Georgia Board of Public Health

April 8, 2025

Agenda

- Call to Order
- Roll Call
- Approval/Adoption of Minutes
- New Business
 - Opening Remarks Kathleen E. Toomey, M.D., M.P.H.
 - Epidemiology Update Cherie Drenzek, DVM, MS
 - Legislative Updates Graham Segrest
 - Environmental Health/Food Service Inspection Program Galen Baxter,
 REHS, LSSGB
- Board Comments
- Adjournment

Commissioner's Remarks

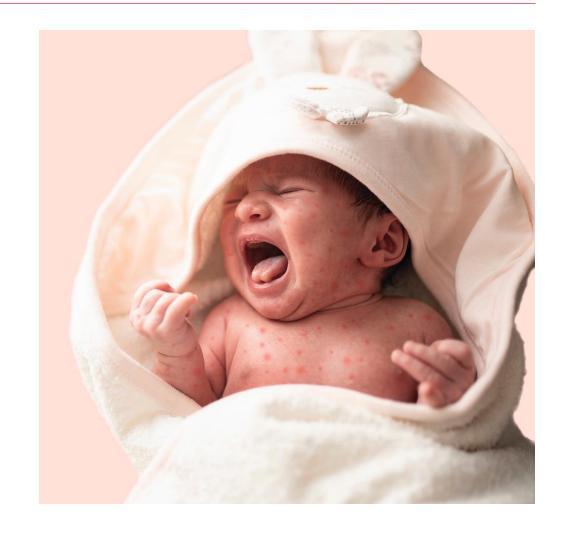

Board of Public Health Meeting / Kathleen E. Toomey, M.D., M.P.H. / April 8, 2025

Epidemiology Update: Measles

Board of Public Health Meeting / Cherie L. Drenzek, DVM, MS / April 8, 2025

Measles Background

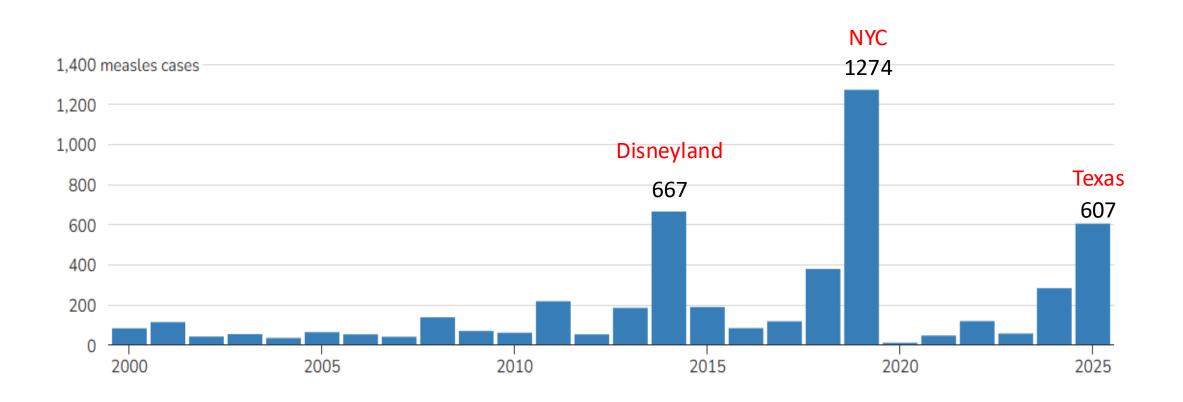

- Measles is viral illness characterized by fever, rash, and the 3 Cs (cough, coryza, and conjunctivitis)
- Unique among infectious diseases in that it is considered one of the most **highly contagious** of all.
 - Spreads when an infected person coughs or sneezes
 - Contagious 4 days <u>before</u> through 4 days <u>after</u> rash develops
 - Remains in the air or on surfaces for up to 2 hours
 - Attack rate 90% among susceptible contacts
 - Incubation period 7-21 days
- However, is also highly preventable with MMR vaccine (2 doses are 97% effective)

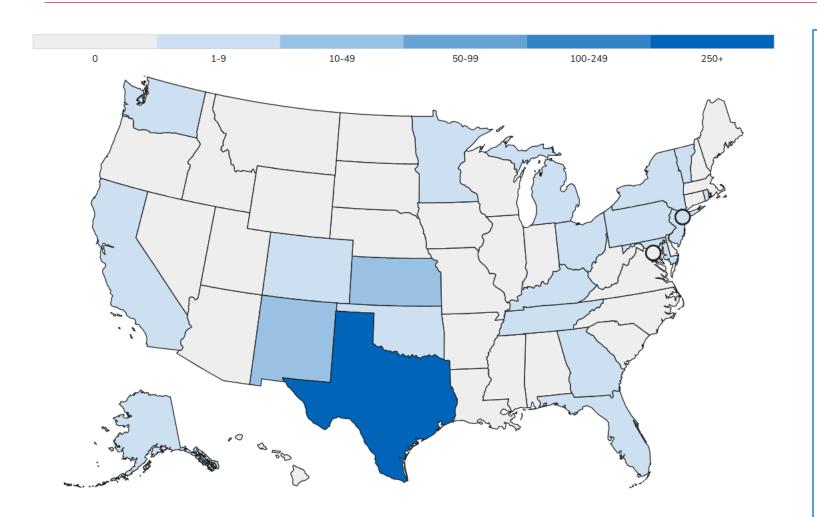

Current Measles Landscape

- Considered "eliminated" from the United States in 2000
- The epidemiology of measles is changing drastically, sharply increasing both globally and in the U.S.
- Nationally, the first quarter of 2025 had more measles cases (607) than all of 2024 (285), with 3 deaths.
- Driven by a huge outbreak among an unvaccinated religious community in western Texas (481 cases) that has spilled over to New Mexico (54 cases) and Kansas (24 cases).
- <u>Epi pattern</u>: Most cases and outbreaks in the US now are related to international travel/travelers, followed by further spread in the U.S. among pockets of under- or unvaccinated people.

Measles Cases in the US, 2000-2025

Measles in 2025: National Data

As of April 4, 2025

National Cases: 607

Age

Under 5 years: **196 (32%)**

5-19 years: **240 (40%)**

20+ years: **159 (26%)**

Age unknown: 12 (2%)

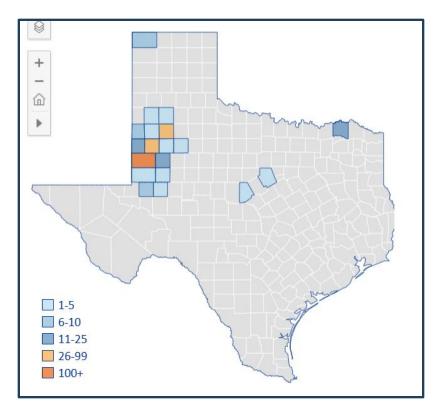

Vaccination Status

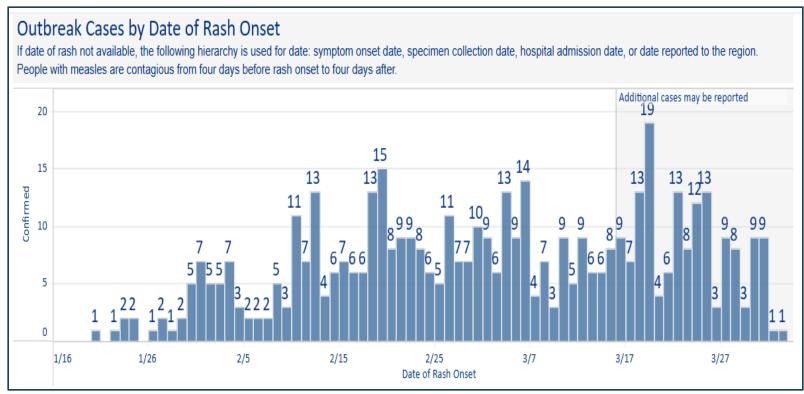

Unvaccinated or Unknown: 97%

One MMR dose: **1%** Two MMR doses: **2%**

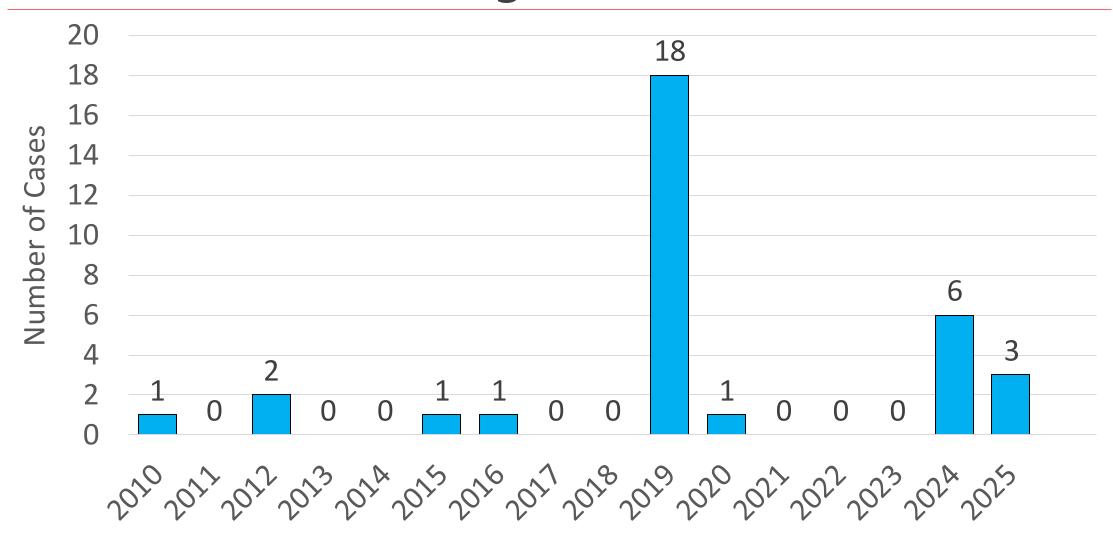

Deaths: 3

Texas Measles Outbreak, 2025

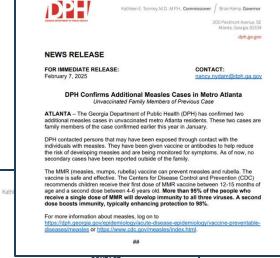

Measles Cases, Georgia 2010-2025*

Measles Cases, Georgia, January 2025

- In January 2025, the Georgia Public Health Laboratory (GPHL) confirmed measles in an unvaccinated resident of metro Atlanta who had traveled within the United States.
- Two unvaccinated family members were also diagnosed with measles (both had also traveled with the first case).
- Measles cases are public health emergencies warranting immediate investigation.
- Goals of the investigation were to identify and monitor contacts, offer MMR or IG if susceptible, and stop spread. No secondary cases.

Kathleen E. Toomey, M.D., M.P.H., Commissioner | Brian Kemp, Governor

NEWS RELEASE

FOR IMMEDIATE RELEASE: January 28, 2025

nancy.nydam@dph.ga.gov

DPH Confirms Measles Case in Metro Atlanta MMR Vaccine is Safe and Effective in Preventing Measles

ATLANTA - The Georgia Department of Public Health (DPH) has confirmed a measles case in an unvaccinated metro Atlanta resident. DPH is working to identify any persons that may have been exposed through contact with the individual between Jan. 19-24, 2025 when they were infectious. The individual acquired the virus while traveling within the United States.

Measles is very contagious and spreads through the air when an infected person coughs or sneezes. Measles virus can stay in the air or on surfaces for up to two hours after an infected person has left the room.

Measles symptoms appear 7 to 14 days after contact with the virus, typically including high fever, cough, runny nose, and watery eyes. Then, a rash of tiny, red spots breaks out. It starts at the head and spreads to the rest of the body.

The MMR (measles, mumps, rubella) vaccine can prevent measles and rubella. The vaccine is safe and effective. The Centers for Disease Control and Prevention (CDC) recommends children receive their first dose of MMR vaccine between 12-15 months of age and a second dose between 4-6 years old. More than 95% of the people who receive a single dose of MMR will develop immunity to all three viruses. A second dose boosts immunity, typically enhancing protection to 98%.

Are there different prevention recommendations during the current Texas outbreak?

- Not different, but unvaccinated persons should be vaccinated
- In general, in the U.S., immunity testing or additional doses of MMR vaccine are not needed for most adults.
- However, "under-vaccinated" <u>residents or travelers</u> to areas with ongoing, community-wide measles transmission (like West Texas) may consider an additional or early dose of MMR:
 - A second dose of MMR vaccine for adults who received one prior dose
 - A second dose of MMR vaccine for preschool-aged children aged 1 to 4
 years who received one prior dose
 - An early dose of MMR vaccine for infants aged 6–11 months

Measles: Take Home Messages

- Most measles cases and outbreaks in the US are related to international travel/travelers, followed by further spread here among pockets of unvaccinated people.
- Because of the changing epidemiology of measles, we will continue to be at risk for measles importations and outbreaks
- Still, the risk of widespread measles is very low in the United States due to high childhood vaccination rates with MMR and adult immunity.
- MMR vaccination remains the best protection against measles.
- Healthcare providers should consider measles in the differential for febrile rash illnesses and should notify/report to DPH immediately at 1-866-PUB-HLTH.

Georgia Healthcare Providers

Should I Test For Measles? A Guide for Georgia Healthcare Providers

Do you suspect your patient has measles? Immediately mask and isolate the patient per airborne precautions* and check immunization status.

In the 21 days prior to onset of illness, has patient had any of the following:

- Known exposure to a person with measles?
- · International travel, contact with an international traveler, been to an international airport or places popular with international visitors in the US?
- · Attended or visited events/places with large gatherings?
- · Resided in or visited a US community with measles cases? Current listings at cdc.gov/measles/data-research/index.html

If NO to all, measles is very unlikely, testing is not required.

If YES to any, continue

STEP 2 **ISOLATE**

STEP 3

INFORM

Has the patient had a combination of:

- And one or more of: COUGH, CONJUNCTIVITIS, or RUNNY NOSE And RASH[†]
- Red-brown macules or papules, may become confluent patches
- Begins on face and progresses to the rest of the body
- Typically appears within a few days after other symptoms begin

CALL 866-PUB-HLTH (866-782-4584)

COLLECT specimens for viral and serologic testing:

- · Collect 7-10 ml of blood in a red top or serum separator tube
- · Urine (10-15 ml) in sterile container
- · Throat swabs use viral transport kit, if possible.

DO NOT refer the patient to another facility without first contacting that facility to prevent additional exposures. Contact the facility first, then notify Georgia DPH.

Place patient in a negative pressure room when available; if not, examine the patient outside the facility or in a private room with the door closed; minimize the time patient

Immunization in last month with MMR or MMRV can be a cause of measles-like rash check immunization history. Testing is not indicated if immunized against measles in last month and answer is no to all questions in Step 1.

Measles is unlikely, testing is

As needed, call Georgia DPH for consultation.

Contact Georgia DPH 24/7 1-866-PUB-HLTH (1-866-782-4584)

Legislative Update: 2025 Session

Board of Public Health Meeting / Graham Segrest / April 8, 2025

Agency Legislation

House Bill 89

Regional Perinatal Centers

- Requires healthcare providers, healthcare facilities, and pharmacies to provide the Maternal Mortality Review Committee with psychiatric records;
- Establishes the Regional Perinatal Center Advisory Committee with its composition and duties; and
- Removes the requirement that a medical examiner's inquiry for pregnant female deaths be done through a regional perinatal center.

Direct Impact Legislation

House Bill 567

Teledentistry

- Authorizes and regulates teledentistry by licensed dentists in this state;
 and
- Provides for a limited number of dental hygienists to perform teledentistry under certain conditions; and
- Allows for coverage of dental services provided through teledentistry.

House Bill 398

Cottage Foods

SUMMARY

 Authorizes the production and sale of cottage food items with certain exemptions, requirements, and disclosures

Government Serves the People Act

- Improves government service delivery in the state of Georgia; and
- Establish the heads of each state agency as responsible for the government service delivery of their agency.

Georgia Transporting Life-Saving Organs and Personnel Act

- Provides for the licensing and operation of emergency organ transport vehicles as ambulance services; and
- Exempts emergency organ transport vehicles from requirements relative to the Emergency Medical Systems Communications Program and a medical adviser.

Removal of Boards and Commissions

- Modernize and update provisions creating certain boards, panels, authorities, centers, commissions, three committees, councils, task forces, and other such bodies.
- This bill provides for repeal for various Boards and Commissions, including the Georgia Council on Lupus Education and Awareness and the Georgia Palliative Care and Quality of Life Advisory Council.

Andee's Law

SUMMARY

• Provides for the issuance of a copy of the original birth certificate to certain adult persons who were adopted.

House Resolution 847

House Study Committee on Evaluating Funding for Public Health

SUMMARY

 A committee to study how the public health system is structured and funded and to evaluate what services such system currently provides to determine whether additional action by the state is necessary.

House Resolution 72

House Study Committee on Cancer Care Access

SUMMARY

• A study committee to evaluate and make recommendations for the improved access to quality cancer care in Georgia.

Food Service Program

Board of Public Health Meeting / Galen C. Baxter, REHS / April 8, 2025

Food Service Program Overview

MISSION: To minimize food-borne related illnesses.

- Regulation and Routine Inspections of over 42,000 food service establishments
- Investigation of food-borne related complaints and illnesses
- Education and training for Environmental Health Specialists (EHS); food service operators and managers; general public

Shared Food Safety Inspections

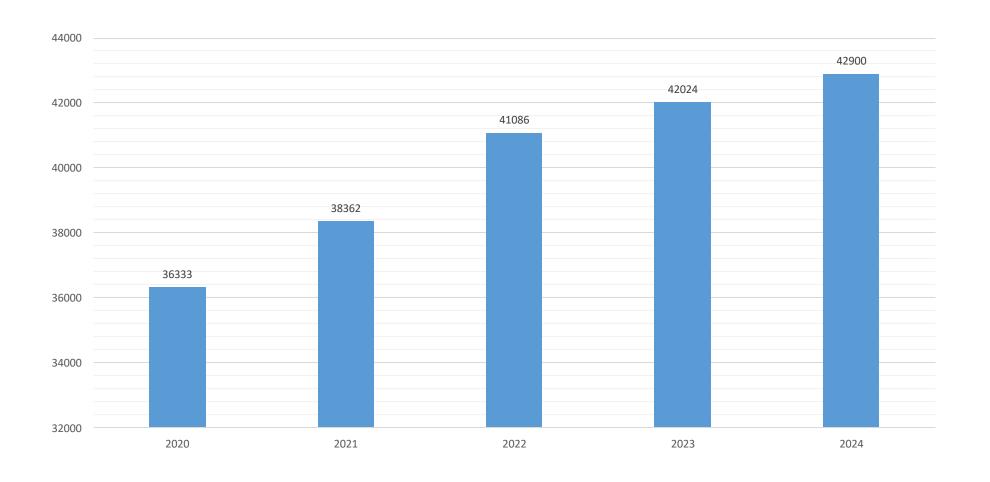

Georgia Department of Public Health

- Foodservice establishments:
 - Restaurants, caterers, mobile food trucks
 - Breweries that do not distribute their products
 - Temporary foodservice operations at fairs and festivals
 - Incubator kitchens

Georgia Department of Agriculture

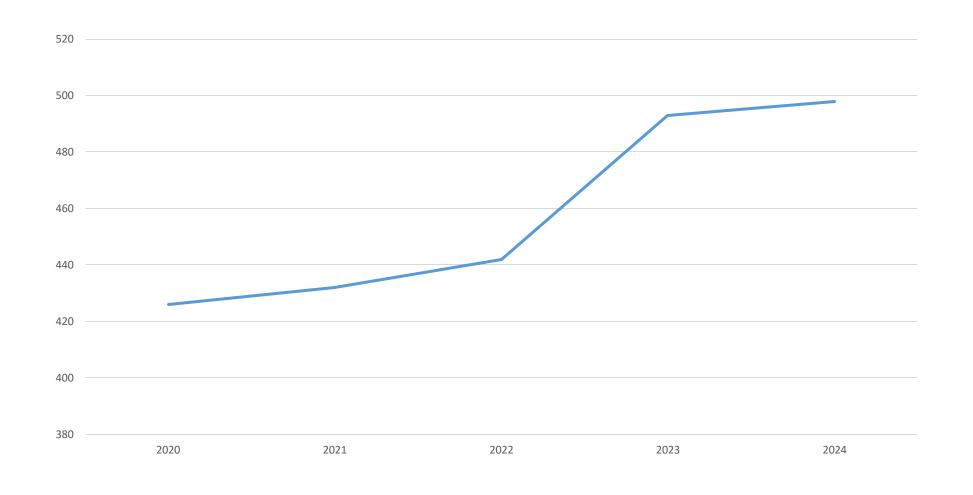

- Food sales establishments:
 - Grocery stores, convenience stores
 - Cottage food operations
- Wholesale food operations:
 - Manufactured foods
 - Breweries/wineries that do distribute their products

Number of Permitted FS Establishments 2020-2024

18.07% growth rate over 4 years

Environmental Health Specialists Staffing Count

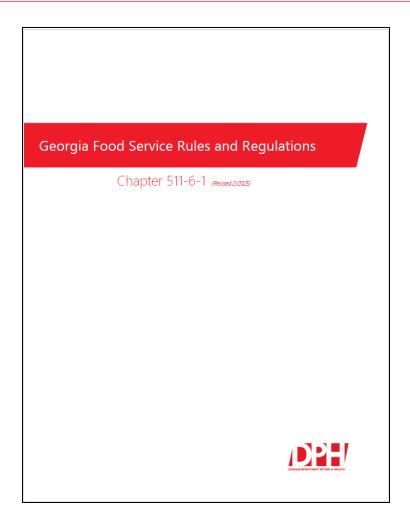

16.9% increase in EHS staff in 4 years

Environmental Health Specialists

- Requires completion of a bachelor's degree with at least 40 quarter hours or 27 semester hours of laboratory sciences
- Undergo an on-the-job training program for up to 2 years
- Require certification in on-site installations, pool operations and food safety management

- Serve as the local EH professional in the community
- Provide education to the public and regulated facilities
- Assist with new openings and changes of ownership of regulated businesses
- Protect the public's health by enforcing rules and regulations when necessary

Standardized Food Inspection Program

- Adopted the 2022 FDA Food Code this year
- One of 5 states that have adopted the 2022 FDA Food Code (CO, CT, MS, PA & GA)

Innovative Food Operations in Georgia

- Robotic bar tender (ADAM)
- Revolving sushi belts
- Movie catering operations
- "Pop-up" foodservice operations
- Volcanic rock steak house
- Ghost kitchens
- Incubator kitchens
- Nitrogen induced drinks (Dragon's Breath)
- Cat cafés
