Georgia EMS Data Requirements

June 2024

GEORGIA DEPARTMENT OF PUBLIC HEALTH

Data Reporting Requirements – State Reporting

• Who is required to submit data?

o EMS Agency Licensed in Georgia only

All responses, regardless of starting/ending location or dispatch origin MUST be reported to Georgia (GEMSIS Elite) within 24 hours of call completion

$_{\odot}$ EMS Agency Licensed in Georgia and another state

All responses requested (originator) from a Georgia entity (911, hospital, NH/LTCF, etc) – MUST be reported to Georgia (GEMSIS Elite) within 24 hours of call completion, regardless of the destination

□ <u>All responses</u> requested (originator) from another state:

- If call is completed in a vehicle licensed in both states (Georgia and the other state):
 - Personnel licensed only in Georgia \rightarrow Report to Georgia
 - Personnel licensed only in other state or in both \rightarrow Report to other state
- If call is completed in a vehicle licensed only in Georgia MUST be reported to Georgia (GEMSIS Elite) within 24 hours of call completion, regardless of starting/ending location

Data Reporting by the Numbers for EMS Agencies

• For each **Incident**:

- There must be a unique eResponse.03 Incident Number
 - This must be the same for ALL vehicles, ALL patients for THIS incident from the same agency
 - "This number can be used to associate multiple EMS responses, dispatch information, and other information to the same EMS event or patient."

• For each Vehicle:

• There must be a unique **eResponse.04 - EMS Response Number**

- □ This must be the same for ALL patients for THIS vehicle for THIS incident
- "The internal EMS response number which is unique for each EMS Vehicle's (Unit) response to an incident within an EMS Agency."

• For each **Patient or Response**:

- There must be a unique **eRecord.01 Patient Care Report Number**
 - "The unique number automatically assigned by the EMS agency for each Patient Care Report (PCR). This should be a unique number for the EMS agency for all of time."

NOTE on Incident Number, Response Number, PCR Number

• Do NOT put the patient's name in any of the numbers!

 $_{\odot}$ These are all national elements, which means that they are sent to NEMSIS and available to the public!

If you have a scheduled transport from Point A to Point B and then a second trip for the same patient back from Point B to Point A – this is two (2) incidents, so they should have 2 incident numbers, 2 response numbers and 2 PCR Numbers

Examples for an EMS Agency

- **Example 1:** One vehicle responds to one patient for a single 911 call:
 - 1 unique eResponse.03 Incident Number
 - o 1 unique eResponse.04 EMS Response Number (can be the same as eResponse.03)
 - 1 unique eRecord.01 Patient Care Report Number

- **Example 2:** Two vehicles from the same agency (one MFR, one ambulance) respond to one patient for a single 911 call:
 - 1 unique eResponse.03 Incident Number
 - 2 unique eResponse.04 EMS Response Number
 - 2 unique eRecord.01 Patient Care Report Number

- Example 3: Two vehicles from <u>same</u> agency (one MFR = Engine 1, one ambulance = Med 1) two car MVC, 4 patients all refusals that are split between the two vehicles -
 - 1 unique eResponse.03 Incident Number same for E1 & M1
 - $_{\odot}$ 2 unique eResponse.04 EMS Response Number (one for E1, one for M1)
 - $_{\circ}$ For Engine 1

□ 2 unique eRecord.01 - Patient Care Report Number (one for Pt 1, one for Pt 2) ∘ For Med 1

□ 2 unique eRecord.01 - Patient Care Report Number (one for Pt 3, one for Pt 4)

Example 3: Two vehicles from <u>same</u> agency (one MFR = Engine 1, one ambulance = Med 1) – two car MVC, 4 patients – all refusals that are split between the two vehicles

PUBLIC HEALTH

- Example 4: Two vehicles from <u>same</u> agency (one MFR = Engine 8, one ambulance = Med 8) two car MVC, 4 patients all refusals that are done by just the med unit -
 - 1 unique eResponse.03 Incident Number same for E8 & M8
 - o 2 unique eResponse.04 EMS Response Number (one for E8, one for M8)
 - \circ For Engine 8
 - □ 1 unique eRecord.01 Patient Care Report Number
 - eDisposition.12 Incident/Patient Disposition appropriate to the level of involvement
 - \circ For Med 8
 - □ 4 unique eRecord.01 Patient Care Report Number (one each for Pt 1, 2, 3, and 4)

Example 4: Two vehicles from <u>same</u> agency (one MFR = Engine 8, one ambulance = Med 8) – two car MVC, 4 patients – all refusals that are done by just the med unit -

Another Twist

Example 5: Two vehicles from <u>different</u> agencies (one MFR = Engine 1, one ambulance = Unit 222) – two car MVC, 4 patients – all refusals that are split between the two vehicles -

• MFR Agency (E1):

□ 1 unique eResponse.03 - Incident Number

□ 1 unique eResponse.04 - EMS Response Number

□ Patients that they come into contact with:

- Patient 1 = 1 unique eRecord.01 Patient Care Report Number
- Patient 2 = 1 unique eRecord.01 Patient Care Report Number

• Ambulance Agency (Unit 222):

□ 1 unique eResponse.03 - Incident Number

- □ 1 unique eResponse.04 EMS Response Number
- □ Patients that they come into contact with:
 - Patient 3 = 1 unique eRecord.01 Patient Care Report Number
 - Patient 4 = 1 unique eRecord.01 Patient Care Report Number

Example 5: Two vehicles from <u>different</u> agencies (one MFR = Engine 1, one ambulance = Unit 222) – two car MVC, 4 patients – all refusals that are split between the two vehicles

One more example...

Example 6: Two vehicles from <u>different</u> agencies (one MFR = Engine 2, one ambulance = Unit 777) – ambulance gets their first and cancels the engine before they get to the scene

Ambulance Agency (Unit 777):

□ 1 unique eResponse.03 - Incident Number

- □ 1 unique eResponse.04 EMS Response Number
- □ 1 unique eRecord.01 Patient Care Report Number

 $_{\odot}$ MFR Agency (E2):

- □ 1 unique eResponse.03 Incident Number
- □ 1 unique eResponse.04 EMS Response Number
- □ 1 unique eRecord.01 Patient Care Report Number
 - eDisposition.27 Unit Disposition = Cancelled (Prior to Arrival at Scene)

Example 6: Two vehicles from <u>different</u> agencies (one MFR = Engine 2, one ambulance = Unit 777) – ambulance gets their first and cancels the engine before they get to the scene

- **Example 7:** One vehicle from an agency is dispatched to a standby at a football game and encounters no patients and does not provide operational support.
 - □ 1 unique eResponse.03 Incident Number
 - □ 1 unique eResponse.04 EMS Response Number
 - □ 1 unique eRecord.01 Patient Care Report Number
 - eDisposition.27 Unit Disposition = Non-Patient Incident (Not Otherwise Listed)

Patient Contacts

- If the crew comes into contact with the patient at all, the ePCR <u>must</u> include the patient's demographics
 - $_{\circ}$ Minimum elements
 - First Name
 - Last Name
 - DOB

Do's and Don'ts on Patient Names

- **DO** your best to get the patient's name
- **DO** spell it correctly
- If you can't get the patient's name
 - Do **NOT** make it up!

 Do NOT put "Unknown" or some other "fake" word - use the pertinent negatives

The patient's last (family) name National Element No Pertinent Negatives (PN) Yes State Element Yes NOT Values Yes Version 2 Element E06_01 Is Nillable Yes				ePatient.03 - First Name

What about babies that have not been named?

- Follow the hospital's naming convention (especially for Neonatal ambulance services) for births, especially multiples
- OR suggested naming strategy
 - $_{\rm O}$ Last name is that of mom
 - First name = "Baby Boy" or "Baby Girl"
 - Example:
 - □ Mom = Jane Doe has 3 babies

First Name (# is birth order)	Last Name
Baby Boy #1	Doe
Baby Boy #2	Doe
Baby Girl #3	Doe

If you don't know the DOB, don't make it up – Use PN on DOB, and then estimate Age and Age Units

A few definitions...

• Timeliness:

 Timeliness reflects the span of time between the occurrence of some event and the entry of information from the event into the appropriate database. Timeliness can also measure the time from when the custodial agency receives the data to the point when the data is entered into the database.

• Accuracy:

 Accuracy reflects the number of errors in information in the records entered into a database. Error means the recorded value for some data element of interest is incorrect. Error does not mean that the information is missing from the records. Erroneous information in a database cannot always be detected.

Completeness:

 Completeness reflects both the number of records that are missing from the database (e.g., events of interest that occurred but were not entered into the database) and the number of missing (blank) data elements in the records that are in a database.

...and a few more...

• Uniformity:

 Uniformity reflects the consistency among the files or records in a database and may be measured against some independent standard, preferably a national standard.

• Integration:

 Integration reflects the ability of records in a database to be linked to a set of records in another core database -or components using common or unique identifiers.

• Accessibility:

 Accessibility reflects the ability of legitimate users to successfully obtain desired data. Accessibility is measured in terms of customer satisfaction.

• Validity:

 Validity in data collection means that your findings truly represent the phenomenon you are claiming to measure. Data validation is the process of ensuring data have undergone data cleansing to ensure they have data quality, that is, that they are both correct and useful.

GEORGIA DEPARTMENT OF PUBLIC HEALTH

A note on Accuracy

- You can change the label...but NOT the definition
- For example:
 - You could change "911 Response (Scene)" to "911 Emergency Response (Scene)"
 - You CAN'T change it to "Emergency Response for Transfer"

eResponse.05 - Type of Service Requested

Definition

The type of service or category of service requested of the EMS Agency responding for this specific EMS event.

205029	Mortuary Services
205031	Mobile Integrated Health Care Encounter
205033	Evaluation for Special Referral/Intake Programs

2205035 Administrative Operations

Who fills the report out?

- <u>The Medics who run the call</u> must be the ones to enter the data into an ePCR system (paper PCRs are not acceptable on a routine basis). See *Rule 511-9-2-*.14. Mandatory Reporting Requirements for EMS Agencies and Medics
- Validation rules are built to not only make the data better but to make the medic better at documentation → medics need to be the ones to enter the data and address the validation rules
- The most timely, accurate, complete, uniform, and valid data come from the medics who actually ran the call

Documenting the correct license number

- eCrew.01 the license number
- Must be properly formatted single letter and then 6-digit number left padded with 0s (zeroes) *these are not the letter "O"*
 - E###### (i.e. E001234)
 - I###### (i.e. I023456)
 - A###### (i.e. A003456)
 - C###### (i.e. C000012)
 - P###### (i.e. P005678)
- Should match the license level (eCrew.02)
- Should be updated when a medic gets a new license
- This is NOT the National Registry number.
- This is NOT a number starting with "GA"

GEORGIA DEPARTMENT OF PUBLIC HEALTH

Timeliness of Data

- Medics must complete the ePCR before the end of the current work shift for the responding crew
- Data must be submitted to GEMSIS Elite within 24 hours of call completion (as measured by eTimes.13)

Definition			
The date/time the unit bac necessarily back in home		nd available for response (finished	with call, but not
National Element	Yes	Pertinent Negatives (PN)	No
State Element	Yes	NOT Values	No
Version 2 Element	E05_11	Is Nillable	No
Usage	Mandatory	Recurrence	1:1

Timeliness should not be at the expense of quality!

Timely data should still be:

Accurate
Complete
Uniform
Accessible
Valid
Able to Integrate

Software/Hardware Failures

- The responding crew must complete a paper PCR that is **substantially similar** to the EMS Agency's ePCR (contains required data elements) and the response information must be entered into the EMS Agency's ePCR software by the medic and submitted to the Department within 24 hours of the resolution of the software or hardware failure.
- All ePCR software or hardware failures must be reported to the Department within 12 hours of the failure and must be documented by the EMS Agency in a log that shall be made available for inspection by the Department.

Validation Scores

- A score, NOT a percentage
- Must be 95 or better
- Low scores must be corrected/re-submitted
- Agencies can review those scores in GEMSIS Elite (incident list or report writer)

Why 24 Hours? → COVID, Hospital Hub, etc.

GEORGIA DEPARTMENT OF PUBLIC HEALTH

Let us help you make your data better

- Let us know what data validation issues you are having
- We aren't your QA/QI team, but we might be able to help with validation rules

Facility Names

Facility list must be up-to-date and correct – see the state data set

 Facility name should match the facility name in the data set
 Example:

Crew transports a patient to Grady Memorial Hospital to Labor and Delivery
 Name (eDisposition.01) = Grady Memorial Hospital
 eDisposition.22 - Hospital In-Patient Destination = Hospital-Labor & Delivery
 DON'T use "Grady L&D" for the name

Speaking of narrative

- Narrative should:
 - Tell the "story" of the patient
 - Give information not able to be answered with other data elements
 - Detailed explanation of medical necessity
- NOTES:
 - Quality of ePCR and narrative should reflect quality of patient care
 - If you can answer a question with another data element answer it there
 - Don't use a cut and paste of a cookie cutter narrative this defeats the purpose
 - Auto-generated narratives don't tell the whole story so be careful!

NEMSIS V3.5 XML Submissions

- Should be done on a continual basis don't bulk send them
- Files that are sent must contain only 1 ePCR don't bulk send them

Data Submissions

The first submission of data should contain ALL of the pertinent clinical information: assessment, meds, vitals, procedures, times, narrative.

Crews need to address validation error when they fill out the ePCR

Resubmissions should be for update to patient demographics, billing, times, correction to validation errors

Update to name

Update to DOB

Update to billing information

Correcting times for fat-fingering/forgetting (dispatch log *must* corroborate this)

Correction to validation errors
