

**MEMORANDUM**

**ACTION MEMO #17-16**

**TO:** District Nutrition Services Directors

**FROM:** Angela Hammond-Damon, IBCLC   
Deputy Director, Operations and Nutrition Services  
Georgia WIC Program

**DATE:** July 17, 2017

**SUBJECT:** FFY 2018 Nutrition Risk Criteria Handbook

This memorandum is being written to provide guidance on the implementation of the FFY 2018 Nutrition Risk Criteria Handbook. The revised nutrition risk criteria are effective **August 7, 2017**.

The State WIC Office is conducting a live web-based training, discussing all revisions, on July 26, 2017, from 1:00 pm to 1:45 pm. The training will also be recorded and made available on SABA. Each district is strongly encouraged to have staff attend the live web-based training, as there will be opportunity for questions and answers. Districts must ensure that CPAs attend the web-based training or view the recorded training.

All paper copies of the Nutrition Risk Criteria Handbook should be updated by replacing the revised pages. Replacement pages have been provided (Attachment A). When printing, make sure the appropriate pages are double-sided. Printing the pages to match the already assigned color coding for each category is suggested. The entire FFY 2018 Nutrition Risk Criteria Handbook will be available on the District Resources page on August 7, 2017.

**Below is the list of revised criteria and changes (See Attachment A for details):**

1. 135 - Slowed/Faltering Growth Pattern: New name and definition. No longer used for children.
2. 321 - History of Spontaneous Abortion, Fetal or Neonatal Loss: New name and definition was changed to include spontaneous abortion.
3. 332 - Short Interpregnancy Interval: The definition was changed. This criteria is now specific to previous pregnancies ending in live births.
4. 352 - Infectious Diseases: The criteria has been divided, for all WIC types, into two parts: Acute and Chronic. The information was separated to better address the distinctions between these acute and chronic conditions.
5. Appendix A-1 "Women's Health Recommended Guidelines For Iron Supplementation Based On Treatment Values": Updated hemoglobin (hgb) values for consistent wording.
6. Appendix A-2 "Child Health Recommended Guidelines For Iron Supplementation Based On Treatment Values": Updated hemoglobin (hgb) values for consistent wording.

7. Appendix B-3 "Definition of Inadequate Growth for Infants 1-6 Months of Age": Page was removed.

**Action Steps:**

- 1) Ensure staff attend the web-based training on July 26, 2017.
- 2) Make arrangements for staff not able to attend the live web-based training to view the recorded training on SABA.
- 3) Ensure all CPA staff receive the revised pages of the Nutrition Risk Criteria Handbook.
- 4) Update 2017 Risk Handbooks with the replacement pages and remove Appendix B-3 page from the 2017 Risk Handbook.

In regards to additional questions or concerns, please contact Angela Bradford at 404-463-1716 or via email at [angela.bradford@dph.ga.gov](mailto:angela.bradford@dph.ga.gov).

CODE		PRIORITY
354	<p><b>CELIAC DISEASE</b></p> <p>Also known as Celiac Sprue, Gluten Enteropathy, or Non-tropical Sprue.</p> <p>Inflammatory condition of the small intestine precipitated by the ingestion of wheat in individuals with certain genetic make-up.</p> <p>Presence of condition diagnosed, documented, or reported by a physician or someone working under a physician's orders, or as self-reported by applicant/participant/caregiver.</p> <p>Document: Diagnosis and name of the physician that is treating this condition in the participant's health record.</p> <p>High Risk: Diagnosed Celiac Disease</p>	III
355	<p><b>LACTOSE INTOLERANCE</b></p> <p>Lactose intolerance occurs when there is an insufficient production of the enzyme lactase. Lactase is needed to digest lactose. Lactose in dairy products that is not digested or absorbed is fermented in the small intestine producing any or all of the following GI disturbances: nausea, diarrhea, abdominal bloating, cramps. Lactose intolerance varies among and within individuals and ranges from mild to severe.</p> <p>Presence of condition diagnosed, documented, or reported by a physician or someone working under a physician's orders, or as self-reported by applicant/participant/caregiver.</p> <p>Document: Diagnosis and the name of the physician that is treating this condition in the participant's health record; OR list of symptoms described by the applicant/participant/caregiver (i.e., nausea, cramps, abdominal bloating, and/or diarrhea).</p>	III

**WOMEN'S HEALTH  
RECOMMENDED GUIDELINES FOR IRON SUPPLEMENTATION  
BASED ON TREATMENT VALUES**

	Hemoglobin Treatment Value		Hematocrit Treatment Value	
	Non-Smokers	Smokers	Non-Smokers	Smokers
Prenatal Woman 1 <sup>st</sup> Trimester 3 <sup>rd</sup> Trimester	<11.0 gm	<11.3 gm	<33.0%	<34.0%
Prenatal Woman 2 <sup>nd</sup> Trimester	<10.5 gm	<10.8 gm	<32.0%	<33.0%
Non-Pregnant and/or Lactating Woman (<15 years of age)	<11.8 gm	<12.1 gm	<35.7%	<36.7%
Non-Pregnant and/or Lactating Woman (≥15 years of age)	<12.0 gm	<12.3 gm	<35.7%	<36.7%

**PHYSICIAN REFERRAL:**

- Hemoglobin less than 9.0 g/dL or hematocrit less than 27.0%
- Hemoglobin more than 15.0 g/dL or hematocrit more than 45.0% (2<sup>nd</sup> and 3<sup>rd</sup> trimester)
- If after 4 weeks the hemoglobin does not increase by 1 g/dL or hematocrit by 3%, despite compliance with iron supplementation regimen and the absence of acute illness

In 2006, the U.S. Preventive Services Task Force released a Recommendation Statement that states that the American College of Obstetricians and Gynecologists (ACOG) recommends screening and treatment based on low Hemoglobin results. ACOG does not recommend routine supplementation for pregnant women at this time.

CHILD HEALTH RECOMMENDED GUIDELINES  
FOR IRON SUPPLEMENTATION  
BASED ON TREATMENT VALUES

	Hemoglobin Treatment Value	Hematocrit Treatment Value	Treatment Regimen
Infant 6 through 11 months	<11.0	<33.0%	<u>Dosage:</u> 0.6 cc Ferrous Sulfate Drops BID <u>Mg Elemental Iron:</u> 15 mg BID
Child 12 through 23 months	<11.0	<32.9%	<u>Dosage:</u> 0.6 cc Ferrous Sulfate Drops BID <u>Mg Elemental Iron:</u> 15 mg BID
Child 2 through 5 years	<11.1	<33.0%	<u>Dosage:</u> 1.2 cc Ferrous Sulfate Drops BID <u>Mg Elemental Iron:</u> 30mg BID

- Premature and low birth weight infants, infants of multiple births, and infants with suspected blood losses should be screened before 6 months of age, preferably at 6-8 weeks postnatal.
- Routine screening for iron deficiency anemia is not recommended in the first 6 months of life.
- Treatment of iron deficiency anemia is 3-6 mg per kilogram per day.
- Refer to the package insert of iron preparation to correctly calculate the appropriate dosage of elemental iron. Most pediatric chewable preparations (i.e., Feostat, 100 mg) contain 33 mg elemental iron per tablet as ferrous fumarate. Non-chewable preparations for older patients (i.e., Feosol, 300 mg) contain 60-65 mg per tablet or capsule elemental iron as ferrous sulfate.
- The doses for the liquid product referred to in the chart are based on the solution concentration of 15mg/0.6ml.

## Definition of Weight Gain (Women)

### Total Weight Gain Range (lbs.)

#### Singleton Pregnancy

Pre-pregnancy Weight Groups	Definition (BMI)	Low Maternal Weight Gain	Recommended Weight Gain	High Maternal Weight Gain
Underweight	< 18.5	<28	28-40	> 40
Normal Weight	18.5 to 24.9	<25	25-35	> 35
Overweight	25.0 to 29.9	<15	15-25	> 25
Obese	≥ 30.0	<11	11-20	> 20

#### Multi-Fetal Weight Gain

Pre-pregnancy Weight Groups	Definition (BMI)	Low Maternal Weight Gain	Recommended Weight Gain	High Maternal Weight Gain
Underweight	< 18.5	There was insufficient information for the IOM committee to develop provisional guidelines for underweight woman with multiple fetuses.	1.5lbs./week during 2 <sup>nd</sup> and 3 <sup>rd</sup> trimesters	There was insufficient information for the IOM committee to develop provisional guidelines for underweight woman with multiple fetuses.
Normal Weight	18.5 to 24.9	<37	37-54	> 54
Overweight	25.0 to 29.9	<31	31-50	> 50
Obese	≥ 30.0	<25	25-42	> 42

As you work with counseling morbidly obese pregnant participants, please be aware that American Congress of Obstetricians and Gynecologists, has opined that careful consideration of weight gain based on a holistic assessment of the mother and baby is necessary as these are only general recommendations. This does not impact the selection of the appropriate risk factors and growth charts for evaluation. It does mean that your counseling should be informed by a total evaluation of the participant's status including an awareness of what the participant is being told by their physician.

## PHYSICAL SIGNS SUGGESTIVE OF NUTRIENT DEFICIENCIES

Body Area	Normal Appearance	Signs Suggestive of Nutrient Deficiency(ies)	Nutrient Consideration(s)
Hair	shiny; firm; not easily plucked	lack of natural shine; dull; thin; loss of curl; color changes (flag sign); easily plucked	inadequate protein and calories
Eyes	bright; clear; shiny; no sores at corners of eyelids;	eye membranes pale;	anemia (inadequate iron, folacin, or vitamin B-12)
	membranes healthy pink and moist; no prominent blood vessels	Bitot's spots; red membranes; dryness of membranes; dull appearance of cornea (cornea xerosis); softening of cornea (keratomalacia);	inadequate Vitamin A
		redness and fissuring of eyelid corners	inadequate riboflavin, Vitamin B-6, and niacin
Lips	smooth; not chapped or swollen	redness or swelling of mouth or lips (cheilosis);	inadequate niacin and riboflavin
		bilateral cracks, white or pink lesions at corners of mouth (angular stomatitis) and/or scars	inadequate riboflavin, niacin, iron and Vitamin B-6
Gums	healthy, red; do not bleed; not swollen	spongy; bleeding; receding	inadequate ascorbic acid
Tongue	deep red; not swollen or smooth	scarlet; raw; edematous (glossitis)	inadequate niacin, riboflavin, folacin, iron, Vitamins B-6 and B-12
		purplish color (magenta);	inadequate riboflavin
		smooth; pale; slick; atrophied taste buds (papillae)	inadequate folacin, Vitamin B-12, iron and niacin
Face and Neck	skin color uniform, smooth, pink; healthy appearing; not swollen	diffuse depigmentation;	inadequate protein
		darkening of skin over cheeks and under eyes;	inadequate calories and niacin
		scaling of skin around nostrils (nasolabial seborrhea)	inadequate riboflavin, niacin, and Vitamin B-6
		swollen (moon) face;	inadequate protein
		front of neck swollen (thyroid enlargement);	inadequate protein; inadequate iodine
		swollen cheeks (bilateral parotid enlargement)	inadequate protein

## PHYSICAL SIGNS SUGGESTIVE OF NUTRIENT DEFICIENCIES

Body Area	Normal Appearance	Signs Suggestive of Nutrient Deficiency(ies)	Nutrient Consideration(s)
Skin	no signs of swelling rashes, dark or light spots	dry and scaly (xerosis); sandpaper-like feel (follicular hyperkeratosis);	Inadequate Vitamin A or Essential fatty acids
		pinhead-size purplish skin hemorrhages (petechiae);	Inadequate Vitamin C
		excessive bruising;	Inadequate Vitamin K
		red, swollen pigmentation of areas exposed to sunlight (pellagrous dermatitis);	Inadequate niacin and Tryptophan
		extensive lightness and darkness of skin (flaky, pressure sores(decubiti))	Inadequate protein, Vitamin C, and zinc
Teeth	no cavities, no pain, bright	may be some missing or erupting abnormally; gray or black spots (fluorosis); cavities (caries) [signs are to be severe enough to interfere with mastication and/or other health implications]*	Inadequate Vitamin D and Vitamin A
Head / Neck	face not swollen	thyroid enlargement (front of neck); parotid enlargement (cheeks become swollen)	Inadequate iodine; inadequate protein
Nails	firm, pink	nails are spoon-shaped (koilonychia); brittle ridged nails, pale nail beds	Inadequate iron; Vitamin A toxicity
Muscular and Skeletal Systems	good muscle tone; some fat under skin; can walk or run without pain	muscles have "wasted" appearance; baby's skull bones are thin and soft (craniotabes); round swelling of front and side of head (frontal and parietal bossing); swelling of ends of bones (epiphyseal enlargement); small bumps on both sides of chest wall (on ribs); beading of ribs; baby's soft spot on head does not harden at proper time (persistently open anterior fontanelle); knock-knees or bow-legs; bleeding into muscle (musculoskeletal hemorrhages); person cannot get up or walk properly	Inadequate protein Inadequate thiamin Inadequate Vitamin D

### Inappropriate Nutrition Practices for Children

Inappropriate Nutrition Practices for Children	Examples of Inappropriate Nutrition Practices (Including but not limited to)
<p>Inappropriate beverages as primary milk source</p> <p>Routinely feeding inappropriate beverages as the primary milk source.</p>	<p>Examples of inappropriate beverages as primary milk source:</p> <ul style="list-style-type: none"> <li>• Non-fat or reduced-fat milks (between 12 and 24 months of age only) or sweetened condensed milk; and</li> <li>• Imitation or substitutes milks (such as inadequately or unfortified rice- or soy-based beverages, non-dairy creamer), or other “homemade concoctions.”</li> </ul>
<p>Routinely feeding sugar-containing fluids</p> <p>Routinely feeding a child any sugar-containing fluids.</p>	<p>Examples of sugar-containing fluids:</p> <ul style="list-style-type: none"> <li>• Soda/soft drinks;</li> <li>• Gelatin water;</li> <li>• Corn syrup solutions; and</li> <li>• Sweetened tea.</li> </ul>
<p>Improper use of nursing bottles, cups, or pacifiers</p> <p>Routinely using nursing bottle, cups, or pacifiers improperly.</p>	<ul style="list-style-type: none"> <li>• Using a bottle to feed: <ul style="list-style-type: none"> <li>➢ Fruit juice, or</li> <li>➢ Diluted cereal or other solid foods.</li> </ul> </li> <li>• Allowing the child to fall asleep or be put to bed with a bottle at naps or bedtime.</li> <li>• Allowing the child to use the bottle without restriction (e.g., walking around with a bottle) or as a pacifier.</li> <li>• Using a bottle for feeding or drinking beyond 14 months of age.</li> <li>• Using a pacifier dipped in sweet agents such as sugar, honey, or syrups.</li> <li>• Allowing a child to carry around and drink, throughout the day, from covered or training cups.</li> </ul>
<p>Feeding practices that disregard development</p> <p>Routinely using feeding practices that disregard the developmental needs or stages of the child.</p>	<ul style="list-style-type: none"> <li>• Inability to recognize, insensitivity to, or disregarding the child’s cues for hunger and satiety (e.g., forcing a child to eat a certain type and/or amount of food or beverage or ignoring a hungry child’s request for appropriate foods).</li> <li>• Feeding foods of inappropriate consistency, size, or shape that put children at risk of choking.</li> <li>• Not supporting a child’s need for growing independence with self-feeding (e.g.; solely spoon-feeding a child who is able and ready to finger-feed and/or try self-feeding with appropriate utensils).</li> <li>• Feeding a child with an inappropriate texture based on his/her developmental stage (e.g., feeding primarily purees or liquid food when the child is read and capable of eating mashed, chopped, or appropriate finger food).</li> </ul>

## Appendix E (cont'd)

Inappropriate Nutrition Practices for Children	Examples of Inappropriate Nutrition Practices (Including but not limited to)
<p>Ingestion of potentially contaminated foods</p> <p>Feeding foods to a child that could be contaminated with harmful microorganisms.</p>	<p>Examples of potentially harmful foods for a child:</p> <ul style="list-style-type: none"> <li>• Unpasteurized fruit or vegetable juices.</li> <li>• Unpasteurized dairy products or soft cheese such as feta, Brie, Camembert, blue-veined cheeses and Mexican style cheese such as queso blanco, queso fresco, or Panela unless labeled as “made with pasteurized milk</li> <li>• Raw or undercooked meat, fish, poultry, or eggs</li> <li>• Raw sprouts (alfalfa, clover, and radish)</li> <li>• Hot dogs, luncheon meat (cold cuts), fermented and fry sausage and other deli-style meat or poultry unless reheated until steaming hot;</li> <li>• Undercooked, raw tofu</li> </ul>
<p>Diet very low in calories or essential nutrients</p> <p>Routinely feeding a diet very low in calories and/or essential nutrients.</p>	<p>Examples:</p> <ul style="list-style-type: none"> <li>• Vegan Diet;</li> <li>• Macrobiotic diet; and</li> <li>• Other diets very low in calories and/or essential nutrients.</li> </ul>
<p>Potentially harmful dietary supplements</p> <p>Feeding dietary supplements with potentially harmful consequences</p>	<p>Examples of dietary supplements which when feed in excess of recommended dosages, may be toxic or have harmful consequences:</p> <ul style="list-style-type: none"> <li>• Single or multiple vitamins</li> <li>• Mineral supplements; and</li> <li>• Herbal or botanical supplements/remedies/teas</li> </ul>
<p>Inadequate supplementation of essential vitamin/minerals</p> <p>Routinely not providing dietary supplements as recognized as essential by national public health policy when a child’s diet alone cannot meet nutrient requirements.</p>	<ul style="list-style-type: none"> <li>• Providing children under 36 months of age less than 0.25 mg of fluoride daily when the water supply contains less than 0.3 ppm fluoride.</li> <li>• Providing children 36-60 months of age less than 0.50 mg of fluoride daily when the water contains less than 0.3 ppm fluoride.</li> <li>• Not providing 400 IU of vitamin D if a child consumes less than 1 liter (or 1 quart) of vitamin D fortified milk or formula.</li> </ul>
<p>Routine ingestion of non-food items (pica)</p>	<ul style="list-style-type: none"> <li>• Ashes;</li> <li>• Carpet fibers;</li> <li>• Cigarettes or cigarette butts;</li> <li>• Clay;</li> <li>• Dust;</li> <li>• Foam Rubber</li> <li>• Paint chips;</li> <li>• Soil; and</li> <li>• Starch (laundry and cornstarch)</li> </ul>
