

# Ending Viral Hepatitis: A PLAN FOR GEORGIA

The Georgia Department of Public Health in collaboration with statewide subject matter experts, community partners, and stakeholders, released a strategic plan to combat viral hepatitis within the state of Georgia by 2030. **The Georgia Viral Hepatitis Elimination Plan** includes 4 overarching goals, strategies, objectives, and activities to achieve these goals.

## Our Vision

All Georgia residents will have equitable access to quality services that will prevent new viral hepatitis infections; allow Georgians to know their viral hepatitis status; and allow access to quality and affordable care and treatment services, despite age, sex, gender identity, sexual orientation, race, ethnicity, sobriety, geographic location, or socioeconomic status.

## Our Mission

To develop a collaborative approach to eliminating viral hepatitis A, B, and C in Georgia by improving affordable and equitable access to prevention services, testing, supportive care, and treatment.

## Our Goals

### Surveillance & Research:

Improve statewide viral hepatitis surveillance infrastructure to identify viral hepatitis infections and quantify the prevalence of hepatitis B and C in Georgia, and to inform prevention strategies.

### Prevention & Education:

Reduce new viral hepatitis infections in Georgia.

### Policy:

Reduce barriers in accessing viral hepatitis prevention, screening, supportive care, and treatments.

### Medical Care & Treatment:

Increase the number of providers offering equitable viral hepatitis A, B and C prevention, screening, and treatment services.
