Asthma is a common and costly disease. Secondhand smoke can trigger and worsen asthma attacks and symptoms in youth and adults. Appropriate disease management and avoidance of triggers can reduce the burden of asthma.

**ASTHMA PREVALENCE**

- Approximately 212,000 (10%) children ages 17 and younger in Georgia have asthma.
- 56,000 middle school students (15%) have asthma.
- 70,000 high school students (16%) have asthma.
- Approximately 480,000 adults (7%) in Georgia have asthma.

**SECONDHAND SMOKE\(^1\) EXPOSURE**

- Approximately two-thirds of middle school students and three-fourths of high school students are exposed\(^2\) to secondhand smoke, regardless of asthma status.

**CIGARETTE SMOKING PREVALENCE**

- Approximately 33,000 middle school students (9%) and 83,000 high school students (19%) in Georgia smoke cigarettes.
- One in four adults (22%) in Georgia smoke cigarettes.

- Among students in Georgia with asthma, approximately 4,500 middle school students (8%) and 14,000 high school students (20%) smoke cigarettes.
- One in four adults with asthma in Georgia (25%) smoke cigarettes.

---

1. Secondhand smoke (SHS) is the combination of the smoke given off by the burning end of a cigarette, cigar, or pipe and the smoke exhaled by smokers.
2. Youth exposed to SHS at home, in a room, in a car and through friends who smoke.
HEALTH BURDEN

• In 2004, there were over 47,000 visits to the emergency room with asthma as the primary diagnosis.
• There were more than 11,000 hospitalizations in 2004 with asthma as the primary diagnosis.
• Emergency room visits and hospitalization rates are highest among children age four and under.
• On average, from 2000 to 2004, there were 117 asthma deaths per year (1.6 per 100,000).

ASTHMA PREVENTION cont.

Know the common triggers

Exposure to the following environmental irritants and allergens can cause an asthma attack:
  - Tobacco smoke
  - Dust mites
  - Pets (animal dander)
  - Cockroaches
  - Fungi and molds (indoor and outdoor)

Take control of asthma

• Reduce exposure to your triggers.
• Work with your doctor to create an asthma management plan.
• Monitor your breathing and airways with a peak flow meter, as recommended by your doctor.
• Treat symptoms early.
• Learn when to seek medical help.

Create an asthma management plan

An asthma management plan is a written guide set up by your doctor and you to help manage asthma based on your individual needs.

Your plan will tell you:
  - What brings on your asthma symptoms
  - How to avoid triggers and reduce exposure
  - What medicine to take and when to take it
  - When you need to seek medical help.

Tips for using an asthma management plan:
  - Go over each step of the plan with your doctor.
  - Understand instructions for medications.
  - Learn to use asthma equipment properly.
  - Schedule routine visits to discuss your asthma with your doctor.
  - If your plan is not working, discuss with your doctor revisions that may be needed.
