

Georgia Weekly Influenza Report

MMWR Week 02

Updated 1/22/2016

Week 02 (Jan. 10 - Jan. 16, 2016) Synopsis

During week 02 there was minimal influenza activity in Georgia with sporadic occurrences of sustained flu transmission.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **1.64%**, which is **at** the Georgia baseline of 1.6%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **SPORADIC** during week 02.
- **Metro Area Hospitalizations:** There was 1 hospitalization due to influenza infection during week 02. There have been 42 hospitalizations due to influenza infection so far this season.
- **Influenza Related Deaths:** There were 0 confirmed deaths due to influenza. There has been 1 confirmed influenza-associated death as of 1/22/2016.
- **Viral Surveillance:** Of the **516** specimens tested by Georgia clinical laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) during week 02, **4 (0.78%)** were positive for influenza. Georgia Public Health Laboratory (GPHL) tested 5 specimens for influenza during week 01, 3 were positive for influenza.
- **Reported Influenza Outbreaks:** There were **0** influenza-related outbreaks reported to public health during week 02.
- **RSV Viral Surveillance:** Of the **320** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 02, the percent positive of **ALL** laboratory tests was 25.56%.

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **25** ILINet providers reporting in Georgia.)

ILINet Provider Network Data

This Week: **1.64%** of patients seen in ILINet Provider offices were diagnosed with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

ILINet Patient Visits By Age Group

ILINet patient visits by age group

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During **week 02** those under 24 years of age were most often seen with ILI symptoms by ILINet providers.

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>)

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is: **Minimal =3**

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

SPORADIC

Sporadic = ILI activity has not increased and isolated lab-confirmed cases of influenza

OR

ILI activity has not increased and a lab confirmed influenza outbreak in one institution.

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

Georgia Virologic Surveillance Data

During **week 02** Georgia clinical laboratories reporting to NREVSS tested 516 specimens for influenza, 4 (0.78%) were positive. The predominate strain identified was influenza A.

Note: No subtyping information will be released from clinical laboratories

During **week 01** Georgia Public Health Laboratory tested 5 specimens for influenza, 3 were positive (2 influenza A(H1N1) and 1 influenza A untyped).

Georgia threshold of RSV season onset and end

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of **ALL** lab confirmed tests are less than 10%.

RSV Season Status: ON

Respiratory Syncytial Virus (RSV) Surveillance Data
