Asthma is a common and costly disease. Secondhand smoke can trigger and worsen asthma attacks and symptoms in youth and adults. Appropriate disease management and avoidance of triggers can reduce the burden of asthma.

ASTHMA PREVALENCE

- Approximately 137,000 (10%) children ages 10 and younger in Georgia have asthma.
- Approximately 56,000 (15%) middle school students and 70,000 (16%) high school students in Georgia have asthma.
- Approximately 540,000 (8%) adults in Georgia have asthma.

SECONDHAND SMOKE\(^1\) EXPOSURE

- Approximately two-thirds of middle school students and three-fourths of high school students are exposed\(^2\) to secondhand smoke, regardless of asthma status.

CIGARETTE SMOKING PREVALENCE

- Approximately 25,000 (7%) middle school students and 73,000 (17%) high school students in Georgia smoke cigarettes.
- Approximately 1.3 million (20%) adults in Georgia smoke cigarettes.

CIGARETTE SMOKING AND ASTHMA

- Approximately 4,500 (8%) middle school students with asthma and 14,000 (20%) high school students with asthma smoke cigarettes.
- Approximately 151,000 (28%) adult Georgians with asthma smoke cigarettes.

1. Secondhand smoke (SHS) is the combination of the smoke given off by the burning end of a cigarette, cigar, or pipe and the smoke exhaled by smokers.
2. Youth exposed to SHS at home, in a room, in a car and through friends who smoke.

*Student data are from 2005; adult data are from 2006.
HEALTH BURDEN

- There were more than 50,000 visits to the emergency department and over 12,000 hospitalizations for asthma in Georgia in 2005.
- Emergency department visits and hospitalization rates are highest among children ages four and under.
- On average, from 2000 to 2005, there were 117 asthma deaths per year.

ASTHMA PREVENTION cont.

Know the common triggers

Exposure to the following environmental irritants and allergens can cause an asthma attack:
- Tobacco smoke
- Dust mites
- Pets (animal dander)
- Cockroaches
- Fungi and molds (indoor and outdoor)

Take control of asthma

- Reduce exposure to your triggers.
- Work with your doctor to create an asthma management plan.
- Monitor your breathing and airways with a peak flow meter, as recommended by your doctor.
- Treat symptoms early.
- Learn when to seek medical help.

Create an asthma management plan

An asthma management plan is a written guide set up by your doctor and you to help manage your asthma, based on your individual needs.

Your plan will tell you:
- What brings on your asthma symptoms.
- How to avoid triggers and reduce exposure.
- What medicines to take and when to take them.
- When you need to seek medical help.

Tips for using an asthma management plan:
- Go over each step of the plan with your doctor.
- Understand instructions for medications.
- Learn to use equipment, such as nebulizers, properly.
- Schedule routine visits to discuss your asthma with your doctor.
- Let your doctor know if your plan is not working, so that the plan can be revised as needed.
