### **EXECUTIVE SUMMARY**

TOBACCO USE IS THE NUMBER ONE PREVENTABLE CAUSE OF DEATH IN THE COUNTRY. TOBACCO CONSUMPTION IS RESPONSIBLE FOR MORE THAN 400,000 DEATHS EACH YEAR, OR ONE IN EVERY FIVE DEATHS. IN ADDITION TO THIS HEALTH BURDEN, THE NATIONAL ECONOMIC BURDEN OF TOBACCO USE IS MORE THAN \$50 BILLION IN DIRECT MEDICAL COSTS. IN GEORGIA, TOBACCO KILLS MORE THAN 10,000 RESIDENTS ANNUALLY AND COSTS \$1.8 BILLION IN HEALTH CARE EXPENDITURES.

Approximately 80% of adult smokers began smoking before the age of 18. The earlier tobacco use begins, the more likely a lifestyle pattern will develop that includes tobacco use, resulting in increased risk for tobacco-related illnesses. Yet, tobacco use continues to be popular among adolescents and young adults, with nearly 3,000 young people under the age of 18 becoming regular smokers, everyday. Among Georgia's youth, nearly one in six middle school students and nearly one in three high school students currently use some form of tobacco product.

This report presents the findings from a survey of tobacco use among North Georgia Health District middle school students. The survey was conducted in conjunction with the statewide 2001 Georgia Youth Tobacco Survey (GYTS). The GYTS is intended to enhance the capacity of organizations and community groups to design, implement, and evaluate tobacco use prevention and reduction programs. The continued implementation of the survey will result in the ability to target, evaluate, and periodically refocus statewide programs to reduce dependence of Georgians on tobacco products.

Overall, this report shows that in the North Georgia Health District ...

#### **Tobacco Use Prevalence**

- 18.3% of middle school students currently use some form of tobacco.
- 12.7% of middle school students currently smoke cigarettes.
- males are more likely than females to use smokeless tobacco.

#### **Access to Cigarettes**

- 23.5% of middle school smokers get their cigarettes by giving money to someone else to buy them.
- 71.7% of middle school students purchase their cigarettes at places other than a gas station, a convenience store, a grocery store, a drug store, or a vending machine.

<sup>&</sup>lt;sup>2</sup> Miller VP, Ernest C, Collin F. Smoking-attributable medical care costs in the USA. Social Science & Medicine 1999;48:447-458.

### EXECUTIVE SUMMARY continued ...

#### Cessation

- more than half (57.1%) of middle school smokers would like to stop smoking.
- 73.2% of middle school smokers are confident in their ability to quit smoking cigarettes.
- 55.9% of middle school smokers have attempted to quit smoking.
- 11.1% of middle school smokers have participated in a program to help them quit using tobacco at some time in their lives.

#### **Knowledge & Attitudes**

- 83.0% of middle school smokers think that people can become addicted to tobacco, just as they can become addicted to cocaine or heroin.
- 63.5% of middle school smokers and 76.5% of non-smokers have discussed with their parent or guardian about the dangers of tobacco use.
- 60.5% of middle school students were taught in school about the dangers of tobacco use.

#### **Social Influences**

- 84.9% of middle school students who have never smoked will say NO if their best friends offers them a cigarette.
- middle school smokers are significantly more likely than non-smokers to think that smokers have more friends (45.6% vs. 9.7%) and look cool (45.4% vs. 5.0%).
- middle school smokers (89.8%) are significantly more likely than non-smokers (23.8%) to have close friends who smoke.

#### **Media & Advertising**

- 27.5% of middle school smokers and 20.7% of non-smokers have participated in community events to prevent tobacco use.
- about three-fourths (74.1%) of middle school students have seen or heard commercials on tobacco use prevention within the 30 days preceding the survey.
- 84.7% of middle school students have seen actors on television and in movies using tobacco products.
- 34.1% of middle school students have seen athletes on television using tobacco.

## EXECUTIVE SUMMARY continued ...

#### **Environmental Tobacco Smoke (ETS)**

- middle school smokers (82.1%) are significantly more likely than non-smokers (53.8%) to have been in a room with someone smoking cigarettes on one or more of the 7 days preceding the survey.
- middle school smokers (79.5%) are significantly more likely than non-smokers (38.9%) to have ridden in a car with someone smoking cigarettes on one or more of the 7 days preceding the survey.
- current smokers (70.7%) are significantly more likely than non-smokers (40.8%) to live with a smoker.

• • •

Preventing tobacco use among youth, before it begins, is imperative. The findings from this report, coupled with ongoing tobacco surveillance, can assist the Georgia Department of Human Resources and the individual health districts in developing and implementing comprehensive and appropriate tobacco prevention programs.

## INTRODUCTION

TOBACCO USE IS THE MOST PREVENTABLE CAUSE OF MORTALITY IN THE UNITED STATES. EACH YEAR MORE THAN 400,000 PEOPLE DIE IN THIS COUNTRY FROM TOBACCO-RELATED ILLNESSES. BEYOND THE LOSS OF HUMAN LIFE, TOBACCO USE PLACES A TREMENDOUS BURDEN ON THE NATIONAL ECONOMY, COSTING MORE THAN \$50 BILLION IN DIRECT MEDICAL COSTS.3 IN GEORGIA, TOBACCO KILLS MORE THAN 10,000 RESIDENTS ANNUALLY AND COSTS \$1.8 BILLION IN HEALTH CARE EXPENDITURES—70% OF WHICH COMES DIRECTLY FROM RESIDENTS' TAX DOLLARS.4

A lifetime of smoking often begins in early adolescence. Approximately 80% of adult smokers began smoking before the age of 18. The earlier tobacco use begins, the more likely a lifestyle pattern will develop that includes tobacco use, resulting in increased risk for tobacco-related illnesses and mortality. Yet, tobacco use continues to be popular among adolescents and young adults, with nearly 3,000 young people under the age of 18 becoming regular smokers, everyday. Among Georgia's youth, nearly one in six middle school students and nearly one in three high school students currently use some form of tobacco product.

> To address the problem of tobacco use in Georgia, the Department of Human Resources, Division of Public Health, Chronic Disease and Health Promotion Branch, has developed the Tobacco Use Prevention Program. The mission of the Tobacco Use Prevention Program (TUPS) is to coordinate strategies in tobacco use prevention and control, provide assistance on policy development, and serve as a resource center for tobacco issues. In collaboration with the Epidemiology Branch, TUPS monitors the public health burden of tobacco, the use of tobacco, and existing policy.

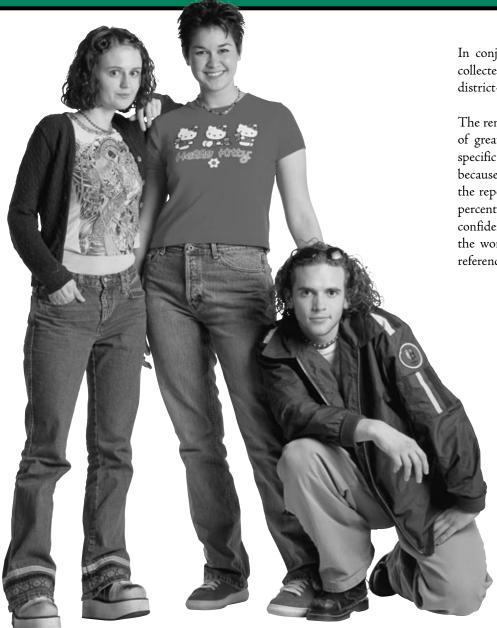

> The Program promotes changing environmental factors in order to reduce tobacco use and provides project support to the state coalition for tobacco use prevention as well as to local programs and coalitions in all 19 Public Health districts. Working in collaboration with the Coalition for a Healthy And Responsible Georgia (CHARGe), the Program develops strategies that focus on preventing tobacco use among youth, protecting people from environmental tobacco smoke, and encouraging smoking cessation.

The Program focuses on four primary policy areas that have been shown to reduce tobacco use, which include: 1) Smoke-free (clean) indoor air, 2) Preventing youth access to tobacco products, 3) Increasing tax on tobacco, and 4) Reducing the advertising and promotion of tobacco.

The Georgia Youth Tobacco Survey (GYTS) is intended to serve as a baseline assessment of tobacco use behaviors among middle school and high school youth throughout the state. Data collected through the GYTS will enhance the capacity of organizations and community groups to design, implement, and evaluate tobacco use prevention and reduction programs. Continued, rigorous surveillance will result in the capacity to target, evaluate, and periodically refocus statewide programs to reduce dependence of Georgians on tobacco products.

## INTRODUCTION continued ...

In conjunction with the statewide survey, nine of the 19 health districts in Georgia collected local YTS data. The North Georgia Health District was successful in collecting district-specific data for middle schools.

The remainder of this report provides in depth information on the tobacco-related topics of greatest interest to the North Georgia Health District. Where available, district-specific data is compared to the GYTS.<sup>5</sup> Black students were excluded from analysis because the number of respondents was too small for meaningful analysis. Throughout the report, when data are said to be significantly different, there is no overlap in the 95 percent confidence intervals of the percentages being compared. Ninety-five percent confidence intervals for each point estimate (percentage) appear in detailed data tables and the wording of the questions are presented in Appendix A and Appendix B, and are referenced at the top of each page of corresponding results.

## **CURRENT USE OF ANY TOBACCO PRODUCTS<sup>1</sup>**

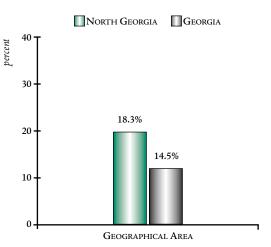

#### (Table 1, Question 1)

- 18.3% of middle school students in the North Georgia district currently use one or more tobacco products, which is comparable the Statewide middle school average of 14.5%.
- 24.8% of sixth graders are current tobacco users.
- There are no significant differences between males and females in their likelihood to use tobacco products.
- There are no significant differences among racial/ethnic groups in their likelihood to use tobacco products.

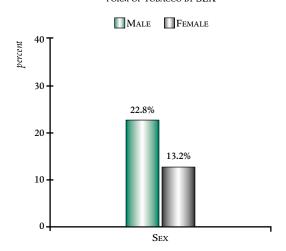

PERCENT OF STUDENTS WHO CURRENTLY USE SOME FORM OF TOBACCO BY GRADE

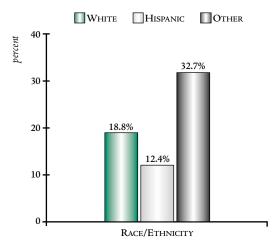

PERCENT OF STUDENTS WHO CURRENTLY USE SOME FORM OF TOBACCO BY SEX

## PERCENT OF STUDENTS WHO CURRENTLY USE SOME FORM OF TOBACCO BY RACE/ETHNICITY

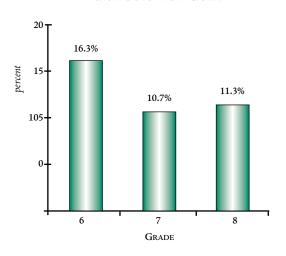

Composite variable: includes use of cigarettes, cigars, smokeless tobacco, pipes, or bidis on  $\geq 1$  of the 30 days preceding the survey.

## **CURRENT CIGARETTE SMOKERS**

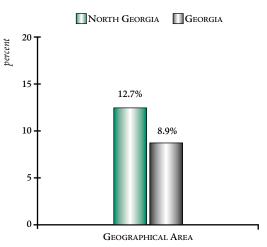

### (Table 1, Question 2)

- 12.7% of middle school students in the North Georgia district currently smoke cigarettes, which is comparable to the Statewide middle school average of 8.9%.
- 16.3% of sixth graders are cigarette smokers.
- There are no significant differences between males and females in their likelihood of smoking cigarettes.
- There are no significant differences between White and Hispanic students in their likelihood of smoking cigarettes.

PERCENT OF STUDENTS WHO CURRENTLY SMOKE CIGARETTES BY RACE/ETHNICITY

# CURRENT CIGARETTE SMOKERS IN 9 OF GEORGIA'S HEALTH DISTRICTS

- In high schools, there is no significant difference among the 9 Georgia's Health Districts in prevalence of cigarette smokers (range from 21.4% to 28.2%).
- In middle schools, there is more variability among the 9 Georgia's Health Districts in prevalence of cigarette smokers (range from 4.3% to 12.8%).
- This is the first time local data on YTS were collected in conjunction with statewide data collection.

	Current Cigarette Smokers

## **CURRENT SMOKERS' USUAL CIGARETTE BRAND**

### (Table 2, Question 3)

- 64.4% of middle school students cite Marlboro® as their preferred brand of cigarettes.
- 14.0% of middle school students smoke other cigarette brands.
- 9.6% of middle school smokers do not have a preferred brand of cigarettes.
- 7.7% of middle school smokers cite Newport® as their preferred brand of cigarettes.
- 4.4% of middle school smokers cite Camel® as their preferred brand of cigarettes.

#### **OVERALL**

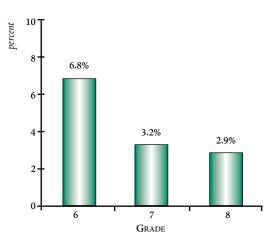

## **SMOKING ON SCHOOL PROPERTY**

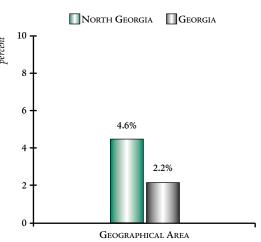

### (Table 3, Question 4)

- 4.6% of middle school students in the North Georgia district smoke cigarettes on school property, which is comparable to the Statewide average of 2.2%.
- 6.8% of sixth graders smoke cigarettes on school property.
- There are no significant differences between males and females in their likelihood to smoke cigarettes on school property.
- There are no significant differences among racial/ethnic groups in their likelihood to smoke cigarettes on school property.

## **CIGARETTES' POINT OF ACCESS**

#### (Table 4, Question 9)

- The most common way for middle school students who smoke to get cigarettes is by "some other way" (27.4%), followed by giving money to someone else (23.5%), and by borrowing them from someone else (22.9%).
- 10.5% of the smokers get their cigarettes from someone older than 18, 4.1% get their cigarettes from a store and 0.6% from a vending machine.

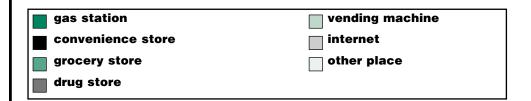

#### **OVERALL**

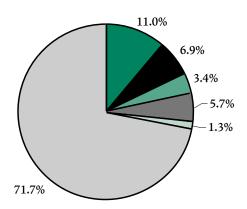

### **CIGARETTES' POINT OF PURCHASE**

### (Table 5, Question 10)

- 11.0% of current middle school smokers buy their cigarettes at a gas station, 6.9% buy them at a convenience store, 5.7% buy them at a drug store, 3.4% buy them at a grocery store, and 1.3% buy them from a vending machine.
- 71.7% of current middle school smokers buy their cigarettes at some other place.

#### **OVERALL**

## **CURRENT SMOKERS' DESIRE TO QUIT**

(Table 6, Question 11)

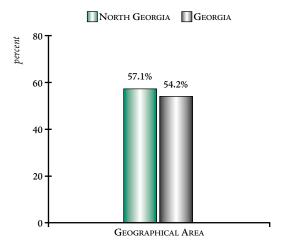

• 57.1% of middle school smokers in the North Georgia district would like to quit smoking, which is comparable to the Statewide middle school average of 54.2%.

# CURRENT SMOKERS' CONFIDENCE IN ABILITY TO QUIT

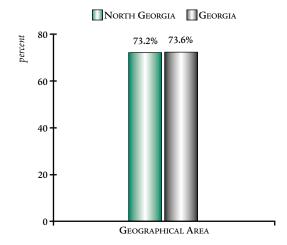

(Table 6, Question 12)

• 73.2% of middle school smokers in the North Georgia district are confident in their ability to quit smoking, if they wanted to quit, which is comparable to the Statewide middle school average of 73.6%.

## PERCENT OF CURRENT SMOKERS WHO WISH TO QUIT BY GEOGRAPHICAL AREA

## PERCENT OF STUDENTS WHO ARE CONFIDENT THEY COULD QUIT SMOKING NOW BY GEOGRAPHICAL AREA

## **CURRENT SMOKERS' ATTEMPTS TO QUIT**

(Table 6, Question 13)

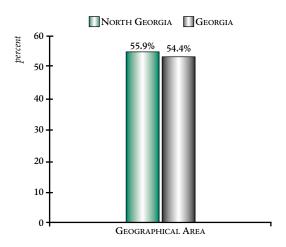

• 55.9% of middle school smokers in the North Georgia district have attempted to quit smoking within the past 12 months, which is comparable to the Statewide middle school average of 54.4%.

## CURRENT SMOKERS' PARTICIPATION IN A QUIT PROGRAM

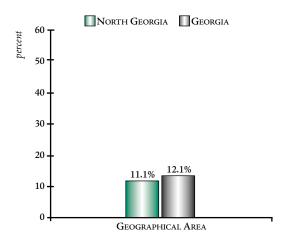

(Table 6, Question 14)

• 11.1% of middle school smokers in the North Georgia district have participated in a program to help them quit smoking at some time in their lives, which is comparable to the Statewide middle school average of 12.1%.

## PERCENT OF CURRENT SMOKERS WHO ATTEMPTED TO QUIT IN PAST 12 MONTHS BY GEOGRAPHICAL AREA

## PERCENT OF CURRENT SMOKERS WHO HAVE EVER PARTICIPATED IN A CESSATION PROGRAM BY GEOGRAPHICAL AREA

18

## CURRENT SMOKERS' ATTITUDE ON THE ADDICTIVE NATURE OF TOBACCO

(Table 7, Question 15)

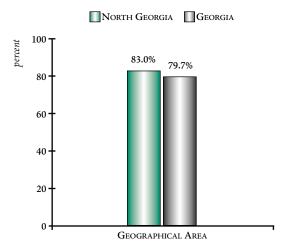

• 83.0% of middle school smokers in the North Georgia district think that people can get addicted to tobacco just like getting addicted to cocaine or heroin, which is comparable to the Statewide middle school average of 79.7%.

## IT IS SAFE TO SMOKE FOR A YEAR OR TWO AS LONG AS SMOKER QUITS

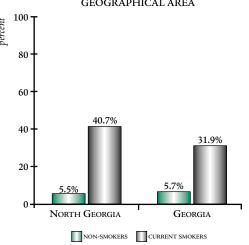

(Table 9, Question 16)

• 40.7% of middle school smokers and 5.5% of middle school non-smokers in the North Georgia district think that it is safe to smoke for a year or two, as long as the smoker is able to quit afterwards, which are comparable to the Statewide middle school smoking and non-smoking averages of 31.9% and 5.7%, respectively.

## PERCENT OF CURRENT SMOKERS WHO THINK TOBACCO IS ADDICTIVE BY GEOGRAPHICAL AREA

## PERCENT OF STUDENTS WHO BELIEVE IT IS SAFE TO SMOKE FOR A YEAR OR TWO BY GEOGRAPHICAL AREA

# STUDENTS WHO HAVE DISCUSSED WITH PARENT OR GUARDIAN ABOUT THE DANGERS OF TOBACCO USE

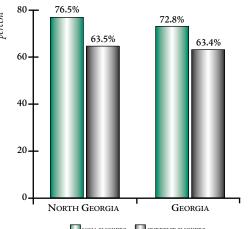

#### (Table 9, Question 17)

- 63.5% of middle school smokers and 76.5% of middle school non-smokers in the North Georgia district have discussed with their parents or legal guardian about the dangers of tobacco use, which are comparable to the Statewide smoking and non-smoking middle school averages of 63.4% and 72.8%, respectively.
- Middle school non-smokers are significantly more likely than smokers to have discussed with their parents or legal guardian about the dangers of tobacco use.

NON-SMOKERS CUBRENT SMOKERS

PERCENT OF STUDENTS WHO WILL NOT SMOKE, EVEN IF BEST FRIEND OFFERS CIGARETTES BY RACE/ETHNICITY

### **ARE SMOKERS MORE POPULAR?**

#### (Table 8, Question 20)

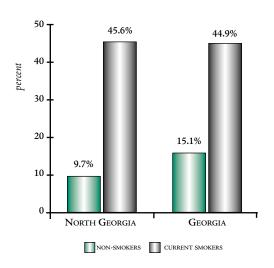

- 45.6% of middle school smokers and 9.7% of non-smokers in the North Georgia district think that young people who smoke cigarettes have more friends, which are comparable to the Statewide smoker and non-smoker averages of 44.9% and 15.1%, respectively.
- Middle school students who smoke cigarettes are significantly more likely than their non-smoking counterparts to think that young people who smoke cigarettes have more friends.

## **ARE SMOKERS MORE COOL?**

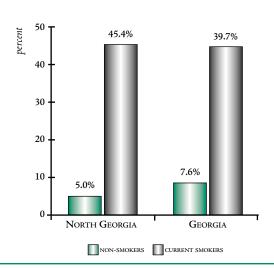

#### (Table 8, Question 21)

- 45.4% of middle school students who smoke cigarettes and 5.0% of non-smokers in the North Georgia district think that young people who smoke cigarettes are cool or fit in, which are comparable to the Statewide smoking and non-smoking averages of 39.7% and 7.6%, respectively.
- Middle school smokers are significantly more likely than their non-smoking counterparts to think that young people who smoke cigarettes are cool or fit in.

#### PERCENT OF STUDENTS WHO THINK SMOKERS HAVE MORE FRIENDS BY GEOGRAPHICAL AREA

#### PERCENT OF STUDENTS WHO THINK SMOKERS ARE MORE COOL OR FIT IN BY GEOGRAPHICAL AREA

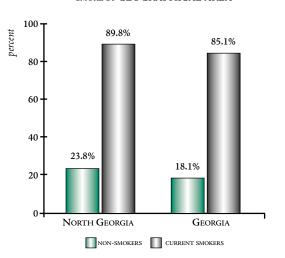

## **CLOSE FRIENDS WHO SMOKE**

### (Table 8, Question 22)

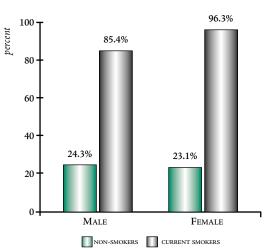

• 89.8% of middle school smokers and 23.8% of non-smokers in the North Georgia district have one or more close friends who smoke, which are comparable to the Statewide smoking and non-smoking averages of 85.1% and 18.1%, respectively.

• Middle school students who smoke cigarettes are significantly more likely than their non-smoking counterparts to have one or more close friend who smokes.

PERCENT OF STUDENTS WITH CLOSE FRIENDS WHO SMOKE BY GEOGRAPHICAL AREA

## PARTICIPATION IN COMMUNITY EVENTS TO PREVENT TOBACCO USE

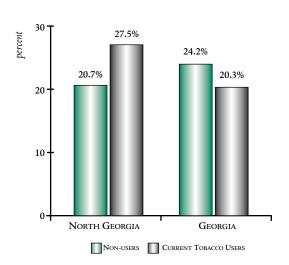

(Table 10, Question 23)

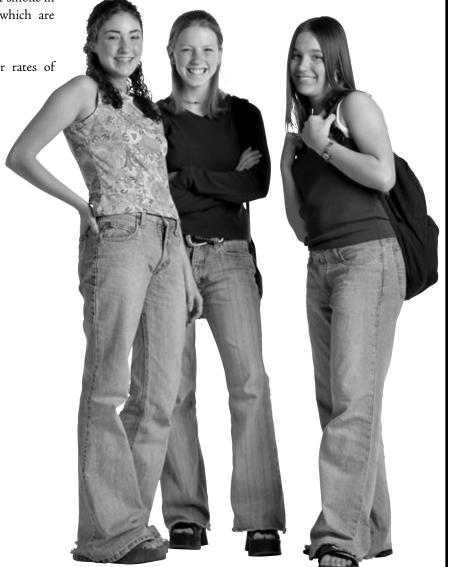

• 27.5% of all middle school students who smoke and 20.7% of all middle school students who do not smoke in the North Georgia district have participated in community events to prevent tobacco use, which are comparable to the Statewide smoking and non-smoking averages of 20.3% and 24.4%, respectively.

• There are no significant differences among middle school smokers and non-smokers in their rates of

participation in community events to prevent tobacco use.

#### GEOGRAPHICAL AREA

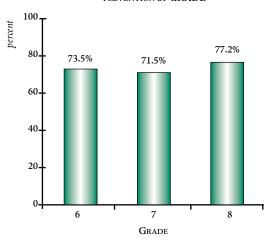

## SEEN OR HEARD COMMERCIALS ON TOBACCO USE PREVENTION

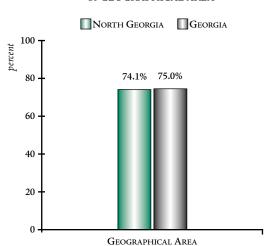

(Table 11, Question 24)

- 74.1% of middle school students in the North Georgia district have seen or heard commercials on tobacco use prevention within the 30 days preceding the survey, which is comparable to the State middle school average of 75.0%.
- There are no significant differences between males and females in their exposure to commercials on tobacco use prevention within the 30 days preceding the survey.
- There are no significant differences among racial/ethnic groups in their likelihood to have seen or heard antismoking commercials within the 30 days preceding the survey.

## **ENVIRONMENTAL TOBACCO SMOKE: ROOM**

#### (Table 12, Question 27)

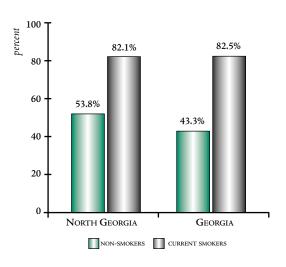

- 82.1% of cigarette smokers have been in the same room with a cigarette smoker on one or more days of the preceding seven days, which is comparable to the Statewide smoking average of 82.5%.
- 53.8% of non-smokers have been in the same room with a cigarette smoker on one or more days of the preceding seven days, which is significantly higher than the Statewide non-smoking average of 43.3%.
- Middle school smokers are significantly more likely than non-smokers to have been in the same room with a cigarette smoker.

## ENVIRONMENTAL TOBACCO SMOKE: CAR

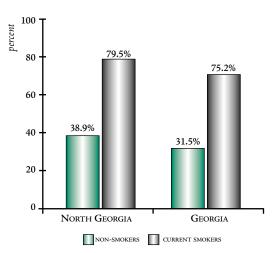

### (Table 12, Question 28)

- 79.5% of students who smoke and 38.9% of non-smokers have ridden in a car with a cigarette smoker during the past seven days, which are comparable to the Statewide middle school smoking and non-smoking averages of 75.2% and 31.5%, respectively.
- Middle school smokers are significantly more likely than non-smokers to have ridden in a car with a cigarette smoker.

#### GEOGRAPHICAL AREA

#### GEOGRAPHICAL AREA

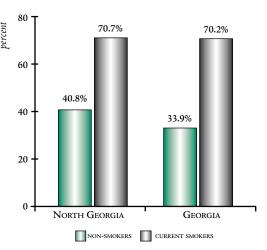

## **ENVIRONMENTAL TOBACCO SMOKE: HOME**

### (Table 12, Question 29)

- 70.7% of middle school smokers and 40.8% of non-smokers live with a cigarette smoker, which are comparable to the Statewide smoking and non-smoking averages of 70.2% and 33.9%, respectively.
- Middle school smokers are significantly more likely than non-smokers to live with a cigarette smoker.

#### GEOGRAPHICAL AREA

### **METHODS**

THE PURPOSE OF THE NORTH GEORGIA HEALTH DISTRICT YOUTH TOBACCO SURVEY (YTS) WAS TO GATHER INFORMATION REGARDING USAGE OF, ATTITUDES TOWARD, AND EXPOSURE TO TOBACCO PRODUCTS. TO ACCOMPLISH THIS, THE GYTS USED A PAPER-AND-PENCIL QUESTIONNAIRE ADMINISTERED FOLLOWING CDC'S METHODOLOGY FOR THE YOUTH TOBACCO SURVEY (YTS).

#### **Questionnaire Development**

The questionnaire was developed by the Georgia Division of Public Health, Tobacco Use Prevention Program, in collaboration with the CDC Office on Smoking and Health. The GYTS included a core set of YTS questions developed by CDC, first implemented by a small number of States as early as 1998, and now adopted by the overwhelming majority of States in conducting their own YTS. The questionnaire covered eight topics: tobacco use (bidis, cigarettes, cigars, kreteks, pipes, and smokeless tobacco), exposure to secondhand smoke, smoking cessation, school curriculum, minors' ability to purchase or obtain tobacco products, knowledge and attitudes about tobacco, familiarity with pro-tobacco and antitobacco media messages, and demographics. The questionnaire contained 69 items.

#### **Sampling**

#### Sample Design

Separate middle school and high school samples were selected, with an objective of having 95% confidence limits of approximately ±5% around key smoking variables. The sampling frame consisted of all public schools containing students enrolled in grades 6-8 for the middle schools 9-12 and for the high schools. A two-stage cluster sample design was used to produce a representative sample of middle school students in grades 6-8 and high school students in grades 9-12. The sampling program PC-Sample was used to draw both the middle school and high school samples.

#### Sampling Procedures

<u>School Level</u> - The first-stage sampling frame consisted of all public schools containing any of grades 6-8 for the middle schools and 9-12 for the high schools. Schools were selected with probability proportional to school enrollment size (PPS).

The original sample included 20 public schools. All of the ten sampled middle schools but only five high schools participated in the survey, making the overall response rate for high schools less than the desired 60%, and thus excluding that population from analysis. Black middle school students in the North Georgia health district were excluded from analysis due to a small response number.

## METHODS continued...

<u>Class Level</u> - The second sampling stage consisted of systematic equal probability sampling (with a random start) of classes from each middle school and high school that participated in the survey. All 2nd period classes or all sections of a required course in the selected schools were included in the sampling frame.

Student Level - All students in a selected class were eligible to participate in the survey. Student make-ups were also conducted.

#### **Data Collection**

#### Recruitment of Sampled School Districts and Schools

School district and school recruitment began in late September 2001. Prior to beginning district and school recruitment, letters were sent to the regional tobacco coordinators representing those districts to obtain additional names of supportive contacts, document helpful background information, and ask if the regional contacts would be willing to make pre-contact calls to encourage participation. In addition, plans were made to coordinate the implementation of the 2001 statewide GYTS with a local YTS, if one was being conducted.

Once these contacts were made, tailored letters of invitation were sent to the school districts. These letters were followed by phone calls directly to the superintendent to answer questions and obtain permission to contact the school. School packets were included with the district invitation packet and the superintendents were asked to forward these on to the principal after their approval was received. The recruitment process sometimes included the completion of special research proposals, attendance at board meetings and principal meetings, and other clearance procedures.

As soon as notification was received that a school packet had been sent to the principal, the principal was called, a contact person was assigned, classes selected, and a date for data collection was scheduled.

#### Classroom-level Data Collection

The North Georgia YTS was administered between October 16 and November 30 by district staff. Detailed arrangements and survey schedules were set prior to each school visit.

## METHODS continued...

### Weighting

For both the middle school and high school data, a weight variable was calculated for each student record to reflect the likelihood of sampling each student and to reduce bias by compensating for differing patterns of non-response. The weight used for estimation is given by:

$$W = W1 * W2 * f1 * f2 * f3 * f4$$

W1 = the inverse of the probability of selecting the school

W2 = the inverse of the probability of selecting the classroom within the school

f1 = a school-level non-response adjustment factor calculated by school size category (small, medium, large).

f2 = a class adjustment factor calculated by school

f3 = a student-level non-response adjustment factor calculated by class

f4 = a post stratification adjustment factor calculated by gender, grade, and race

SUDAAN was used to compute 95% confidence intervals, which were used to determine the differences between subgroups at the p<0.05 level. Difference between prevalence estimates were considered statistically significant if the 95% confidence intervals did not overlap.

# METHODS continued... GYTS RESPONSE RATES

<sup>&</sup>lt;sup>1</sup> Overall Response Rate = School Response Rate \* Student Response Rate

When response rate is less than 60%, the data was not weighted and reported.

## **APPENDIX A – SURVEY QUESTIONS**

- **1.** During the past 30 days, have you [used any form of tobacco]<sup>1</sup>?
- **2.** During the past 30 days, on how many days did you smoke cigarettes?
- **3.** During the past 30 days, what brand of cigarettes did you usually smoke?
- **4.** During the past 30 days, on how many days did you smoke cigarettes on school property?
- **5.** During the past 30 days, on how many days did you smoke cigars, cigarillos, or little cigars?
- **6.** During the past 30 days, on how many days did you smoke bidis?
- **7.** During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip?
- **8.** During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip on school property?
- **9.** During the past 30 days, how did you usually get your cigarettes?
- **10.** During the past 30 days, where did you buy the last pack of cigarettes you bought?
- **11.** Do you want to stop smoking cigarettes?
- **12.** Do you think you would be able to stop smoking cigarettes now if you wanted to?
- **13.** During the past 12 months, did you ever try to quit smoking cigarettes?
- **14.** Have you ever participated in a program to help you quit using tobacco?
- **15.** Do you think people can get addicted to using tobacco just like they can get addicted to using cocaine or heroin?
- **16.** Do you think it is safe to smoke for only a year or two, as long as you quit after that?
- **17.** In the past 12 months, how often have your parents or guardians discussed the dangers of tobacco use with you?
- **18.** During the school year, were you taught in any of your classes about the dangers of tobacco use?
- **19.** If one of your best friends offered you a cigarette, would you smoke it?
- **20.** Do you think young people who smoke cigarettes have more friends?
- **21.** Do you think smoking cigarettes makes young people look cool or fit in?
- **22.** How many of your four closest friends smoke cigarettes?
- 23. During the past 30 days, have you participated in any community activities to discourage people your age from using cigarettes, chewing tobacco, snuff, dip, or cigars?
- **24.** During the past 30 days, have you seen or heard commercials on TV, the Internet, or on the radio about the dangers of cigarette smoking?
- **25.** When you watch TV or go to movies, how often do you see actors using tobacco?
- **26.** When you watch TV, how often do you see athletes using tobacco?
- **27.** During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
- **28.** During the past 7 days, on how many days did you ride in a car with someone who was smoking cigarettes?
- **29.** Does anyone who lives with you now smoke cigarettes?

Five questions contributed to this composite variable including use of cigarettes, cigars, smokeless tobacco, pipes, or bidis on ≥ 1 of the 30 days preceding the survey.

## APPENDIX B - DETAILED DATA TABLES

 TABLE 1:
 Prevalence of current\* tobacco use among middle school students by sex, grade and race/ethnicity
