceptible students and staff who are at high risk for developing severe disease or at high risk for complications.  
  7. Recommend vaccination for susceptible contacts  
  8. Collaborate with Public Health to exclude susceptible students and staff  
  9. Report the outbreak to the Health Department |
| Pre-School*                                  | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and exclude acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts  
  4. Identify susceptible students and staff who are at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases | ≥ 3 cases within a 3 week period | 1. Log information on the varicella outbreak form  
  2. Obtain specimens for lab confirmation  
  3. Notify all residents and staff  
  4. Identify and isolate all varicella cases (primary and breakthrough)  
  5. Screen residents and staff for susceptibility  
  6. Collaborate with Public Health to exclude susceptible staff  
  7. Vaccinate susceptible staff and residents  
  8. Report the outbreak to the Health Department |
| Kindergarten*                                | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and exclude acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts; Recommend vaccination for all susceptible persons  
  4. Identify and prophylax susceptible contacts at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases | ≥ 3 cases within a 3 week period | 1. Log information on the varicella outbreak form  
  2. Obtain specimens for lab confirmation  
  3. Notify all residents and staff  
  4. Identify and isolate all varicella cases (primary and breakthrough)  
  5. Screen residents and staff for susceptibility  
  6. Collaborate with Public Health to exclude susceptible staff  
  7. Vaccinate susceptible staff and residents  
  8. Report the outbreak to the Health Department |
| Elementary School*                           | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and exclude acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts  
  4. Identify susceptible students and staff who are at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases |                                  |                                                                                        |
| Middle School*                               | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and exclude acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts  
  4. Identify susceptible students and staff who are at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases |                                  |                                                                                        |
| High School*                                 | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and exclude acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts  
  4. Identify susceptible students and staff who are at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases |                                  |                                                                                        |
| Residential Institutions for adolescents and adults: | ≥ 1 suspected case       | 1. Confirm case(s) as probable varicella  
  2. Identify and isolate acute case(s) (primary and breakthrough)  
  3. Identify vaccination status of contacts; Recommend vaccination for all susceptible persons  
  4. Identify and prophylax susceptible contacts at high risk for developing severe disease or at high risk for complications  
  5. Surveillance for more cases |                                  |                                                                                        |
| Prison/Jail                                  |                          |                                                                                        |                            |                                                                                        |
| Juvenile Hall                                |                          |                                                                                        |                            |                                                                                        |
