

Georgia Drug Overdose Data Hub Download File Data Dictionary

There are 6 files available for download that contain the most current data available. Each file contains data about either non-fatal drug overdoses, or drug overdose deaths by drug type (all drugs, all opioids, synthetic opioids). Data descriptions and case definitions can be found here (<https://dph.georgia.gov/document/document/opioid-case-definitionspdf/download>).

Depending on the file selected for download, the file will contain data about non-fatal overdoses or deaths for all drugs, all opioids, or synthetic opioids (including fentanyl). In the download files, (DRUG_TYPE) will say either ALLDRUGS, OPIOID, or SYNTHETIC.

Rates for categories with fewer than 5 deaths are suppressed, counts and rates for categories with fewer than 5 non-fatal overdoses are suppressed.
