<sup>1</sup>Operations w/BOD<sub>5</sub> and TSS > 200 mg/l require pretreatment to reduce BOD<sub>5</sub> and TSS to 200 mg/l or below.  
<sup>2</sup>Means the temporary rental of sites. Add 500 gallons/machine if washing machine installed. Parks established for the permanent placement of RV's shall meet the same requirements established for single-family residential use.  
<sup>3</sup>Add 500 gallons/machine if washing machine installed.  
<sup>4</sup>For residential properties using conventional systems, refer to Section D.  
<sup>5</sup>The minimum septic tank capacity shall be 1000 gallons for one, two, three or four bedrooms and 250 additional gallons for each bedroom over four.

**Sewage Flow Schedule Notes:**

1. Facilities with multiple uses require additive flows, e.g. a grocery store with a food service would utilize 200/1000ft<sup>2</sup> of floor space plus 50/seat.
2. Applicants may submit water usage data for identical or similar operations where uses are not noted in Table 13.J or where the applicant is requesting design based on a lesser flow than determined from Table 13.J. The Health Department may consider such data as one component in determining peak flow and shall not allow designs based on averages.

**Table 14.J Design Basis for Central Septic Tank Systems**

<b>Central Septic Tank System</b>	<b>Minimum Septic Tank Capacity</b>	<b>Minimum Absorption Field Area (Based on Bedrooms)</b>
Mobile Home Park	1000 gallons / space <sup>5</sup>	3 Bedroom minimum / space
Multi-family residential	1000 gallons / unit <sup>5</sup>	Based on # of Bedrooms
