

Georgia Weekly Influenza Report

MMWR Week 10

Updated 3/17/2017

Week 10 (March 5 — March 11, 2017) Synopsis

During week 10 there was high influenza-like illness activity in Georgia with regional occurrences of sustained flu transmission.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **4.59%**, which is **above** the Georgia baseline of 2.1%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **REGIONAL** during week 10.
- **Metro Area Hospitalizations:** There were 33 hospitalizations due to influenza infection during week 10. There have been 940 hospitalizations due to influenza so far this season.
- **Influenza Related Deaths:** There were 0 confirmed deaths due to influenza. There have been 5 confirmed influenza-associated deaths as of 3/17/2017.
- **Viral Surveillance:** Of the **540** specimens tested by Georgia clinical laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) during week 10, **94 (17.41%)** were positive for influenza. Public Health Laboratories tested 16 specimens during week 10, 6 were positive for influenza.
- **Reported Influenza Outbreaks:** There have been 24 influenza outbreaks reported to DPH between 10/02/2016 and 03/11/2017.
- **RSV Viral Surveillance:** Of the **366** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 10, the percent positive of **ALL** laboratory tests was 8.47%.

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **52** ILINet providers reporting in Georgia.)

ILINet Provider Network Data

This Week: **4.59%** of patients seen in ILINet Provider offices were seen with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

ILINet Patient Visits By Age Group

ILINet patient visits by age group

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During **week 10** those under 24 years of age were most often seen with ILI symptoms by ILINet providers.

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>)

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is: **High = 10**

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

REGIONAL

Outbreaks of influenza OR Increases in ILI cases and recent laboratory-confirmed influenza cases in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions in region with the outbreaks; virus activity is no greater than sporadic in other regions

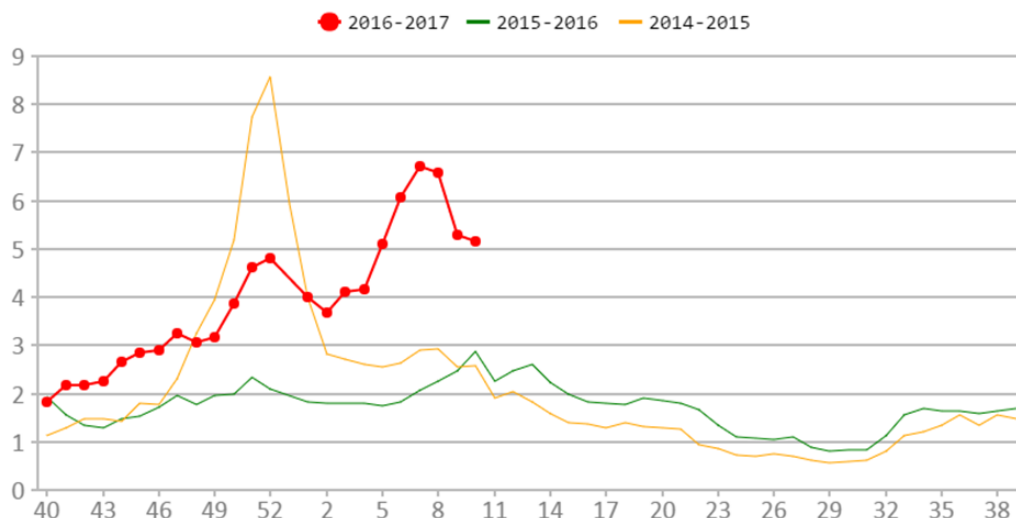

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

PUBLIC HEALTH**

Influenza Positive Tests Reported to Public Health by Georgia Clinical Laboratories, Georgia, 2016-2017, Week 01 - 10

During **week 10** Georgia clinical laboratories reporting to NREVSS tested 540 specimens for influenza, 94 (17.41%) were positive. Both influenza A and B were identified.

Note: No subtyping information will be released from clinical laboratories

Influenza Positive Tests from Public Health Laboratories, Georgia, 2016-2017, Week 51 - 08

Public Health Laboratories tested 16 specimens for influenza during **week 10**, 6 were positive for influenza. Influenza A(H3N2) and influenza B were identified.

Georgia threshold of RSV season on-set and end

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of **ALL** lab confirmed tests are less than 10%.

RSV Season Status: OFF
