Diabetes, Prediabetes and Gestational Diabetes in Georgia

This Georgia Diabetes Community Resource guide provides a general listing of services and resources for Georgians diagnosed with diabetes, prediabetes (also known as borderline diabetes) or gestational diabetes mellitus (GDM), their loved ones as well as healthcare and public health professionals providing care and support to them.

Prepared by: Georgia Diabetes Prevention and Control Program

OUR VISION

Georgians living well free of diabetes and its complications within environments with increased access to quality-oriented diabetes care and healthier options where they live, work, play, and learn.

OUR MISSION

Protecting and Preserving the Eyes, Hearts, Kidneys and Feet of Georgians Living Well with Diabetes, Pre-Diabetes and Gestational Diabetes

INTRODUCTION

This resource guide was developed by the Georgia Department of Public Health’s Diabetes Prevention and Control Program (DPCP) to support Georgia residents at risk for diabetes or diagnosed with diabetes, prediabetes and gestational diabetes mellitus (diabetes during pregnancy).

The information contained in this resource guide is not a replacement for medical advice or treatment. If you feel that you may be at risk for prediabetes (borderline diabetes) or diabetes or already diagnosed with diabetes or gestational diabetes mellitus (diabetes during pregnancy), please seek routine medical care by finding or contacting your doctor or healthcare professional.

It is important to discuss any changes and questions regarding diet changes and physical activity levels with your doctor, nurse, registered dietician, certified diabetes educator before making a change. Some changes in your eating and physical activity may affect your blood sugar (glucose) level. It is also important to work with your doctor to obtain additional information about local resources to maintain proper vision care, foot care and dental care.

DIABETES OVERVIEW

About one-third (1/3) of individuals with diabetes are unaware they have diabetes. If not controlled, diabetes is a serious disease that can lead to other severe health conditions including vision problems (including blindness), kidney failure, nerve damage, amputations (legs, toes, feet) and significantly impact daily living.

Diabetes is a condition in which the body cannot change sugars and starches (carbohydrates) into energy. This happens when the body cannot make enough insulin or cannot use the insulin it makes. As a result, extra sugar in the blood can lead to damage in the blood vessels, eyes, kidneys, heart, and nerves.

TYPE 1 DIABETES

A medical condition in which the body makes no insulin or so little insulin that the body cannot change blood sugar into energy.

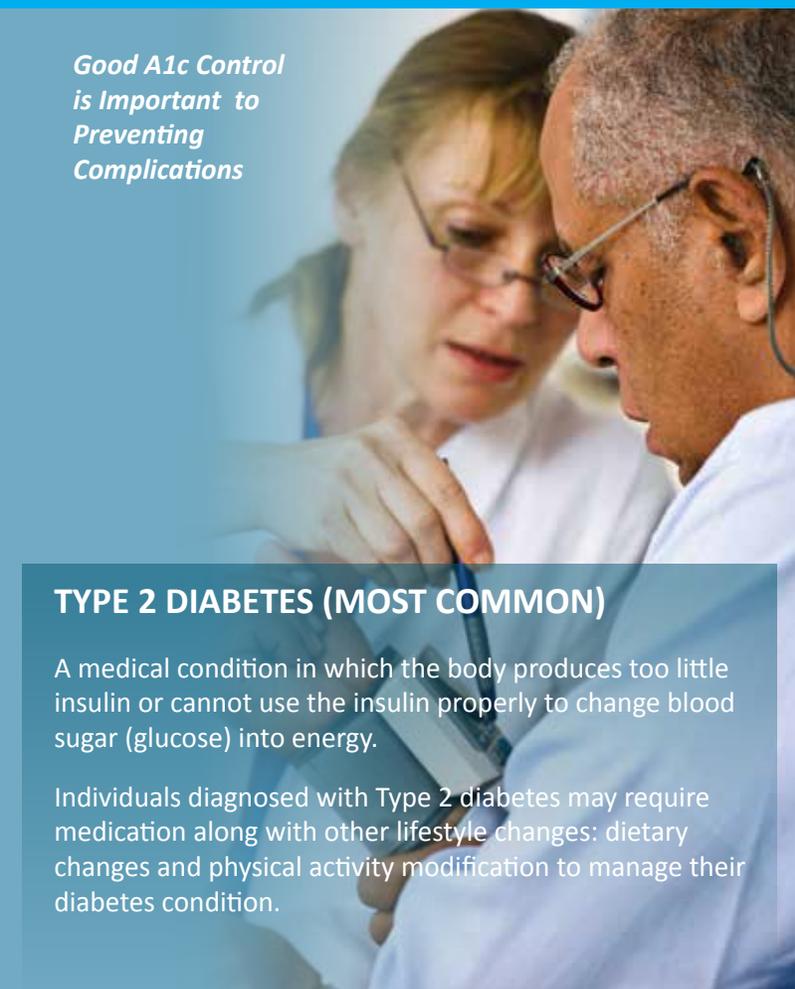

Type 1 diabetes usually develops during childhood or adolescence, before a woman becomes pregnant. Insulin helps the body use glucose from food for energy. People with Type 1 need to take insulin every day.

*Good A1c Control
is Important to
Preventing
Complications*

TYPE 2 DIABETES (MOST COMMON)

A medical condition in which the body produces too little insulin or cannot use the insulin properly to change blood sugar (glucose) into energy.

Individuals diagnosed with Type 2 diabetes may require medication along with other lifestyle changes: dietary changes and physical activity modification to manage their diabetes condition.

OVERVIEW: GESTATIONAL DIABETES AND PREDIABETES

How can I learn more about preventing Type 2 Diabetes?
How can I prevent developing Type 2 Diabetes if I have prediabetes (borderline diabetes)? How can I prevent developing Type 2 Diabetes if I have gestational diabetes (diabetes during pregnancy)?

GESTATIONAL DIABETES

Gestational diabetes is a type of diabetes that first occurs during pregnancy or detected when a woman is pregnant. Gestational diabetes usually goes away following pregnancy but women with a history of gestational diabetes have a 35%-60% chance of developing diabetes within 10-20 years after delivery. But with risks associated with diabetes can be reduced with dietary changes and routine physical activity leading to modest appropriate weight reduction and maintenance.

Its never too early to prevent or delay diabetes. Early and routine screening and detection of prediabetes (borderline diabetes) may also provide an opportunity to prevent or delay the onset of Type 2 diabetes prior to pregnancies as well as during the postpartum period following each pregnancy.

PRE-DIABETES (BORDERLINE DIABETES)

Prediabetes (also known as borderline diabetes) is condition that occurs when a person's blood glucose levels are higher than normal but not high enough for a diagnosis of Type 2 diabetes. Prediabetes is sometimes referred to as "impaired fasting glucose" or "impaired glucose tolerance" by healthcare providers.

Individuals diagnosed with prediabetes are at higher risk for developing Type 2 diabetes. In addition, individuals with prediabetes also have a higher risk of heart disease. But by adopting healthy lifestyle changes including modest and appropriate diet changes along with weight reduction and maintenance at this point may prevent progression to a diabetes diagnosis.

RISK FACTORS: DIABETES & PREDIABETES

- ✓ Age: 45 or older
- ✓ Weight status: Overweight [Body Mass Index (BMI) over 25] or Obese (BMI 30 or above)
- ✓ Family history of diabetes
- ✓ History of gestational diabetes mellitus (GDM)
- ✓ Having a baby over 9 lbs
- ✓ High blood pressure (hypertension)
- ✓ History of borderline diabetes (prediabetes)
- ✓ High “LDL” cholesterol levels
- ✓ Member of certain ethnic groups: African American, Asian American, Native American, Hispanic/Latino, or Pacific Islander origin
- ✓ Lack of routine physical activity

SYMPTOMS OF HIGH BLOOD GLUCOSE (HYPERGLYCEMIA)

- ▶ Increased thirst
- ▶ Increased urination
- ▶ Dry mouth or skin
- ▶ Tiredness or fatigue
- ▶ Blurred vision
- ▶ Slow healing cuts and sores
- ▶ Unexplained weight loss

SYMPTOMS OF LOW BLOOD GLUCOSE (HYPOGLYCEMIA)

- ▶ Difficulty paying attention or confusion
- ▶ Difficulty speaking
- ▶ Shakiness
- ▶ Dizziness or light-headedness
- ▶ Sweating
- ▶ Hunger
- ▶ Sleepiness
- ▶ Headache
- ▶ Sudden moodiness or behavior changes

LEARN MORE NOW

Now that you have been diagnosed, you may have many questions and concerns. You may be wondering... What foods can I eat daily? Do I need medication and other supplies? Where can I obtain more information and education about how to live with and manage my condition successfully? What do I do now?

There are variety of programs and other resources that you can go to find answers and long-term support. Control your blood sugar and manage your care by learning as much as you can about diabetes.

Resources

DIABETES SELF-MANAGEMENT EDUCATION PROGRAMS (DSME) - Educators with the designations of Certified Diabetes Educator (CDE) are certified by the National Certification Board of Diabetes Educators. Professional organizations including the American Association of Diabetes Educators and the American Diabetes Association (ADA) are committed to successful self-management of diabetes. Programs recognized by the American Association of Diabetes Educators (AADE) and American Diabetes Association (ADA) both meet the national standards for excellence in diabetes education.

Programs recognized by the American Association of Diabetes Educators (AADE) and American Diabetes Association (ADA) both meet the national standards for excellence in diabetes education.

Diabetes Self-Management Education Programs recognized by these organizations are delivered in several settings throughout Georgia including: medical centers (hospitals), pharmacies, and doctor offices.

STANFORD CHRONIC DISEASE SELF-MANAGEMENT

PROGRAMS (CDSMP) - Living Well Workshops are for adults with any chronic condition or for caregivers of persons with chronic conditions to learn more skills about managing their health and well-being. CDSMP is intended to support recommendations patients receive from their doctor, these evidence-based programs teach participants some aspects including:

- how to exercise properly and eat healthy,
- how use medications appropriately,
- how to solve everyday challenges or problems,
- how to speak to and partner effectively with family members and healthcare providers

As a result, learning these new skills help participants reduce symptoms such as: pain, depression, fear, and frustration; and to also improve mobility and exercise; increase energy; and boost confidence in their ability to manage their condition.

Living Well Workshops in Georgia are held once a week. Participants meet for 2 ½ hours for 6 weeks throughout several regions statewide. Living Well Workshops are hosted in various settings: senior centers, churches, clinics, libraries, etc.

For additional information, Georgians may contact their local Area Agency on Aging (AAA)-Georgia Division of Aging Services. 1-866-552-4464 (1-866-55 AGING)

MEDICAL CARE AND CHECK UPS : FINDING A “MEDICAL HOME” FOR ROUTINE CARE

Where can I go for regular medical care to help me control my diabetes, prediabetes or gestational diabetes? How can I learn more about what supplies or resources I need to address or prevent diabetes complications?

Federally Qualified Health Centers (also known as Community Health Centers) provide quality-oriented primary care and preventive services to children and adults with limited and no health insurance. In addition, Federally Qualified Health Centers (FQHCs) also provide services to adults with health insurance and also offer payment fee schedules based on income and ability to pay (where applicable). FQHCs and Local Health Departments are available throughout Georgia.

Some Georgia FQHCs also provide Diabetes Self-Management Education (DSME) programs accredited by the American Association of Diabetes Educators (AADE). In addition, there are several clinics, medical centers and other healthcare sites providing Diabetes Education Programs recognized by the American Diabetes Association (ADA) throughout Georgia.

Telephone: 1-866-55-AGING (1-866-552-4464)

Healthy Eating Tips

- Eat three meals at regular times plus three healthy snacks
- Balance carbohydrates, proteins and fats in your snacks and meals
- Watch your portion sizes at each meal and snack
- Build a healthy plate – one-quarter protein, one-quarter starch and one-half vegetables
- Eat more high fiber foods
- Limit processed grains, sugars and sweets
- Limit or eliminate trans fats and saturated fats

The Academy of Nutrition and Dietetics is one of world's largest organization of food and nutritional professionals. The "Find a RD" or "Find a Registered Dietician" online referral service allows viewers to search a local qualified food and nutrition practitioners throughout the state and nation.

The Georgia Department of Agriculture features a network of local state farmers' markets. It also features community farmers' markets which are places where farmers sell directly to their neighbors.

The Georgia Cooperative Extension sponsors events including Diabetes Cooking School in various Georgia locations. In addition, it also sponsors "Expanded Food and Nutrition Program" a training program that assists parents feed their children healthier and cost-saving meals and snacks. Nutrition education is also provided to Georgia children ages 4-18.

The Georgia Food Bank Association is made up of seven regional food banks. Working through more than 2,300 partner agencies and pantries to reach 159 counties statewide. Food banks work to increase food security among low-income and needy children, seniors and working families in Georgia.

The Georgia Women, Infants and Children (WIC) Clinics provide nutrition education and supplemental foods to pregnant women, postpartum women, women who are breastfeeding, as well as children up to age 5. Services are provided to women population groups featured above with a low income or an annual income at or below 185 percent of the federally poverty level or enrolled in Medicaid; and who are at risk for nutritional deficiencies.

Open Hand is an organization that assist Georgians to prevent or better manage chronic disease through Comprehensive Nutrition Care by combining home-delivered meals and nutrition education.

BEING ACTIVE

How can I exercise with my busy life? How can I learn about the most appropriate physical activity for me and my condition? How can I work with my healthcare provider to develop an exercise plan that meets my interests and daily schedule?

Physical Activity Tip

Partner with your healthcare provider to develop an exercise plan and to choose a list of physical activities most appropriate for your lifestyle and condition (diabetes, prediabetes, gestational diabetes)

Listed in this guide are just a few walking programs available in Georgia. Please work with your healthcare provider and other members of the healthcare team to obtain information about additional walking programs available in your city, town or county. Walking programs maybe sponsored by community organizations, faith-based organizations, neighborhood associations as well as businesses for their employees. And maybe conducted at local parks or schools.

“Walk Georgia” is an 12-week program to increase your physical activity in a fun, community-oriented way. Georgians may participate as an individual or form a team. “Walk Georgia” is sponsored through the local Cooperative Extension Office. Georgians may also sign up to obtain a weekly newsletter which features recipes and other healthy lifestyle tips.

TAKING MEDICATIONS

Diabetes is a serious medical condition disease requiring daily management. If uncontrolled, diabetes can lead to the complications of heart disease, stroke, kidney disease, nerve damage, including amputations and eye disease.

Important factors such as: taking medications as prescribed as well as maintaining regular physician, lab, and specialist visits to monitor diabetes and its complications, can help prevent or delay the onset of complications.

Medication Tips

If you are prescribed diabetes medications such as: pills or insulin injections, please ask questions. Provide your primary care doctor and specialists with a list of all of your medications and medication changes during each visit.

Always share with your healthcare provider and members of the healthcare team if you are unable to refill your medications or forget to take your medications as recommended. The healthcare team will work with you to prevent or reduce these any issues or challenges with taking your medications.

Maintaining an annual dilated eye exam each year is very important. Try to maintain a pair of eyeglasses based on your most recent prescription so that words and numbers are clearly seen for reading medication bottles, syringes as well as glucometers.

*Having the Right Diabetes Supplies

SUPPORT: DIABETES MONITORING SUPPLIES

Featured in this guide are a few resources to assist you with information to access and take your medications as prescribed along with other supplies to control your diabetes condition. It may be helpful to ask your local pharmacy or pharmacist about the availability of home delivery services.

Diabetes Supply Tips

- Try to maintain a current glucometer (glucose monitoring device) and other glucose monitoring supplies (i.e. diabetes strips, etc.).
- Work with your healthcare provider and diabetes educator by asking questions before and during visits to ensure that your diabetes equipment is up-to-date, calibrated corrected and working properly.
- If you are unsure of a glucose reading, always ask a loved one or another person to review the reading on your glucometer or diabetes equipment.

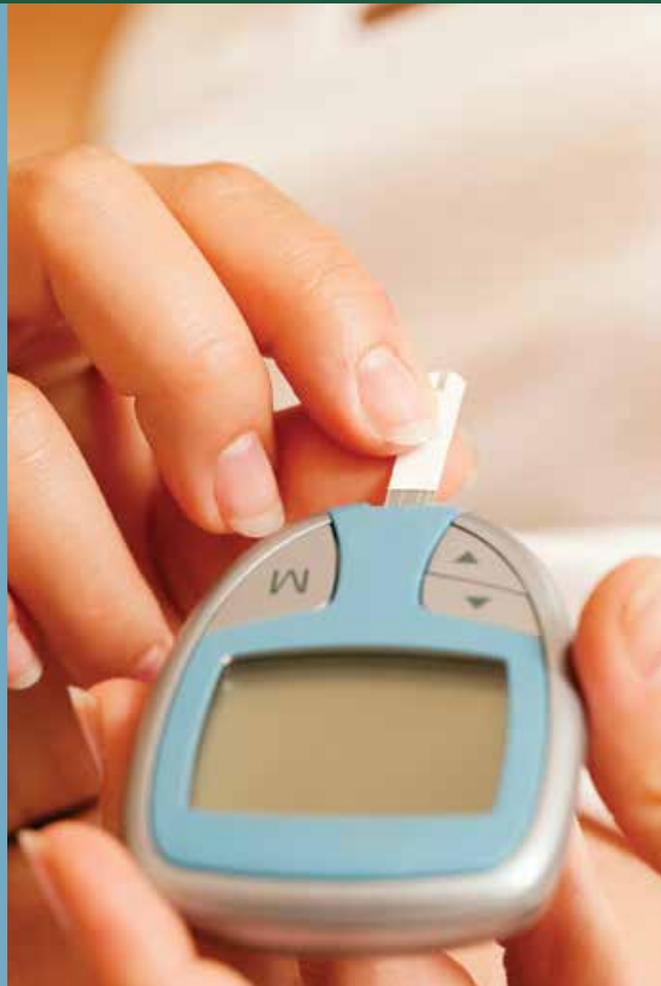

Additional information regarding additional financial information regarding Diabetes medications and supplies are also featured below:

Medicare Coverage of Diabetes Supplies and Services

Website: www.medicare.gov/Publications/Pubs/pdf/11022.pdf

Financial Help For Diabetes Care (Featured by the National Diabetes Information Clearinghouse)

<http://diabetes.niddk.nih.gov/dm/pubs/financialhelp/>

LifeScan and Abbott pharmaceutical companies both participate in the TogetherRx Access program (www.togetherrxaccess.com), which provides certain medications and testing supplies at a 25-40% discount to patients who are not Medicare-eligible and who do not have any prescription coverage.

As always, make sure you discuss any change in your testing habits or glucometer brand with your Primary Care Provider.

Diabetic control should never be sacrificed for financial reasons, so make sure you're putting the time in to find the best deals.

Compare these programs to your insurance benefits and see what works best for you financially:

EYE (VISION) HEALTH

How often should my eyes be checked? What services are available to obtain an annual dilated eye examination and new eyeglasses if needed?

Diabetic eye diseases including: diabetic retinopathy, glaucoma and cataracts can lead to vision problems among persons diagnosed with diabetes. It is recommended that you have a dilated eye exam every year, as vision (eye) problems from diabetes may be prevented with early diagnosis and treatment. Additional healthcare professionals including an optometrist can refer you for an appointment with a eye specialist: ophthalmologist.

***Vision Health is Important
to Preventing Complications***

Eye Care Tips

- ✓ Try to maintain all regular vision (eye) examination appointments. And notify your healthcare provider immediately about any changes in your vision (eye).
- ✓ Check with your eye doctor to maintain a current pair of eyeglasses each year. Having clear vision is helpful for reading medication labels, taking the correct amount of medication as well as preventing falls.
- ✓ Administer your eye drops as recommended by your physicians. Please share with your healthcare care provider if you experience problems with refilling your prescription for your eye drops.

KIDNEY CARE

No symptoms may occur during early kidney disease. How often should my kidneys be checked or tested? Where can I go to have my kidneys checked?

What steps can I take daily keep my kidneys healthy? Am I at high risk for developing kidney disease, if I have diabetes? What is GFR? Have my urine albumin or kidney function test results changed since the last time it was checked?

Kidney Care Tips

- ✓ During routine doctor visits, ask about what annual kidney function tests and what kidney function test results mean.
- ✓ During routine doctor visits, it maybe helpful to ask if you need to make changes to your diet or healthy patterns.
- ✓ It maybe helpful to participate in local kidney screening events held in your community and share results from tests with your physician(s) or doctor(s).
- ✓ Print out a list of questions to ask your doctor or healthcare professional before your next visit. A few examples are featured on the National Kidney Disease Education program website.

Kidney disease, if unmanaged; can lead to kidney failure (also known as end stage renal disease).

Additional organizations provide information to support Georgians diagnosed with kidney disease. They include the Renal Support Network and National Kidney Disease Education Program (NKDEP) featured on this page.

For example, the Renal Support Network aims to help dialysis and renal transplant centers achieve high standards of care for kidney patients in Georgia, North Carolina, and South Carolina.

The National Kidney Disease Education Program (NKDEP) features kidney health resources for individuals diagnosed with kidney disease. NDEP also features information for the general public, healthcare professionals, families and communities.

FOOT CARE

People diagnosed with diabetes can over time experience poor circulation and nerve damage throughout the body. Diabetes-related nerve problems are sometimes more common among people who experience a combination of factors such as: high blood glucose (sugar) levels, long duration of uncontrolled diabetes, high levels of cholesterol and blood pressure or lifestyle factors such as smoking.

Foot Care Tips

Many of these serious problems can be prevented by taking good care of your feet and your health daily. Listed below are a few helpful tips.

- ✓ Manage your diabetes, including keeping your blood sugar (glucose), blood pressure and cholesterol at levels your health care provider recommends.
- ✓ Continue to take your medicines as prescribed even when you feel good.
- ✓ Ask your healthcare provider for assistance to quit smoking. Smoking reduces blood flow to the feet and increases risk of foot problems and amputation. Ask for help to stop smoking by calling 1-800-QUIT-NOW (1-800-784-8669) or the Georgia Tobacco Quit Line (1-877-270-STOP).
- ✓ Ask your doctor to provide a comprehensive foot examination during visits. Comprehensive foot care programs can reduce amputation rates by 45 % to 85 % (percent). Check your feet for sores, blisters, cuts, redness, swelling, infections and calluses as well as other foot problems.

index.html](http://www.cdc.gov/features/diabetesfoothealth/index.html)

DIABETES PREVENTION PROGRAMS

Individuals diagnosed with prediabetes (also known as borderline diabetes) have blood glucose (blood sugar) levels that are higher than normal, but not high enough to be diagnosed as type 2 diabetes. Individuals diagnosed with prediabetes are more likely to develop type 2 diabetes, heart disease, and stroke.

On the other hand, individuals diagnosed with prediabetes can take steps to prevent or delay the onset of Type 2 diabetes. In addition, individuals with gestational diabetes mellitus (GDM) can also take steps during and following pregnancy to prevent or delay the onset of Type 2 diabetes.

What are some daily steps that I can adopt to prevent my risk for diabetes? What is prediabetes or borderline diabetes? Are there local Diabetes Prevention Programs nearby?

What are some other places in my community, city or town that provide an environment for me to participate in physical activity on a regular basis? How can I obtain more information about how my organization or employer can apply to become a part of the Diabetes Prevention Program registry?

Prevention Tips

- ✓ Partner with your doctor and other members of the healthcare team to develop a care plan to reduce your risks for diabetes.
- ✓ Partner with your doctor to select the most appropriate physical activity and meal plans to fit your health condition and lifestyle.
