The purpose of this report is to describe District level fatal (mortality) and nonfatal (morbidity) opioid-involved overdoses, which occurred in Georgia during 2022, including prescription opioids, and illicit opioids such as heroin, fentanyl, and fentanyl analogs. Opioid overdose data were analyzed by the Georgia Department of Public Health (DPH) Epidemiology Program, Drug Surveillance Unit, using Georgia hospital discharge inpatient and emergency department (ED) visit data, and DPH Vital Records death data. A description of the data and case definitions can be found at the end of the report.
