

The Supplemental Nutrition Assistance Program Education (SNAP-Ed) initiative seeks to improve the likelihood that persons eligible for SNAP will make healthy food choices and choose a physically active lifestyle. Currently, services are targeted in counties with high-obesity and low food security within Georgia. Through strategic partnerships, the program provides direct nutrition education to SNAP-eligible individuals to encourage the consumption of fruits/vegetables to achieve a healthy body weight and support in the development of community gardens in areas with a large SNAP-eligible population. There were 26 new partnerships in FY 2023.

The Landscape:

In FY 2023, Georgia ranked 21st out of 50 states in the United States for adult obesity, with a rate of 32.5%, compared to the national rate of 30%. Specifically, 33.9% of adults in Georgia are affected by obesity, and low-income families are disproportionately impacted by this issue and its associated health consequences. Additionally, hunger remains a significant concern in Georgia, where 1 in 9 people face hunger, and 10.7% of individuals experience food insecurity.

Community Gardens:

In FY 2023, 4 local health districts implemented community garden interventions at public housing sites, eligible schools, and qualifying community sites such as churches and parks where at least 50% of the population are considered "SNAP-eligible." Over 9,291 pounds of produce were harvested and distributed, and 1,401 individuals received free produce.

Direct Nutrition Education:

In FY 2023, there were 11 participating counties that reached almost 200 participants. Over 152 hours of nutrition education were conducted. DPH implements education classes in collaboration with SNAP-Ed community gardens where more than 50% of employees are considered "SNAP-eligible." Local health districts identify qualified sites and deliver monthly direct nutrition education sessions in a group setting. The health districts also engage community coalitions in policy, systems and environmental (PSE) changes to create more supportive nutrition environments and reduce chronic diseases.

Social Marketing:

In FY 2023, SNAP-Ed social marketing campaigns were implemented across 27 counties. These efforts generated an impressive 16,273,112 media impressions, effectively spreading the message of healthy living and nutrition. As a result, 169,656 individuals were directly reached and engaged through these campaigns, promoting healthier food choices and active lifestyles among SNAP-eligible populations.

Direct Quote from Nutrition Education Participant:

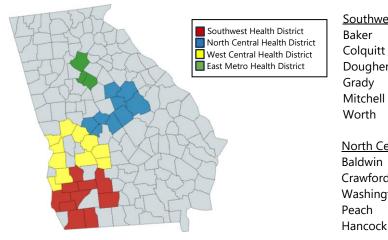

"The classes were great! I learned so much information about protein, grains, fruits and vegetables, and much more! My family and I are so grateful to have been invited to participate. We are much healthier and more physically active because of these classes."

- Participant from Rockdale County

Outcomes:

In FY 2023, after participating in the SNAP-Ed program, participants reported a 19.5% increase in fruit consumption, 4.9% increase in vegetable consumption, and 61% of participants read nutrition labels compared to 36.6% before nutrition education. Participants also reported increased engagement in physical activity three days a week on average after completing nutrition education.

Health Districts and Counties Served by SNAP-Ed:

Southwest Health	<u>District</u>	
Baker	Calhoun	
Colquitt	Decatur	
Dougherty	Early	
Grady	Miller	
Mitchell	Terrell	
Worth	Seminole
