## INTRODUCTION

The Georgia Trauma Annual Report 2020 is a demographic epidemiological analysis of the Georgia Trauma Registry data for the year 2020 based on data downloaded on Oct 1, 2021. The Designated Trauma Centers (DTC) in Georgia participate in the National Trauma Data Bank (NTDB). In 2020, Georgia had 31 DTC; 6 facilities were designated at Level I, 9 were Level II, 8 were Level III, and 8 were designated at Level IV. Included in facility totals are one Level I pediatric facility and two Level II pediatric facilities. A total of 36,192 trauma cases were reported in 2020 from 31 DTC in Georgia.

Facility information such as trauma levels is provided to allow readers to have an overall picture of the Georgia Designated Trauma Centers (Appendix 1). Trauma registry criteria are provided in the Appendix 2. This report provides analysis of time to definitive care, patient's demographic information, injury characteristics, payment sources, intents, mortality, and outcomes.

The mission of the Georgia trauma system is to save lives and provide the best possible outcomes through improved trauma care and injury prevention. The Georgia Trauma Registry is dedicated to collect trauma data and provide useful information to benefit the public health of Georgia's citizens.

The purpose of this report is to inform the medical community, the public, and the decision makers about issues that characterize the most recent state of care for trauma patients. Implications of this report are wide in areas including epidemiology, injury prevention, research, education, acute care, resource allocation, and policy decision.
The Georgia Department of Public Health, Office of EMS and Trauma would like to thank all the trauma centers that contributed data. Many thanks go to the Georgia trauma coordinators, trauma registrars and staff for their great efforts in collecting data and improving data quality.

## Contact Information:

Office of EMS and Trauma
Michael Johnson, Director of the Office of EMS and Trauma, Michael.johnson@dph.ga.gov

Marie Probst, Trauma Registrar, marie.probst@dph.ga.gov

## VISION, MISSION, CORE VALUES

## VISION

A Healthy and Safe Georgia - exceptional patient outcomes through comprehensive, statewide, integrated, data-driven, equitable, and peoplecentered Emergency Medical Services and time-sensitive systems of care.

## MISSION

The mission of the Georgia Office of EMS and Trauma is to reduce death and disability by providing regulation, guidance, and leadership to enable the assessment, planning, development, and promotion of statewide Emergency Medical Services and time-sensitive systems of care.

## CORE VALUES

DPH's workforce is guided by the following core values in carrying out our public health work:

- People - We value our employees as professional colleagues. We treat out customers, clients, partners, and those we serve with respect by listening, understanding, and responding to needs.
- Excellence - Commitment, accountability, and transparency for optimal efficient, effective, and responsive performance.
- Partnership - Internal and external teamwork to solve problems, make decisions, and achieve common goals.
- Innovation - New approaches and progressive solutions to problems. Embracing change and accepting reasonable risk.
- Science - The application of the best available research, data and analysis leading to improved outcomes.

## SUMMARY

## HOSPITALS

31 designated trauma hospitals submitted data in 2020.

- 5 Level I adult centers
- 1 Level I pediatric center.
- 7 Level II adult centers
- 2 Level II pediatric centers.
- 8 Level III adult centers.
- 8 Level IV adult centers.

## A G E

- The frequency of injuries initially peak in ages 20 to 31 , primarily from MVT-related incidents, and peak again between the ages of 56 and 82, when falls begin to increase.
- Fall-related injuries spike in children aged 0-8 and adults over the age of 60.
- Males account for $68.2 \%$ of all incidents up to age 70 ; after age 70 , most patients are female.

## MECHANISM OF INJURY

The mechanism of injury was based on NTDB published reference 'External Cause of Injury Matrix and Trauma Type Map (https://www.facs.org/quality-programs/trauma/tqp/center-programs/ntdb).

- Falls account for $43.2 \%$ of cases in the registry data. The frequency of Fall related injuries increases in children under age 9 and adults over the age of 60 .
- Motor vehicle traffic related (MVT) injuries account for $29.5 \%$ of cases in the registry data. The frequency of MVT injuries peak between age 18 to 31.
- Firearm injuries account for $8.3 \%$ of cases in the registry data and peak between age 18 to 31 .
- Suffocation and firearm injuries have the highest case fatality rates, with suffocation at $16.7 \%$ and firearm at $15.5 \%$.

## INJURY SEVERITY SCORE

The Injury Severity Score (ISS) is a system for numerically stratifying injury severity. The ISS system has a range of 1-75, and injury severity increases with a higher score. This report groups ISS 1-8 as minor; 9-15 as moderate; 16-24 as severe; and greater than 24 as very severe.

- Almost half ( $44.8 \%$ ) of the trauma registry patients suffered minor injuries and about one-third (38.9\%) have moderate injuries.
- Case fatality rates increase with injury severity, with the most severe group experiencing a case fatality rate of almost $42.3 \%$.
- Median Length of Stay (LOS) increases for each consecutive severity grouping.
- Median Ventilator Days increase for each consecutive severity grouping.
- Median Intensive Care Unit (ICU) Days increase for each consecutive severity grouping.

## MORTALITY

- The overall mortality rate is $4.4 \%$.
- Case fatality rates are highest in the patient age group 25-34.
- The male case fatality rate $(5.2 \%)$ is much higher than female case fatality rate (3.1\%).
- The largest number of deaths is caused by motor vehicle traffic injuries, followed by firearm injuries and fall-related injuries.
- Firearm, suffocation, and poisoning have the highest case fatality rates.
- Firearm injuries have the highest case fatality rate at $15.5 \%$ among the selected mechanisms (top six) shown in the report.

## P A Y M E N T

- Medicare is the largest payment source at 26.9\%.
- Private/Commercial insurance is the second largest category at 20.9\%.
- Self-Pay is the third largest category at $19.6 \%$.
- Medicaid is the fourth largest category at $11.5 \%$.

All facilities seeking designation status are expected to meet specific criteria as set forth by the Department of Public Health, Office of EMS and Trauma (OEMST). The department utilizes the document, "Resources for Optimal Care of the Injured Patient", published by the American College of Surgeons. All designated hospital must submit trauma registry data to the OEMST and maintain a performance improvement process with thorough documentation.

## LEVEL I TRAUMA FACILITY

The highest level of trauma center designation offers the greatest level of comprehensive trauma care, from prevention through rehabilitation. Level I facilities have the major responsibility for leading in trauma education, research, and planning. Facilities that meet Level I criteria will be academic facilities.

## LEVEL II TRAUMA FACILITY

The second level of trauma center designation offers the same level of clinical care as a Level I, but usually does not have the focus on research, education, and systems planning. Some patients with very complex injuries, such as replantation, may require transfer to a Level I center.

## LEVEL III TRAUMA FACILITY

The third level of trauma center designation provides trauma assessment, resuscitation, emergency surgery, stabilization, and if needed, transfer of patients requiring more definitive care to Level I or II centers. Well trained emergency department physicians and general surgeons are required.

## LEVEL IV TRAUMA FACILITY

The fourth level of trauma center designation provides advanced trauma life support and stabilization of patients received in their facility. Well trained mid-level providers may assist to expedite the transfer of patients requiring more definitive care to Level I or II centers. Level IV centers may be a clinic or hospital in a remote or rural area and may or may not have a physician available 24 hours a day.

## DATA TABLES AND FIGURES

## Table 1: Facilities by Level

More than half of the designated trauma facilities are either a Level III or Level IV trauma center.

| Level | Number | Percent |
| :---: | :---: | :---: |
| I | 6 | 19.4 |
| II | 9 | 29.0 |
| III | 8 | 25.8 |
| IV | 8 | 25.8 |
| Total | 31 | 100.0 |

Table 2: Incidents by Facility Level About 88.7\% trauma patients were treated in Level I or Level II trauma facilities.

| Level | Number | Percent |
| :---: | :---: | :---: |
| I | 18,713 | 51.7 |
| II | 13,403 | 37.0 |
| III | 3,569 | 9.9 |
| IV | 507 | 1.4 |
| Total | 36,192 | 100.0 |

Figure 1: Facilities by Level This chart represents the overall counts of facilities by designation level.

Figure 2A: Incidents by Facility Level This chart represents the overall counts of facilities by designation level.

Figure 2B: Percent of Incidents by Facility Level This graph represents the percentage of incidents by facility designation level.

## PREHOSPITAL INFORMATION

The goal of the Emergency Medical Services (EMS) system is to prevent further injury, initiate resuscitation, and provide safe and timely transport of the injured patient. Patients should be transported directly to the center most appropriately equipped and staffed to handle the patient's injuries. The tables and graphs in this section display data indicating where patients came from before arriving at a designated trauma center.

Table 3: Incidents by EMS Region
The frequency of trauma patients in Table 3 represents the number of patients treated in designated trauma centers located in different EMS regions. In 2020, there were no designated trauma centers in EMS Region 4. Facilities in EMS Region 3 treated the most trauma patients (47.3\%).

| EMS Region | Frequency | Percent |
| :---: | :---: | :---: |
| R1 | 2,506 | 6.9 |
| R2 | 2,262 | 6.3 |
| R3 | 17,133 | 47.3 |
| R5 | 3,892 | 10.8 |
| R6 | 2,943 | 8.1 |
| R7 | 1,182 | 3.3 |
| R8 | 705 | 2.0 |
| R9 | 3,666 | 10.1 |
| R10 | 1,903 | 5.3 |
| Total | 36,192 | 100.0 |

Table 4: Frequency of Patients by the Location the Patient Arrived from and ISS Groups
The table represents the counts of patients by the location the patient arrived from and Injury Severity Score groups. The frequency missing equals 86 .

| Frequency | ISS $<=15$ | ISS $>15$ | Total | Percent |
| :---: | :---: | :---: | :---: | :---: |
| Scene | 18,768 | 4,865 | 23,633 | 65.5 |
| Referring <br> Hospital | 6,900 | 1,352 | 8,252 | 22.9 |
| Home | 2,464 | 183 | 2,647 | 7.3 |
| Other | 704 | 65 | 769 | 2.1 |
| Not <br> Applicable | 20 | 6 | 26 | 0.1 |
| Unknown | 615 | 164 | 779 | 2.2 |
| Total | 29,471 | 6,635 | 36,106 | 100.0 |

Figure 3A: Incidents by EMS Region
This chart represents the overall counts of incidents by EMS region.

## TIME TO DEFINITIVE CARE ANALYSIS PART I

The time to definitive care analysis is presented in two parts. The first part represents the cases involving medical transport from the scene of injury to the hospital emergency department where the patient received definitive trauma care. In the trauma registry data, 23,633 cases ( $65.5 \%$ ) reported the patient arrived from the 'Scene' of the injury, which are the original data sources for Scene Group (S Group).

The second part represents the cases involving the patient being referred to a second hospital for definitive trauma care. Additionally, 8,252 cases (22.9\%) reported the patient arrived from a 'Referring Hospital', which are the original data sources for Referring Group ( R Group).

For Patients from the 'Scene' of the Injury: S Group
There are 23,633 cases reported to have arrived from the 'Scene' of the injury. Among these 23,633 cases, 21,029 cases were linked with a Prehospital Provider data. Among these 21,029 cases, 19,790 cases have the Emergency Medical Service (EMS) provider's role as 'Transport from Scene to Facility'. These 19,790 cases are the data sources of the S Group.

## Time from EMS Dispatch Time to EMS Scene Arrival Time (Tables 5A1, 5A2, 5A3)

Among these 19,790 cases, 17,980 cases (90.9\%) have valid values in the four fields: EMS Dispatch Date, EMS Dispatch Time, EMS Scene Arrival Date, and EMS Scene Arrival Time. Among these 19,790 cases, 9.1\% of the cases have missing data in at least one of the four fields. The data in the 17,980 cases is used to calculate the median time from EMS Dispatch to EMS Scene Arrival.

## Time from EMS Scene Arrival Time to EMS Scene Departure Time (Tables 5B1, 5B2, 5B3)

Among these 19,790 cases, 17,906 cases (90.5\%) have valid values in the four fields: EMS Scene Arrival Date, EMS Scene Arrival Time, EMS Scene Departure Date, and EMS Scene Departure Time. Among these 19,790 cases, $\mathbf{9 . 5 \%}$ of the cases have missing data in at least one of the four fields. The data from these 17,906 cases is used to calculate the median time from EMS Scene Arrival Time to EMS Scene Departure Time.

## Time from EMS Scene Departure Time to Hospital Emergency Department (ED) Arrival Time (Tables

 5C1, 5C2, 5C3)Among these 19,790 cases, 17,917 cases (90.5\%) have valid values in the four fields: EMS Scene Departure Date, EMS Scene Departure Time, ED Arrival Date, and ED Arrival Time. Among these 19,790 cases, 9.5\% of the cases have missing data in at least one of the four fields. The data from these 17,917 cases is used to calculate the median time from EMS Scene Departure Time to the Hospital ED Arrival Time.

## Time from EMS Dispatch Time to Hospital ED Arrival Time (Tables 5D1, 5D2, 5D3)

Among these 19,790 cases, 18,011 cases (91.0\%) have valid values in the four fields: EMS Dispatch Date, EMS Dispatch Time, ED Arrival Date, and ED Arrival Time. Among these 19,790 cases, 9.0\% of the cases have missing data in at least one of the four fields. The data from these 18,011 cases is used to calculate the median time from EMS Dispatch Time to Hospital ED Arrival Time.

Table 5A1: S Group, All ISS, Median Time from EMS Dispatch Time to EMS Scene Arrival Time

This chart represents the median overall time (HH:MM:SS) from EMS dispatch to EMS scene arrival for all Injury Severity Scores. The median total time from EMS dispatch time to EMS scene arrival time is 9 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 9,258 | $0: 09: 00$ |
| II | 6,929 | $0: 08: 00$ |
| III | 1,666 | $0: 08: 00$ |
| IV | 127 | $0: 09: 00$ |
| Total | 17,980 | $0: 09: 00$ |

Table 5A3: S Group, ISS >15, Median Time from EMS Dispatch Time to EMS Scene Arrival Time This chart represents the median time for Injury Severity Scores greater than 15 from EMS dispatch to EMS scene arrival time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 2,274 | $0: 09: 00$ |
| II | 1,416 | $0: 08: 00$ |
| III | 230 | $0: 08: 00$ |
| IV | 14 | $0: 12: 00$ |
| Total | 3,934 | $0: 08: 00$ |

Table 5A2: S Group, ISS <=15, Median Time from EMS Dispatch Time to EMS Scene Arrival Time

This chart represents the median time for Injury Severity Scores less than or equal to 15 from EMS dispatch to EMS scene arrival time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 6,984 | $0: 09: 00$ |
| II | 5,513 | $0: 08: 00$ |
| III | 1,436 | $0: 08: 00$ |
| IV | 113 | $0: 09: 00$ |
| Total | 14,046 | $0: 09: 00$ |

Table 5B1: S Group, All ISS, Median Time from EMS Scene Arrival Time to EMS Scene Departure Time This chart represents the median overall time (HH:MM:SS) from EMS scene arrival to EMS scene departure for all Injury Severity Scores. The median total time from EMS scene arrival to EMS scene departure time is 18 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 9,210 | $0: 19: 00$ |
| II | 6,906 | $0: 17: 00$ |
| III | 1,663 | $0: 20: 00$ |
| IV | 127 | $0: 18: 00$ |
| Total | 17,906 | $0: 18: 00$ |

Table 5B2: S Group, ISS<=15, Median Time from EMS Scene Arrival Time to EMS Scene

## Departure Time

This chart represents the median time for Injury Severity Scores less than or equal to 15 from EMS scene arrival time to EMS scene departure time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 6,946 | $0: 19: 00$ |
| II | 5,495 | $0: 17: 00$ |
| III | 1,434 | $0: 20: 00$ |
| IV | 113 | $0: 18: 00$ |
| Total | 13,988 | $0: 18: 00$ |

Table 5C1: S Group, All ISS, Median
Time from EMS Scene Departure Time to Hospital ED Arrival Time

This chart represents the median overall time (HH:MM:SS) from EMS scene departure to Hospital ED arrival time for all Injury Severity Scores. The median total time from EMS scene departure to Hospital ED arrival time is 24 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 9,220 | $0: 23: 00$ |
| II | 6,908 | $0: 24: 00$ |
| III | 1,662 | $0: 23: 30$ |
| IV | 127 | $0: 18: 00$ |
| Total | 17,917 | $0: 24: 00$ |

Table 5B3: S Group, ISS>15, Median Time from EMS Scene Arrival Time to EMS Scene Departure Time

This chart represents the median time for Injury Severity Scores greater than 15 from EMS scene arrival time to EMS scene departure time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 2,264 | $0: 16: 00$ |
| II | 1,411 | $0: 14: 00$ |
| III | 229 | $0: 18: 00$ |
| IV | 14 | $0: 21: 30$ |
| Total | 3,918 | $0: 16: 00$ |

Table 5C2: S Group, ISS <=15, Median Time from EMS Scene Departure Time to Hospital ED Arrival Time

This chart represents the median time for Injury Severity Scores less than or equal to 15 from EMS scene departure time to Hospital ED arrival time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 6,951 | $0: 24: 00$ |
| II | 5,495 | $0: 25: 00$ |
| III | 1,433 | $0: 24: 30$ |
| IV | 133 | $0: 19: 00$ |
| Total | 13,992 | $0: 24: 00$ |

Table 5C3: S Group, ISS>15, Median Time from EMS Scene Departure Time to Hospital ED Arrival Time

This chart represents the median time for Injury Severity Scores greater than 15 from EMS scene departure time to Hospital ED arrival time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 2,269 | $0: 22: 00$ |
| II | 1,413 | $0: 20: 00$ |
| III | 229 | $0: 22: 00$ |
| IV | 114 | $0: 12: 30$ |
| Total | 3,925 | $0: 21: 00$ |

Table 5D2: S Group, ISS<=15, Median Time from EMS Dispatch Time to Hospital ED Arrival Time

This chart represents the median time for Injury Severity Scores less than or equal to 15 from EMS dispatch time to Hospital ED arrival time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 7,000 | $0: 56: 00$ |
| II | 5,517 | $0: 53: 00$ |
| III | 1,435 | $0: 55: 00$ |
| IV | 113 | $0: 49: 00$ |
| Total | 14,065 | $0: 55: 00$ |

Table 5D1: S Group, All ISS, Median Time from EMS Dispatch Time to Hospital ED Arrival Time

This chart represents the median overall time (HH:MM:SS) from EMS dispatch time to Hospital ED arrival time for all Injury Severity Scores. The median total time from EMS dispatch time to Hospital ED arrival time is 53 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median Total <br> Time |
| :---: | :---: | :---: |
| I | 9,284 | $0: 55: 00$ |
| II | 6,935 | $0: 51: 00$ |
| III | 1,664 | $0: 54: 00$ |
| IV | 127 | $0: 49: 00$ |
| Total | 18,011 | $0: 53: 00$ |

Table 5D3: S Group, ISS>15, Median Time from EMS Dispatch Time to Hospital ED Arrival Time

This chart represents the median time for Injury Severity Scores greater than 15 from EMS dispatch time to Hospital ED arrival time (HH:MM:SS) by hospital designation level.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 2,284 | $0: 50: 00$ |
| II | 1,418 | $0: 44: 00$ |
| III | 230 | $0: 52: 00$ |
| IV | 14 | $0: 53: 30$ |
| Total | 3,946 | $0: 48: 00$ |

Table 5D4: S Group, ISS All, Median Time from EMS Dispatch Time to Hospital ED Arrival Time
In Destination EMS Region 8, the median total time from EMS Dispatch Time to Hospital ED Arrival Time is longest ( 60 minutes). EMS Region 4 is not included due to no data reported.

| Destination <br> EMS Region | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| 1 | 953 | $0: 52: 00$ |
| 2 | 1,259 | $0: 56: 00$ |
| 3 | 9,330 | $0: 52: 00$ |
| 5 | 1,529 | $0: 57: 00$ |
| 6 | 1,480 | $0: 53: 00$ |
| 7 | 388 | $0: 47: 00$ |
| 8 | 412 | $1: 00: 00$ |
| 9 | 1,484 | $0: 52: 00$ |
| 10 | 1,176 | $0: 54: 00$ |
| Total | 18,011 | $0: 53: 00$ |

Table 5D5: S Group, ISS <=15, Median Time from EMS Dispatch Time to Hospital ED Arrival Time In Destination EMS Region 8, for Patients ISS $<=15$, the median total time from EMS Dispatch Time to Hospital ED Arrival Time is the longest (59 minutes). EMS Region 4 is not included due to no data reported.

| Destination <br> EMS Region | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| 1 | 819 | $0: 53: 00$ |
| 2 | 1,042 | $0: 57: 00$ |
| 3 | 7,055 | $0: 54: 00$ |
| 5 | 1,236 | $0: 57: 00$ |
| 6 | 1,133 | $0: 54: 00$ |
| 7 | 293 | $0: 48: 00$ |
| 8 | 329 | $0: 59: 00$ |
| 9 | 1,183 | $0: 52: 00$ |
| 10 | 975 | $0: 55: 00$ |
| Total | 14,065 | $0: 55: 00$ |

Table 5D6: S Group, ISS >15, Median Time from EMS Dispatch Time to Hospital ED Arrival Time In Destination EMS Region 8, for patients ISS >15, median total time from EMS Dispatch Time to Hospital ED Arrival Time is the longest ( 63 minutes). EMS Region 4 is not included due to no data reported.

| Destination <br> EMS Region | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| 1 | 134 | $0: 50: 00$ |
| 2 | 217 | $0: 51: 00$ |
| 3 | 2,275 | $0: 45: 00$ |
| 5 | 293 | $0: 55: 00$ |

| 7 | 95 | $0: 40: 00$ |
| 8 | 83 | $1: 03: 00$ |
| 9 | 301 | $0: 52: 00$ |
| 10 | 201 | $0: 48: 00$ |
| Total | 3,946 | $0: 48: 00$ |

Table 5D7: S Group, Median Time from EMS Dispatch Time to Hospital ED Arrival Time by ISS groups and Quarters
In Q4 2020 (Oct-Dec), the median total time (ISS all) is one minute longer than that in Q1, Q2, and Q3.

| ISS | Q1 <br> (Jan-Mar) | Q2 <br> (Apr-Jun) | Q3 <br> (Jul-Sep) | Q4 <br> (Oct-Dec) | Total <br> (Jan-Dec) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ISS $<=15$ | $0: 54: 00$ | $0: 54: 00$ | $0: 54: 00$ | $0: 55: 00$ | $0: 55: 00$ |
| ISS $>15$ | $0: 48: 00$ | $0: 47: 00$ | $0: 47: 00$ | $0: 48: 00$ | $0: 48: 00$ |
| Median Total Time | $0: 53: 00$ | $0: 53: 00$ | $0: 53: 00$ | $0: 54: 00$ | $0: 53: 00$ |

Table 5D8: S Group, All ISS, Median Time by EMS Region and Discharge Status
The table lists the counts of patients that were discharged alive or deceased with the corresponding median time to definitive care per EMS region. Trauma patients who survived their injuries in EMS region 8 had the longest median time to definitive care (1:00:00 HH:MM:SS).
Trauma patients who died from their injuries in EMS region 1 had the longest median time to definitive care (00:53:00 HH:MM:SS). EMS Region 4 is not included due to no data reported.

| Hospital <br> Destination <br> EMS Region | Discharge <br> Status | Frequency | Median <br> Total Time |
| :---: | :---: | :---: | :---: |
| 1 | Alive | 908 | $0: 52: 00$ |
| 1 | Dead | 45 | $0: 53: 00$ |
| 2 | Alive | 1,206 | $0: 56: 00$ |
| 2 | Dead | 53 | $0: 47: 00$ |
| 3 | Alive | 8,698 | $0: 53: 00$ |
| 3 | Dead | 632 | $0: 40: 00$ |
| 5 | Alive | 1,443 | $0: 58: 00$ |
| 5 | Dead | 86 | $0: 44: 30$ |
| 6 | Alive | 1,384 | $0: 53: 00$ |
| 6 | Dead | 96 | $0: 45: 00$ |
| 7 | Alive | 361 | $0: 48: 00$ |
| 7 | Dead | 27 | $0: 37: 00$ |
| 8 | Alive | 389 | $1: 00: 00$ |
| 8 | Dead | 23 | $0: 48: 00$ |
| 9 | Alive | 1,398 | $0: 53: 00$ |
| 9 | Dead | 86 | $0: 40: 30$ |
| 10 | Alive | 1,135 | $0: 55: 00$ |
| 10 | Dead | 41 | $0: 51: 00$ |
| Total |  | 18,011 | $0: 53: 00$ |

Figure 5D9: S Group, All ISS, Median Time by EMS Region and Discharge Status
The scatter plot graph represents cumulative counts of trauma patients by the discharge status on the EMS Region lines by their median total time to definitive care. All Injury Severity Scores are represented in the graph. Trauma patients who survived their injuries in EMS region 8 had the longest median time to definitive care ( $1: 00: 00 \mathrm{HH}: \mathrm{MM}: \mathrm{SS}$ ). Trauma patients who died from their injuries in EMS region 1 had the longest median time to definitive care (00:53:00 HH:MM:SS). EMS Region 4 is not included due to no data reported.

Table 5D10: S Group, ISS <=15, Median Time by EMS Region and Discharge Status
The table lists the counts of patients that were discharged alive or deceased with the corresponding median time to definitive care per EMS region. Trauma patients with an ISS less than or equal to 15 who survived their trauma injuries in EMS region 8 had the longest median time to definitive care (1:00:00 HH:MM:SS). Trauma patients with an ISS less than or equal to 15 who died from their injuries in EMS region 10 had the longest median time to definitive care (00:57:30 HH:MM:SS). EMS Region 4 is not included due to no data reported.

| Hospital Destination EMS Region | Discharge Status | Frequency | Median <br> Total Time |
| :---: | :---: | :---: | :---: |
| 1 | Alive | 797 | 0:53:00 |
| 1 | Dead | 22 | 0:54:30 |
| 2 | Alive | 1,017 | 0:57:00 |
| 2 | Dead | 25 | 0:50:00 |
| 3 | Alive | 6,876 | 0:55:00 |
| 3 | Dead | 179 | 0:43:00 |
| 5 | Alive | 1,206 | 0:58:00 |
| 5 | Dead | 30 | 0:38:30 |
| 6 | Alive | 1,094 | 0:54:00 |
| 6 | Dead | 39 | 0:52:00 |
| 7 | Alive | 286 | 0:48:00 |
| 7 | Dead | 7 | 0:28:00 |
| 8 | Alive | 319 | 1:00:00 |
| 8 | Dead | 10 | 0:51:00 |
| 9 | Alive | 1,153 | 0:52:00 |
| 9 | Dead | 30 | 0:48:00 |
| 10 | Alive | 959 | 0:55:00 |
| 10 | Dead | 16 | 0:57:30 |
| Total |  | 14,065 | 0:55:00 |

Figure 5D11: S Group, ISS <=15, Median Time by EMS Region and Discharge Status
The scatter plot graph represents cumulative counts of trauma patients by the discharge status on the EMS Region lines by their median total time to definitive care. Trauma patients with an Injury Severity Score less than or equal to 15 are represented in the graph. Trauma patients who survived their injuries in EMS region 8 had the longest median time to definitive care (1:00:00 HH:MM:SS). Trauma patients who died from their injuries in EMS region 10 had the longest median time to definitive care (00:57:30 HH:MM:SS). EMS Region 4 is not included due to no data reported.

Table 5D12: S Group, ISS >15, Median Time by EMS Region and Discharge Status
The table lists the counts of patients that were discharged alive or deceased with the corresponding median time to definitive care per EMS region. Trauma patients with an ISS greater than 15 who survived their trauma injuries in EMS region 8 had the longest median time to definitive care (1:05:00 HH:MM:SS). Trauma patients with an ISS greater than 15 who died from their injuries in EMS region 10 had the longest median time to definitive care (00:50:00 HH:MM:SS). EMS Region 4 is not included due to no data reported.

| Hospital <br> Destination <br> EMS Region | Discharge <br> Status | Frequency | Median <br> Total Time |
| :---: | :---: | :---: | :---: |
| 1 | Alive | 111 | $0: 50: 00$ |
| 1 | Dead | 23 | $0: 46: 00$ |

| 7 | Dead | 20 | $0: 39: 30$ |
| 8 | Alive | 70 | $1: 05: 00$ |
| 8 | Dead | 13 | $0: 48: 00$ |
| 9 | Alive | 245 | $0: 55: 00$ |
| 9 | Dead | 56 | $0: 35: 30$ |
| 10 | Alive | 176 | $0: 48: 00$ |
| 10 | Dead | 25 | $0: 50: 00$ |
| Total |  | 3,946 | $0: 48: 00$ |

Figure 5D13: S Group, ISS >15, Median Time by EMS Region and Discharge Status
The scatter plot graph represents cumulative counts of trauma patients by the discharge status on the EMS Region lines by their median total time to definitive care. Trauma patients with an Injury Severity Score greater than 15 are represented in the graph. Trauma patients who survived their injuries in EMS region 8 had the longest median time to definitive care (1:05:00 HH:MM:SS). Trauma patients who died from their injuries in EMS region 10 had the longest median time to definitive care ( $00: 50: 00 \mathrm{HH}: \mathrm{MM}: S S$ ). EMS Region 4 is not included due to no data reported.

## TIME TO DEFINITIVE CARE ANALYSIS PART II

As noted earlier in this report, the second part of the time to definitive care analysis represents the cases involving the patient being referred to a second hospital for definitive trauma care. The analysis provides us with 8,252 cases ( $22.9 \%$ ) that report the patient arrived from a 'Referring Hospital', which are the original data sources for Referring Group (R Group).

## For Patients from a Referral Hospital: R Group

There are 8,252 cases reported to have arrived from a 'Referring Hospital'. Among these 8,252 cases, 8,229 cases were linked with Referring Hospital data. Among these 8,229 cases, 4,654 cases were linked with Prehospital Provider data. Among these 4,654 cases, 3,259 cases have the EMS provider's role as 'Transport from Scene to Facility'. These 3,259 cases are used for analysis for R Group time analysis.

## Time from EMS Dispatch to EMS Scene Arrival Time (Tables 6A1, 6A2, 6A3)

Among these 3,259 cases, 754 cases (23.1\%) have valid values in the four fields: EMS Dispatch Date, EMS Dispatch Time, EMS Scene Arrival Date, and EMS Scene Arrival Time. Among these 3,259 cases, 76.9\% of the cases have missing data in at least one of the four fields. The data with these 754 cases is used to calculate the median time from EMS Dispatch Time to EMS Scene Arrival Time.

## Time from EMS Scene Arrival Time to EMS Scene Departure Time (Tables 6B1, 6B2, 6B3)

Among these 3,259 cases, 748 cases (23.0\%) have valid values in the four fields: EMS Scene Arrival Date, EMS Scene Arrival Time, EMS Scene Departure Date, and EMS Scene Departure Time. Among these 3,259 cases, $\mathbf{7 7 . 0 \%}$ of the cases have missing data in at least one of the four fields. The data with these 748 cases is used to calculate the median time from EMS Scene Arrival Time to EMS Scene Departure Time.

Time from EMS Scene Departure Time to Referral Hospital Arrival Time (Tables 6C1, 6C2, 6C3) Among these 3,259 cases, 607 cases (18.6\%) have valid values in the four fields: EMS Scene Departure Date, and EMS Scene Departure Time, Referral Hospital Arrival Date, and Referral Hospital Arrival Time. Among these 3,259 cases, $\mathbf{8 1 . 4 \%}$ of the cases have missing data in at least one of the four fields. The data from the 607 cases is used to calculate the median time from EMS Scene Departure Time to Referral Hospital Arrival Time.

## Time from Referral Hospital Arrival Time to the Final Destination Hospital ED Arrival Time (Tables 6D1, 6D2, 6D3)

Among these 3,259 cases, 2,142 cases (65.7\%) have valid values in the four fields: Referral Hospital Arrival Date, Referral Hospital Arrival Time, final destination Hospital ED arrival Date, and final destination Hospital ED arrival Time. Among these 3,259 cases, 34.3\% of the cases have missing data in at least one of the four fields. The data from the 2,142 cases is used to calculate the median time from Referral Hospital Arrival Time to the final destination Hospital ED Arrival Time.

## Time from EMS Dispatch Time to the Final Destination Hospital ED Arrival Time (Tables 6E1, 6E2, 6E3)

Among these 3,259 cases, 758 cases (23.3\%) have valid values in the four fields: EMS Dispatch Date, EMS Dispatch Time, final destination Hospital ED arrival Date, and final destination Hospital ED arrival Time. Among these 3,259 cases, $76.7 \%$ of the cases have missing data in at least one of the four fields. The data from the 758 cases is used to calculate the mean and median time from EMS Dispatch Time to the final destination Hospital ED Arrival Time.

Table 6A1: R Group, All ISS, Median Time from EMS Dispatch Time to EMS Scene Arrival Time

This chart represents the median overall time (HH:MM:SS) from EMS dispatch time to EMS scene arrival time for all Injury Severity Scores. The median total time from EMS dispatch time to EMS scene arrival time is 9 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 498 | $0: 09: 00$ |
| II | 230 | $0: 08: 00$ |
| III | 26 | $0: 11: 00$ |
| Total | 754 | $0: 09: 00$ |

Table 6A3: R Group, ISS >15, Median Time from EMS Dispatch Time to EMS Scene Arrival Time

This chart represents the median overall time (HH:MM:SS) for Injury Severity Scores greater than 15 from EMS dispatch time to EMS scene arrival time. The median total time from EMS dispatch time to EMS scene arrival time is 9 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 123 | $0: 09: 00$ |
| II | 53 | $0: 09: 00$ |
| III | 6 | $0: 09: 30$ |
| Total | 182 | $0: 09: 00$ |

Table 6A2: R Group, ISS <=15, Median Time from EMS Dispatch Time to EMS Scene Arrival Time

This chart represents the median overall time (HH:MM:SS) for Injury Severity Scores less than or equal to 15 from EMS dispatch time to EMS scene arrival time. The median total time from EMS dispatch time to EMS scene arrival time is 9 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 375 | $0: 09: 00$ |

Table 6E1: R Group, All ISS, Median Time from EMS Dispatch Time to Final Destination Hospital ED Arrival Time

This chart represents the median overall time (HH:MM:SS) from EMS dispatch time to Final Destination Hospital ED arrival time for all Injury Severity Scores. The median total time from EMS dispatch time to Final Destination Hospital ED arrival time is 5 hours and 39 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 503 | $5: 36: 00$ |
| II | 229 | $6: 06: 00$ |
| III | 26 | $2: 00: 00$ |
| Total | 758 | $5: 39: 00$ |

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 364 | $3: 53: 00$ |
| II | 107 | $4: 10: 00$ |
| III | 6 | $5: 04: 30$ |
| Total | 477 | $3: 59: 00$ |

Table 6E2: R Group, ISS <=15, Median Time from EMS Dispatch Time to Final Destination Hospital ED Arrival Time

This chart represents the median overall time (HH:MM:SS) for Injury Severity Scores less than or equal to 15 from EMS dispatch time to Final Destination Hospital ED arrival time. The median total time from EMS dispatch time to Final Destination Hospital ED arrival time is 5 hours and 57 minutes.

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 379 | $5: 51: 00$ |
| II | 176 | $6: 22: 00$ |
| III | 20 | $2: 45: 00$ |
| Total | 575 | $5: 57: 00$ |

Table 6E3: R Group, ISS >15, Median Time from EMS Dispatch Time to Final Destination Hospital ED Arrival Time

This chart represents the median overall time (HH:MM:SS) for Injury Severity Scores greater than 15 from EMS dispatch time to Final Destination Hospital ED arrival time. The median total time from EMS dispatch time to Final Destination Hospital ED arrival time is 4 hours and 51 minutes. For the more severely injured patients (ISS>15), the median total time is about 66 minutes less than that of minor and moderately injured patients. (ISS<=15).

| Hospital <br> Designation <br> Level | Frequency | Median <br> Total Time |
| :---: | :---: | :---: |
| I | 124 | $4: 36: 30$ |
| II | 53 | $5: 19: 00$ |
| III | 6 | $1: 49: 30$ |
| Total | 183 | $4: 51: 00$ |

## Table 6E4: R Group, Median Time from EMS Dispatch Time to Final

 Destination Hospital ED Arrival Time In Q4 2020 (Oct-Dec), median total time (ISS all) is longer than that in Q1, Q2, and Q3.| ISS | Q1 <br> (Jan-Mar) | Q2 <br> (Apr-Jun) | Q3 <br> (Jul-Sep) | Q4 <br> (Oct-Dec) | Total <br> (Jan-Dec) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ISS $<=15$ | $6: 01: 00$ | $5: 40: 00$ | $5: 57: 30$ | $6: 01: 00$ | $5: 57: 00$ |
| ISS $>15$ | $5: 07: 00$ | $4: 45: 30$ | $4: 53: 00$ | $4: 42: 00$ | $4: 51: 00$ |
| Median Total Time | $5: 44: 00$ | $5: 25: 00$ | $5: 41: 00$ | $5: 52: 00$ | $5: 39: 00$ |

Table 6E5: R Group, All ISS, Median Time by EMS Region and Discharge Status
The table includes the counts of patients that were transferred from a referring facility to a final destination facility with the discharge status and corresponding median time to definitive care per EMS region of the final destination hospital. All Injury Severity Scores are represented in the table. Patients discharged alive at a destination hospital in EMS region 10 had the longest median time to definitive care (07:04:30 HH:MM:SS). Trauma patients who died at a destination hospital in EMS region 5 had the longest median time to definitive care (05:04:00 HH:MM:SS). Destination hospitals in EMS Regions 1, 6, 7, and 10 did not have any reported deaths during the period for the specific analysis. EMS Region 4 is not included due to no data reported.

| Hospital <br> Destination <br> EMS Region | Discharge <br> Status | Frequency | Median <br> Total Time |
| :---: | :---: | :---: | :---: |
| 1 | Alive | 7 | $1: 17: 00$ |
| 2 | Alive | 66 | $6: 12: 30$ |
| 2 | Dead | 6 | $4: 22: 00$ |
| 3 | Alive | 249 | $6: 12: 00$ |
| 3 | Dead | 15 | $4: 40: 00$ |
| 5 | Alive | 129 | $5: 51: 00$ |
| 5 | Dead | 16 | $5: 04: 00$ |
| 6 | Alive | 25 | $5: 36: 00$ |
| 7 | Alive | 2 | $4: 21: 00$ |
| 8 | Alive | 14 | $1: 55: 30$ |
| 8 | Dead | 1 | $0: 44: 00$ |
| 9 | Alive | 185 | $5: 22: 00$ |
| 9 | Dead | 11 | $2: 56: 00$ |
| 10 | Alive | 32 | $7: 04: 30$ |
| Total |  | 758 | $5: 39: 00$ |

Figure 6E6: R Group, All ISS, Median Time by EMS Region and Discharge Status
The scatter plot graph represents cumulative counts of trauma patients by the discharge status on the EMS Region lines by their median total time to definitive care. All Injury Severity Scores are represented in the graph. Trauma patients who survived their injuries in EMS region 10 had the longest median time to definitive care (07:04:30 HH:MM:SS). Trauma patients who died from their injuries in EMS region 5 had the longest median time to definitive care (05:04:00 HH:MM:SS). EMS Regions $1,6,7$, and 10 did not have any reported deaths during the period for the specific analysis. EMS Region 4 is not included due to no data reported.

Table 6E7: R Group, ISS <=15, Median Time by EMS Region and Discharge Status
The table lists the counts of patients that were discharged alive or deceased with the corresponding median time to definitive care per EMS region. Trauma patients with an ISS less than or equal to 15 who survived their trauma injuries in EMS region 10 had the longest median time to definitive care ( $07: 41: 30 \mathrm{HH}: \mathrm{MM}: \mathrm{SS}$ ). Trauma patients with an ISS less than or equal to 15 who died from their injuries in EMS region 5 had the longest median time to definitive care (06:27:00 HH:MM:SS). Destination hospitals in EMS Regions 1, 6, 7, 8, and 10 did not have any reported deaths with ISS <= 15 during the period for the specific analysis. EMS Region 4 is not included due to no data reported.

| Hospital <br> Destination <br> EMS Region | Discharge <br> Status | Frequency | Median <br> Total Time |
| :---: | :---: | :---: | :---: |
| 1 | Alive | 7 | $1: 17: 00$ |
| 2 | Alive | 51 | $5: 59: 00$ |
| 2 | Dead | 2 | $3: 57: 00$ |
| 3 | Alive | 202 | $6: 26: 30$ |
| 3 | Dead | 6 | $5: 51: 30$ |
| 5 | Alive | 102 | $6: 01: 30$ |
| 5 | Dead | 4 | $6: 27: 00$ |
| 6 | Alive | 21 | $6: 01: 00$ |
| 7 | Alive | 2 | $4: 21: 00$ |
| 8 | Alive | 9 | $1: 49: 00$ |
| 9 | Alive | 143 | $5: 27: 00$ |
| 9 | Dead | 2 | $3: 32: 30$ |
| 10 | Alive | 24 | $7: 41: 30$ |
| Total |  | 575 | $5: 57: 00$ |

Figure 6E8: R Group, ISS <=15, Median Time by EMS Region and Discharge Status
The scatter plot graph represents cumulative counts of trauma patients by the discharge status on the EMS Region lines by their median total time to definitive care. Cases with Injury Severity Scores <=15 are represented in the graph. Trauma patients who survived their injuries in EMS region 10 had the longest median time to definitive care ( $07: 41: 30 \mathrm{HH}: \mathrm{MM}: \mathrm{SS}$ ). Trauma patients who died from their injuries in EMS region 5 had the longest median time to definitive care (06:27:00 HH:MM:SS). EMS Regions $1,6,7,8$, and 10 did not have any reported deaths during the period for the specific analysis. EMS Region 4 is not included due to no data reported.

Table 6E9: R Group, ISS >15, Median Time by EMS Region and Discharge Status
The table lists the counts of patients that were discharged alive or deceased with the corresponding median time to definitive care per EMS region. Trauma patients with an ISS greater than 15 who survived their trauma injuries in EMS region 2 had the longest median time to definitive care (06:15:00 HH:MM:SS). Trauma patients with an ISS greater than 15 who died from their injuries in EMS region 5 had the longest median time to definitive care ( $04: 39: 00 \mathrm{HH}: \mathrm{MM}: \mathrm{SS}$ ). Destination hospitals in EMS Regions 6 and 10 did not have any reported deaths with ISS >15 during the period for the specific analysis. EMS Regions 1, 4, and 7 are not included due to no data reported for the specific analysis.

| Hospital <br> Destination <br> EMS Region | Discharge <br> Status | Frequency | Median <br> Total Time |
| :---: | :---: | :---: | :---: |
| 2 | Alive | 15 | $6: 15: 00$ |
| 2 | Dead | 4 | $4: 38: 30$ |
| 3 | Alive | 47 | $4: 53: 00$ |
| 3 | Dead | 9 | $4: 02: 00$ |
| 5 | Alive | 27 | $5: 37: 00$ |
| 5 | Dead | 12 | $4: 39: 00$ |
| 6 | Alive | 4 | $5: 21: 00$ |
| 8 | Alive | 5 | $2: 02: 00$ |
| 8 | Dead | 1 | $0: 44: 00$ |
| 9 | Alive | 42 | $4: 29: 30$ |
| 9 | Dead | 9 | $2: 34: 00$ |
| 10 | Alive | 8 | $4: 58: 00$ |
| Total |  | 183 | $4: 51: 00$ |

Figure 6E10: R Group, ISS >, Median Time by EMS Region and Discharge Status
The scatter plot graph represents cumulative counts of trauma patients by the discharge status on the EMS Region lines by their median total time to definitive care. Cases with Injury Severity Scores $>15$ are represented in the graph. Trauma patients who survived their injuries in EMS region 2 had the longest median time to definitive care ( $06: 15: 00 \mathrm{HH}: M M: S S$ ). Trauma patients who died from their injuries in EMS region 5 had the longest median time to definitive care (04:39:00 HH:MM:SS). Destination hospitals in EMS Regions 6 and 10 did not have any reported deaths with ISS $>15$ during the period for the specific analysis. EMS Regions 1, 4, and 7 are not included due to no data reported for the specific analysis.

# DEMOGRAPHIC 

## INFORMATION

Demographics are used to identify age groups and genders that may be at high risk for certain injuries. With this type of information, injury prevention programs can focus on the causes of injuries, a target audience, and specific regions of the state.

## Table 7: Incidents by Age

The highest fatality rate was $5.6 \%$ and fell within the age group $25-34$. It is to be noted that there were 2 deaths out of 3 not known (NK)/not recorded (NR) that accounted for a $66.7 \%$ fatality rate. Not known/Not recorded was recorded because the patient's age was unknown, undetermined, or not documented.

| Age Group | Count | Percent | Deaths | Case Fatality <br> Rate |
| :---: | :---: | :---: | :---: | :---: |
| $<1$ | 448 | 1.2 | 10 | 2.2 |
| $1-4$ | 1,061 | 2.9 | 15 | 1.4 |
| $5-9$ | 1,226 | 3.4 | 9 | 0.7 |
| $10-14$ | 1,283 | 3.5 | 21 | 1.6 |
| $15-19$ | 2,027 | 5.6 | 93 | 4.6 |
| $20-24$ | 2,551 | 7.0 | 134 | 5.3 |
| $25-34$ | 5,001 | 13.8 | 282 | 5.6 |
| $35-44$ | 3,739 | 10.3 | 165 | 4.4 |
| $45-54$ | 3,468 | 9.6 | 145 | 4.2 |
| $55-64$ | 4,121 | 11.4 | 174 | 4.2 |
| $65-74$ | 4,122 | 11.4 | 169 | 4.1 |
| $75-84$ | 4,120 | 11.4 | 210 | 5.1 |

| NK/NR | 3 | 0.0 | 2 | 66.7 |
| Total | 36,192 | 100.0 | 1,576 | 4.4 |

Figure 7A: Incidents by Age This graph represents the incident rates by age group.

Figure 7B: Case Fatality Rate by Age The case fatality rate by age group.

Table 8: Incidents and Case Fatality Rate by Age and Gender
The Incidents number of males $(22,031)$ is much higher than that of female $(14,157)$. Male Case Fatality Rate $(5.2 \%)$ is higher than female Case Fatality Rate (3.1\%). In the female population, the Case Fatality Rate in age group $25-34$ is the highest (4.1\%). In the male population, the Case Fatality Rate in age group equal or above 85 is the highest (9.3\%). Not known/Not recorded was recorded because the patient's age was unknown, undetermined, or not documented.

| Age Group | Number <br> (Female) | Number <br> (Male) | Deaths <br> (Female) | Deaths <br> (Male) | Case <br> Fatality <br> Rate <br> (Female) | Case <br> Fatality <br> Rate <br> (Male) |

## INJURY CHARACTERISTICS

Mechanism of injury or causes of injury are identified and tracked in the trauma registry. Some age groups may be identified as at risk for certain injuries such as motor vehicle crashes or falls. This information is also used to target injury prevention programs. In some cases, road improvements, pedestrian walkways and driving laws have been improved to reduce injury.

Table 12: Incidents by Mechanism of Injury
The most frequent type of injury is fall injuries, followed by motor vehicle traffic injuries and firearm injuries. Among these top three injuries, firearm injury has the highest case fatality rate (15.5\%). There were 269 records missing from the incidents of mechanism of injury due to incomplete information.

| Mechanism | Count | Percent | Deaths | Case Fatality Rate |
| :---: | :---: | :---: | :---: | :---: |
| Fall | 15,524 | 43.2 | 433 | 2.8 |
| Motor vehicle traffic | 10,583 | 29.5 | 571 | 5.4 |
| Firearm | 2,967 | 8.3 | 459 | 15.5 |

Figure 14A: Case Fatality Rate by Selected Mechanism of Injury and Age The graph represents the case fatality rates by selected mechanisms of injury and ages. Mechanism of injuries represented in this graph include fall, motor vehicle traffic, and firearm. Firearms account for highest fatality rate among these three mechanisms of injury and age.

Figure 14B: Case Fatality Rate by Selected Mechanism of Injury and Age The graph represents the case fatality rates by selected mechanisms of injury and ages. Mechanism of injuries represented in this graph include struck by, against, cut/pierce, and transport, other. For all ages, the number of case fatality rates accounted for $50 \%$ or less.

Table 15: Incidents and Case Fatality Rate by Mechanism of Injury and Gender
The table represents the rate of incidents by gender and case fatality rates for mechanisms of injury. The percent of fall injuries in female (58.1\%) is much higher than that in male (33.7\%). The percent of firearm injuries in male (11.7\%) is much higher than that in female (2.9\%). The total case fatality rate in male (5.2\%) is much higher than that in female (3.0\%).

| Mechanism | Percent (Female) | Percent <br> (Male) | Case <br> Fatality <br> Rate (Female) | Case <br> Fatality Rate (Male) |

| Adverse effects, medical care | 0.0 | 0.0 | 0.0 | 0.0 |
| Poisoning | 0.0 | 0.0 | 100.0 | 0.0 |
| Total | 100.0 | 100.0 | 3.0 | 5.2 |

Figure 15A: Percentage of Incidents by Selected Mechanism of Injury and Gender
The graph represents the percentage rate of incidents by select mechanisms of injury and gender.

Figure 15B: Case Fatality Rate by Selected Mechanism of Injury and Gender The graph represents the case fatality rate by select mechanisms of injury and gender.

Table 16: Incidents and Case Fatality Rate by Injury Severity Score (ISS)
The table represents the case fatality rate by injury severity score. Minor injuries (44.8\%) and moderate injuries (38.9\%) account for 83.7 percent of all the injuries. Patients with severe injuries with an ISS greater than 24 have the highest case fatality rate (42.3\%).

| ISS | Number | Percent | Deaths | Case Fatality <br> Rate (\%) |
| :---: | :---: | :---: | :---: | :---: |
| $1-8$ | 15,517 | 44.8 | 202 | 1.3 |
| $9-15$ | 13,458 | 38.9 | 303 | 2.3 |
| $16-24$ | 3,717 | 10.7 | 282 | 7.6 |
| $>24$ | 1,860 | 5.4 | 787 | 42.3 |
| NK/NR | 64 | 0.2 | 2 | 3.1 |
| Total | 34,616 | 100.0 | 1,576 | 4.6 |

Figure 16A: Case Fatality Rate by Injury Severity Score (ISS)
The graph represents the case fatality rate by injury severity score. Minor injuries (44.8\%) and moderate injuries ( $38.9 \%$ ) account for 83.7 percent of all the injuries. Patients with severe injuries with an ISS greater than 24 have the highest case fatality rate (42.3\%).

Table 17: Incidents by Injury Severity Score (ISS) and Age
The table represents the incidents by injury severity score and age. The largest number (516) of very severe injuries (ISS $>24$ ) is in age group 25-34.

| Age | ISS 1-8 | ISS 9-15 | ISS 16-24 | ISS > 24 | ISS NK/NR | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $<1$ | 179 | 206 | 46 | 16 | 1 | 448 |
| $1-4$ | 706 | 273 | 51 | 30 | 1 | 1,061 |
| $5-9$ | 938 | 224 | 39 | 24 | 1 | 1,226 |
| $10-14$ | 842 | 304 | 83 | 53 | 1 | 1,283 |
| $15-19$ | 971 | 649 | 220 | 186 | 1 | 2,027 |
| $20-24$ | 1,079 | 848 | 349 | 269 | 6 | 2,551 |
| $25-34$ | 2,333 | 1,478 | 661 | 516 | 13 | 5,001 |
| $35-44$ | 1,697 | 1,235 | 492 | 306 | 9 | 3,739 |

| $>=85$ | 2.5 | 3.5 | 10.2 | 27.7 | 0.0 | 4.9 |
| NK/NR | 100.0 | 0.0 | 0.0 | 100.0 | 0.0 | 66.7 |
| Total | 1.3 | 2.2 | 7.1 | 29.7 | 3.0 | 4.4 |

Figure 18: Case Fatality Rate by Injury Severity Score (ISS) and Age
The graph represents the case fatality rate by injury severity score and age. Points on the line added together in the age ranges represent the counts seen in Table 18.

Table 19: Incidents and Case Fatality Rate by Work-Related Injury
The table represents work-related injuries by frequency and fatality rate. In 2020, there were 1,220 confirmed work-related injuries, which account for $3.4 \%$ of all trauma injuries. The case fatality rate for the confirmed work-related injuries is $2.6 \%$.

| Work-Related <br> Injury | Number | Percent | Deaths | Case Fatality <br> Rate |
| :---: | :---: | :---: | :---: | :---: |
| False | 34,896 | 96.4 | 1,541 | 4.4 |
| True | 1,220 | 3.4 | 32 | 2.6 |
| Unknown | 76 | 0.2 | 3 | 3.9 |
| Total | 36,192 | 100.0 | 1,576 | 4.4 |

Figure 19A: Case Fatality Rate by Work-Related Injury
The graph represents the case fatality rate of work-related injuries. The case fatality rate of the unconfirmed work-related injuries seems significant; however, the patient ratio 3:76 is lower than the other two segments.

## Table 20: Incidents and Case Fatality Rate by Intent

The table represents the frequency and case fatality rate of injuries by the intent of the injury. Most of the injuries are unintentional injuries (86.5\%). Assault injuries account for $10.7 \%$ of all the injuries. The case fatality rate of self-inflicted is the highest (24.9\%). The number of records missing data is 43 . These records are not counted in the total.

| Intent | Number | Percent | Deaths | Case Fatality <br> Rate |
| :---: | :---: | :---: | :---: | :---: |
| Unintentional | 31,262 | 86.5 | 1,081 | 3.5 |
| Assault | 3,875 | 10.7 | 313 | 8.1 |
| Undetermined | 504 | 1.4 | 58 | 11.5 |
| Self-inflicted | 457 | 1.3 | 114 | 24.9 |
| Other | 51 | 0.1 | 8 | 15.7 |
| Total | 36,149 | 100.0 | 1,574 | 4.4 |

Figure 20A: Case Fatality Rate by Intent
The graph represents the case fatality rate of injuries by the intent. The case fatality rate of self-inflicted is the highest (24.9\%).

Table 21: Incidents and Case Fatality Rate by the Top 40 Places of Injury The table represents the frequency and case fatality rate of injuries by the location of the injury. The documented location with the highest frequency is unspecified. The highest number of deaths (263) resulted from injuries that occurred on a local resident or business street. The unspecified place is used by registrars when inadequate documentation is available.

| ICD10 Injury Place | Number | Percent | Deaths | Case Fatality Rate |
| :---: | :---: | :---: | :---: | :---: |
| Unspecified place or not applicable | 5,066 | 14.0 | 119 | 2.3 |
| Local residential or business street | 4,415 | 12.2 | 263 | 6.0 |
| Unspecified street and highway | 3,513 | 9.7 | 142 | 4.0 |
| Unspecified place in single-family (private) house | 2,549 | 7.0 | 118 | 4.6 |
| Unspecified place in unspecified noninstitutional (private) residence | 1,810 | 5.0 | 67 | 3.7 |
| State road | 1,581 | 4.4 | 129 | 8.2 |
| Other place in single-family (private) house | 1,297 | 3.6 | 69 | 5.3 |
| Interstate highway | 1,191 | 3.3 | 70 | 5.9 |
| Garden or yard in single-family (private) house | 1,153 | 3.2 | 50 | 4.3 |
| Other place in unspecified noninstitutional (private) residence | 756 | 2.1 | 17 | 2.2 |
| Bedroom of singlefamily (private) house | 716 | 2.0 | 47 | 6.6 |
| Garden or yard of unspecified noninstitutional (private) residence | 669 | 1.8 | 8 | 1.2 |
| Bathroom of singlefamily (private) house | 620 | 1.7 | 35 | 5.6 |

| Unspecified place in nursing home | 608 | 1.7 | 21 | 3.5 |
| :---: | :---: | :---: | :---: | :---: |
| Parking lot | 532 | 1.5 | 44 | 8.3 |
| Bedroom of unspecified noninstitutional (private) residence | 472 | 1.3 | 7 | 1.5 |
| Kitchen of singlefamily (private) house | 471 | 1.3 | 14 | 3.0 |
| Unspecified place in apartment | 410 | 1.1 | 24 | 5.9 |
| Bedroom in nursing home | 395 | 1.1 | 14 | 3.5 |
| Private driveway to single-family (private) house | 376 | 1.0 | 23 | 6.1 |
| Unspecified place in prison | 374 | 1.0 | 5 | 1.3 |
| Other trade areas | 371 | 1.0 | 24 | 6.5 |
| Other specified places | 343 | 0.9 | 10 | 2.9 |
| Bathroom of unspecified private residence singlefamily or house | 340 | 0.9 | 7 | 2.1 |
| Parkway | 271 | 0.7 | 24 | 8.9 |
| Other recreation area | 259 | 0.7 | 3 | 1.2 |
| Kitchen of unspecified noninstitutional (private) residence | 252 | 0.7 | 8 | 3.2 |
| Other paved roadways | 250 | 0.7 | 9 | 3.6 |
| Sidewalk | 250 | 0.7 | 6 | 2.4 |
| Other place in apartment | 208 | 0.6 | 11 | 5.3 |
| Unknown | 207 | 0.6 | 4 | 1.9 |

| Other specified industrial and construction area | 191 | 0.5 | 5 | 2.6 |
| :---: | :---: | :---: | :---: | :---: |
| Restaurant or cafe | 186 | 0.5 | 8 | 4.3 |
| Other wilderness area | 185 | 0.5 | 5 | 2.7 |
| Private garage of single-family (private) house | 174 | 0.5 | 10 | 5.7 |
| Gas station | 168 | 0.5 | 16 | 9.5 |
| Building [any] under construction | 163 | 0.5 | 5 | 3.1 |
| Supermarket, store or market | 160 | 0.4 | 10 | 6.3 |
| Other specified sports and athletic area | 159 | 0.4 | 2 | 1.3 |
| Bathroom in nursing home | 149 | 0.4 | 8 | 5.4 |

Table 22: Incidents by AIS Severity and Case Fatality Rate
The table represents the frequency of injury severity by fatality rate. Patients with the maximum AIS severity have the highest case fatality rate (84.0\%)

| AIS Severity | Number | Percent | Deaths | Case Fatality <br> Rate \% |
| :---: | :---: | :---: | :---: | :---: |
| Maximum | 75 | 0.2 | 63 | 84.0 |
| Critical | 1,663 | 4.6 | 602 | 36.2 |
| Severe | 2,624 | 7.3 | 277 | 10.6 |
| Serious | 14,369 | 39.8 | 407 | 2.8 |
| Moderate | 13,379 | 37.0 | 106 | 0.8 |
| Minor | 4,016 | 11.1 | 119 | 3.0 |
| Total | 36,126 | 100.0 | 1,574 | 4.4 |

Figure 22A: Incidents by AIS Severity
The graph represents the frequency of injuries by the severity levels. Most injuries were considered serious.

Figure 22B: Case Fatality Rate (\%) by AIS Severity
The graph represents the frequency of death from trauma injuries. Patients with the maximum AIS severity have the highest case fatality rate (84\%).

## Table 23: Incidents by ISS Body Region and Discharge Status

The table represents the frequency of injuries by the ISS body regions with the case fatality rate for each body region. If a patient has multiple injured body regions, only one region with the highest AIS severity is counted. Patients with the highest AIS severity in the head or neck region have the highest case fatality rate (8.9\%).

| ISS Body <br> Region | Number | Percent | Deaths | Case Fatality <br> Rate \% |
| :---: | :---: | :---: | :---: | :---: |
| Extremities or <br> Pelvic Girdle | 14,764 | 40.9 | 211 | 1.4 |
| Head or Neck | 8,310 | 23.0 | 738 | 8.9 |
| Chest | 5,669 | 15.7 | 318 | 5.6 |
| External | 3,187 | 8.8 | 161 | 5.1 |
| Abdominal or <br> Pelvic <br> Contents | 2,702 | 7.5 | 138 | 5.1 |
| Face | 1,494 | 4.1 | 8 | 0.5 |
| Total | 36,126 | 100.0 | 1,574 | 4.4 |

Figure 23A: Incidents by ISS Body Region
The graph represents the frequency of injuries by ISS body region. Most injuries occur in the extremities or pelvic girdle ISS body region, which correlates to the most frequent mechanism of injury, falls and MVC.

Figure 23B: Incidents by Case Fatality Rate and ISS Body Region
The graph represents the case fatality rate by ISS body region. Most fatalities involve an injury to the head or neck region which could be caused by a firearm, MVC, or fall. See Figure 15B for fatal MOI detail.

## Table 24: Incidents by Protective Devices

The table displays the frequency of protective device use by injured patients. Case fatality rate is highest in the head neck region. MCC or bicycle injuries represent \% of the total patients. Helmets are reported as used in only $5 \%$ of the injured patients.

| Protective Device | Frequency | Percent |
| :---: | :---: | :---: |
| None | 29,198 | 80.7 |
| Not Applicable | 4,685 | 12.9 |
| Helmet | 1,810 | 5.0 |
| Unknown | 420 | 1.2 |
| Protective Clothing | 31 | 0.1 |
| Other | 23 | 0.1 |
| Protective Non-Clothing Gear (e.g., <br> Shin Guard, Padding) | 10 | 0.0 |
| Eye Protection | 8 | 0.0 |
| Personal Floatation Device | 5 | 0.0 |
| Hard Hat | 2 | 0.0 |
| Total | 36,192 | 100.0 |

## OUTCOMES INFORMATION

Outcome measurements describe the results of intervention and management of injuries. Positive patient outcomes result from an effective and efficient system of care.

Table 25: Median Length of Stay (LOS) in Days by Mechanism of Injury (MOI) The table represents the frequency of the mechanisms of injury for patients and the median length of stay in days for each mechanism. Patients with a suffocation MOI have the highest median LOS of 8 days.

| Mechanism of Injury | Frequency | Median Days |
| :---: | :---: | :---: |
| Fall | 14,501 | 4 |
| Motor vehicle traffic | 9,622 | 3 |
| Firearm | 2,455 | 3 |
| Struck by, against | 1,570 | 2 |
| Cut/pierce | 1,389 | 2 |
| Transport, other | 924 | 2 |
| Pedal cyclist, other | 461 | 2 |
| Other specified and classifiable | 418 | 1 |
| Natural/environmental, Bites and stings | 224 | 1 |
| Machinery | 212 | 1 |
| Pedestrian, other | 164 | 3 |
| Natural/environmental, Other | 117 | 2 |
| Unspecified | 85 | 2 |
| Overexertion | 82 | 2 |
| Other specified, not elsewhere classifiable | 70 | 2 |
| Fire/flame | 41 | 1 |
| Hot object/substance | 24 | 1 |
| Suffocation | 5 | 8 |
| Drowning/submersion | 3 | 1 |

Figure 25: Median Length of Stay (LOS) in Days by Selected Mechanisms of Injury
The graph displays the top eight frequent mechanisms of injury with the median length of stay. Note that table 25 contains other mechanisms of injury with the same LOS in days as the graph displays. Not seen in the graph due to the low frequency are patients with suffocation MOI. The five patients who experienced a suffocation injury have the highest median LOS of 8 days.

Table 26: Median Length of Stay (LOS) in Days by Injury Severity Score
The median length of stay increases as the injury severity score increases. Records with a blank ISS entry are omitted.

| Injury Severity Score | Frequency | Median Days |
| :---: | :---: | :---: |
| $1-8$ | 13,178 | 2 |
| $9-15$ | 13,178 | 4 |
| $16-24$ | 3,813 | 6 |
| $>24$ | 2,404 | 9 |
| NK/NR | 48 | 1 |

Figure 26: Median Length of Stay (LOS) in Days by Injury Severity Score The graph displays the median length of stay in days by injury severity score groups.

Table 27: Median Ventilator Days by Mechanism of Injury (MOI)
The table represents the admitted trauma patients with ventilator days greater than zero. Patients with Pedal cyclist, Natural/environmental other, and Natural/environmental Bites and stings injuries have the highest median ventilator days.

| Mechanism of Injury | Frequency | Median Ventilator <br> Days |
| :---: | :---: | :---: |
| Motor vehicle traffic | 1,487 | 4 |
| Fall | 780 | 4 |
| Firearm | 565 | 2 |
| Struck by, against | 96 | 4 |
| Cut/pierce | 94 | 2 |
| Transport, other | 67 | 3 |
| Other specified and classifiable | 21 | 2 |
| Pedal cyclist, other | 17 | 6 |
| Pedestrian, other | 17 | 4 |
| Unspecified | 17 | 4 |
| Other specified, not elsewhere classifiable | 15 | 3 |
| Natural/environmental, Other | 12 | 5 |
| Fire/flame | 10 | 2 |
| r |  |  |

| Machinery | 8 | 3 |
| :---: | :---: | :---: |
| Natural/environmental, Bites and stings | 7 | 6 |
| Suffocation | 6 | 2 |
| Drowning/submersion | 1 | 1 |
| Hot object/substance | 1 | 2 |

Figure 27: Median Ventilator Days by Selected Mechanism of Injury The graph displays the median ventilator days by the top nine mechanism of injury.

Table 28: Median Ventilator Days by Injury Severity Score (ISS)
The table represents the frequency of patients within the same ISS group and the median ventilator days. Patients with an ISS greater than 16 were on the ventilator for the same number of median days.

| Injury Severity Score | Frequency | Median Ventilator <br> Days |
| :---: | :---: | :---: |
| $1-8$ | 353 | 2 |
| $9-15$ | 659 | 3 |
| $16-24$ | 830 | 4 |
| $>24$ | 1,408 | 4 |
| NK/NR | 2 | 2 |

Figure 28: Median Ventilator Days by Injury Severity Score (ISS)
The graph displays the median ventilator days by injury severity score. The higher the ISS the longer patients required the ventilator.

## Table 29: Median ICU Days by Mechanism of Injury

The table represents inpatients with Intensive Care Unit (ICU) days $>0$. Patient with fire/flame, suffocation, and other specified injuries, not elsewhere classifiable injuries have the highest median ICU days of 5 days.

| Mechanism of Injury | Frequency | Median ICU Days |
| :---: | :---: | :---: |
| Fall | 3,218 | 3 |
| Motor vehicle traffic | 3,190 | 4 |
| Firearm | 899 | 4 |
| Struck by, against | 322 | 3 |
| Cut/pierce | 241 | 3 |
| Transport, other | 230 | 3 |
| Pedal cyclist, other | 86 | 3 |
| Other specified and classifiable | 66 | 2 |
| Pedestrian, other | 47 | 4 |
| Machinery | 32 | 3 |
| Unspecified | 27 | 4 |
| Natural/environmental, Other | 21 | 3 |
| Other specified, not elsewhere classifiable | 19 | 5 |
| Natural/environmental, Bites and stings | 9 | 5 |
| Fire/flame | 5 | 4 |
| Suffocation | 4 | 2 |
| Overexertion | 1 | 3 |
| Hot object/substance |  | 3 |

Figure 29: Median ICU Days by Selected Mechanism of Injury
The graph displays the top eight most frequent mechanisms of injury with their respective median number of ICU days.

Table 30: Median ICU Days by Injury Severity Score (ISS)
The table represents the median ICU days by injury severity group. The median ICU days increase with injury severity scores.

| Injury Severity Score | Frequency | Median ICU Days |
| :---: | :---: | :---: |
| $1-8$ | 1,328 | 2 |
| $9-15$ | 2,893 | 3 |
| $16-24$ | 2,255 | 4 |
| $>24$ | 2,024 | 6 |
| NK/NR | 5 | 4 |

Figure 30: Median ICU days by Injury Severity Score
The graph displays the median ICU days for all trauma registry patients. As expected, patients with higher ISS experienced more ICU days.

## Table 31: Incidents by ED Discharge Disposition

The table represents the frequency of ED Dispositions. Less than half of the ED Dispositions were to a Floor Bed (45.5\%). Of the 36,189 trauma registry cases, the Emergency Department (ED) disposition mortality rate was $1.7 \%$, representing 618 lives lost. The frequency missing is equal to 3 .

| ED Disposition | Frequency | Percent |
| :---: | :---: | :---: |
| Floor Bed (General Admission, Non-Specialty Unit Bed) | 16,477 | 45.5 |
| Intensive Care Unit (ICU) | 6,045 | 16.7 |
| Operating Room | 5,845 | 16.2 |
| Home without Services | 2,540 | 7.0 |
| Transferred to Another Hospital | 1,787 | 4.9 |
| Observation Unit (Unit that Provides LT 24 Hour Stays) | 1,134 | 3.1 |
| Telemetry/Step-Down Unit (Less Acuity than ICU) | 982 | 2.7 |
| Died/Expired | 618 | 1.7 |
| Not Applicable | 469 | 1.3 |
| Left Against Medical Advice | 138 | 0.4 |
| Other (Jail, Institutional Care, Mental Health, etc.) | 83 | 0.2 |
| Burn Center | 60 | 0.2 |
| Home with Services | 11 | 0.0 |
| Total | 36,189 | 100.0 |

## Table 32: Incidents by Signs of Life

The table represents the frequency of patients arriving to the trauma center with and without signs of life. Most patients ( $85.6 \%$ ) arrived with signs of life. The frequency of missing data is equal to 2 .

| Signs of Life | Frequency | Percent |
| :---: | :---: | :---: |
| Arrived with Signs of Life | 30,972 | 85.6 |
| Not Applicable | 4,815 | 13.3 |
| Arrived with No Signs of Life | 402 | 1.1 |
| Unknown | 1 | 0.0 |
| Total | 36,190 | 100.0 |

## Table 33: Frequency of Hospital Discharge Disposition

The table represents the hospital discharge disposition of 36,192 trauma registry cases. The hospital mortality rate was $3.3 \%$, representing 1,179 lives lost.

| Hospital Discharge Disposition | Frequency | Percent |
| :---: | :---: | :---: |
| Discharged Home with No Home Services | 20,646 | 57.0 |
| Discharge/Transferred to Home Under Care of <br> Organized Home Health Service | 2,813 | 7.8 |
| Discharged/Transferred to Inpatient Rehab or <br> Designated Unit | 2,680 | 7.4 |
| Discharged/Transferred to Skilled Nursing Facility (SNF) | 2,581 | 1,313 |
| Discharged/Transferred to a Short-Term General | 1,1 |  |
| Hospital for Inpatient Care | 3.6 |  |
| Dispired | 1,179 | 474 |
| Left Against Medical Advice or Discontinued Care | 401 | 1.3 |

## APPENDIX 1

2020
TRAUMA CENTERS AND SPECIALTY CARE CENTERS IN GEORGIA WITHIN EMS REGIONS

## APPENDIX 2

## 2020 ANNUAL TRAUMA REGISTRY INCLUSION CRITERIA

## Georgia Trauma Registry Inclusion Criteria

## Any patient presenting with a traumatic injury occurring within 14 days of initial hospital visit and with an ICD-10_CM diagnosis code below:

o S00-S99 w/ 7th character modifiers of A, B, or C. (see exclusions)

- T07 (unspecified multiple injuries)
- T14 (injury of unspecified body region)
o T20-T28 with 7th character A only or T30-T32 (patient must also have a non-burn trauma diagnosis)*
o T79.A1 - T79.A9 w/ 7th character modifier A (Traumatic Compartment Syndrome - initial diagnosis)

## EXCLUDING patients with isolated injuries:

o Diagnosis codes of ICD-10-CM superficial injuries: S00, S10, S20, S30, S40, S50, S60, S70, S80, S90
o Late effect codes w/ the 7th character modifier of D through S
o Patients $w /$ isolated burn injuries T20-T28 w/7th modifier A or T30-T32*
o Patients admitted for elective and/or planned surgical intervention
o Patients w/ injuries older than 14 days from first ED arrival date

## AND must include one of the following in addition to a valid trauma diagnosis code from the listed above

o Admitted to the hospital after discharge from the ED, regardless of length of stay
o Transferred to or from another acute care facility
o Died, regardless of length of stay
o DOA: defined as a patient that died from a traumatic injury before hospital arrival

## Additional criteria/notes:

o The Georgia data collection standard for blood utilization includes data for any blood products administered within the first 4 hours from the patient arrival time.
o Unplanned readmissions must be associated with the initial trauma injury, have a trauma diagnosis, ISS total, and be readmitted within 72 hours of discharge from the first visit.
o *Indicates a difference between the Georgia Criteria and the NTDS Criteria
o The ICD-9 codes were retired 01/01/2017.
o Per the Centers for Medicare and Medicaid Services, Acute Care Hospital is defined as a hospital capable of providing inpatient medical care with services for surgery, acute medical conditions or injuries.
