

Georgia Weekly Influenza Report

MMWR Week 01

Updated 1/11/2013

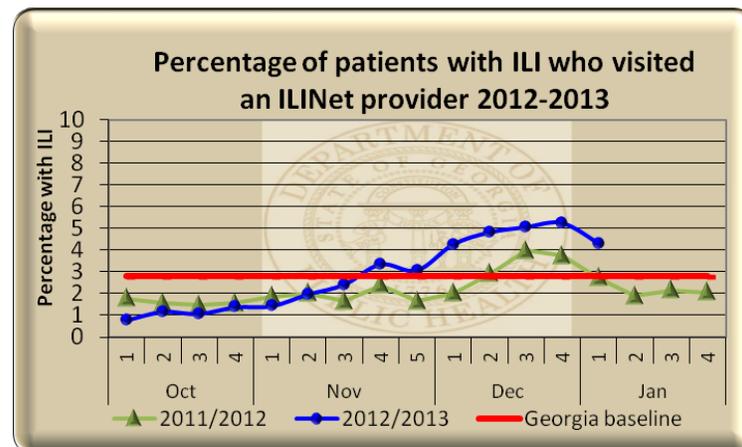

Week 01 (Dec. 29, 2012 - Jan. 5, 2013) Synopsis

During week 01 influenza activity **decreased** in Georgia with widespread occurrences of sustained flu transmission.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **4.3%** (an **decrease of 0.93%**), which is above the Georgia baseline of 2.8%. *This decrease may be a reflection of the decrease in overall physician visits during week 1, as other indicators show sustained ILI during week 1.*
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **WIDESPREAD** during week 01.
- **Metro Area Hospitalizations:** There were **56** hospitalizations due to influenza infection. This brings the total in the Metro area to **471** on the season.
- **Influenza Related Deaths:** There were **0** confirmed deaths due to influenza during week 01 and **1** confirmed flu death in week 51, for a total of **2** for the season.
- **Viral Surveillance:** Of the **1753** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 01, **413 (23.6%)** were positive for influenza.
- **Reported Influenza Outbreaks:** There were **0** influenza-related outbreaks reported to public health during week 01 .
- **RSV Viral Surveillance:** The **average** percent positive of **ALL** laboratory confirmed tests was **24.6%**, above the season onset threshold of 10.0%.

ILINet Provider Network Data

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **38** ILINet providers

This Week: **5.23%** of patients seen in ILINet Provider offices were diagnosed with ILI.

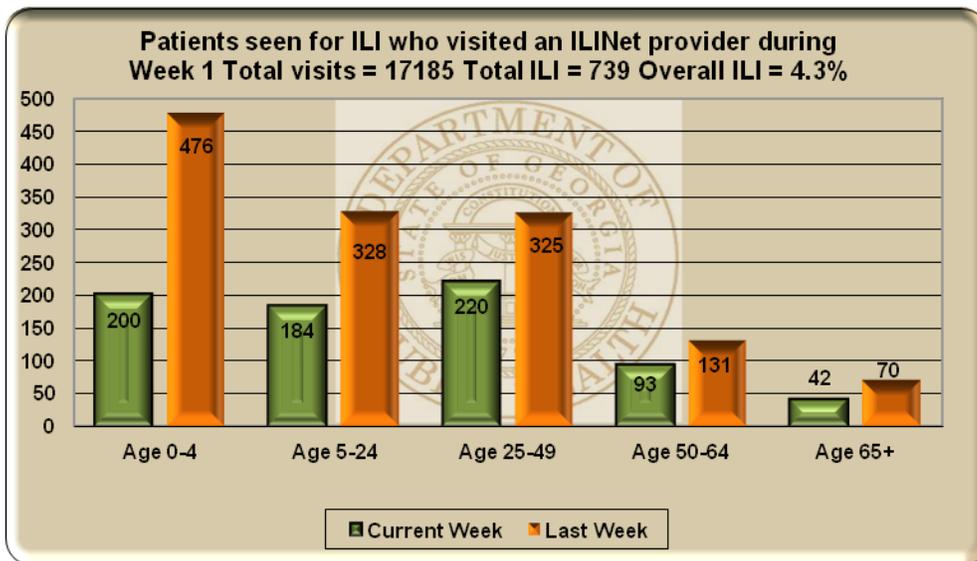

Last Week: **5.04%** of patients seen in ILINet Provider

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory

**GEORGIA
DEPARTMENT OF
PUBLIC HEALTH**

**ILINet patient visits by
age group**

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During week 01 there was an overall decrease in total patients seen at sentinel provider offices .

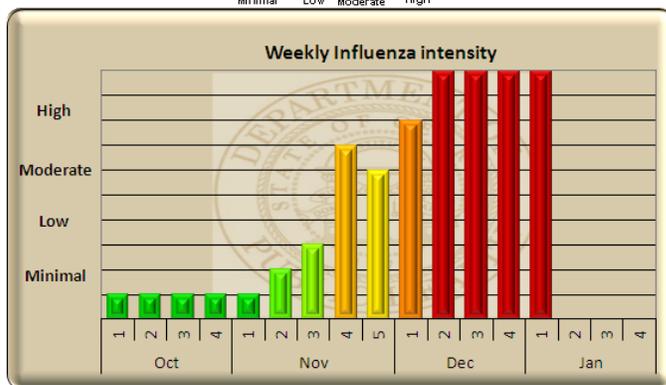

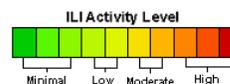

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is:
High = 10

Georgia ILI Intensity Indicator

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

WIDESPREAD

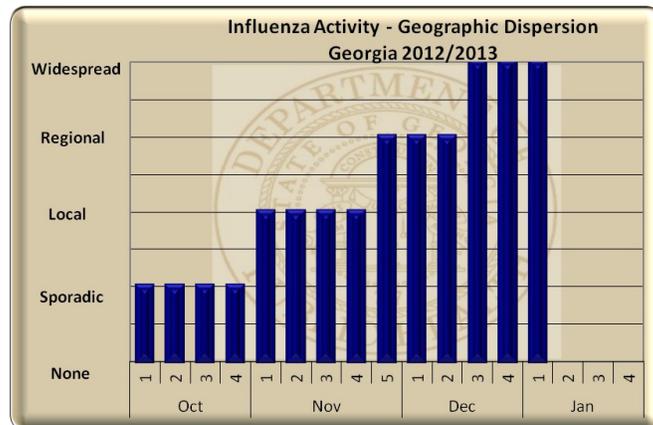

Widespread = Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of all Georgia Health Districts

AND

Recent (within the 3 past weeks) lab confirmed influenza in Georgia

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

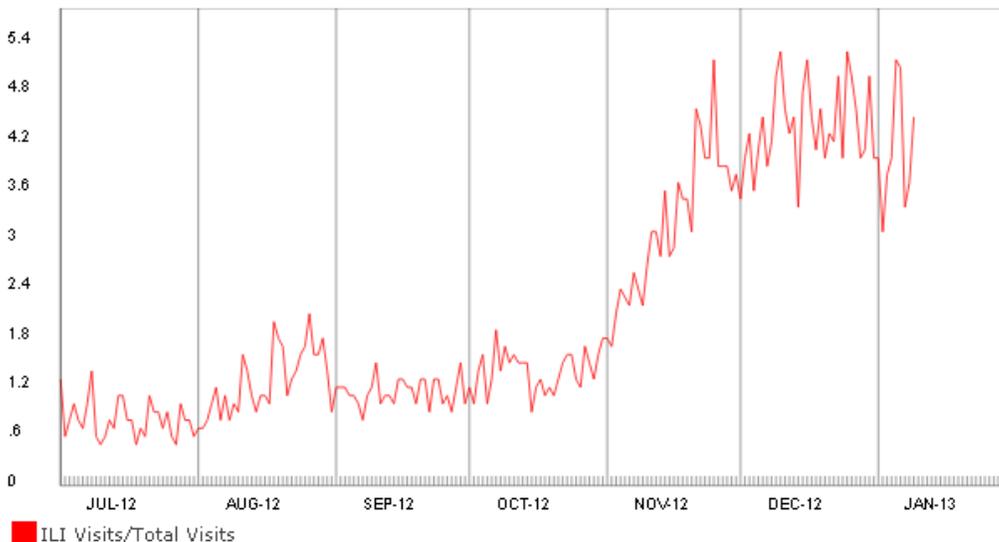

GEORGIA

Syndromic Surveillance
Data Daily Influenza-like
Illness Syndrome
(percentage of ILI visits)

Daily Percent of ILI Syndrome Visits to Georgia Emergency

(Measured by ILI syndrome/ Total visits from Georgia Syndromic Surveillance Program emergency department chief complaint data)

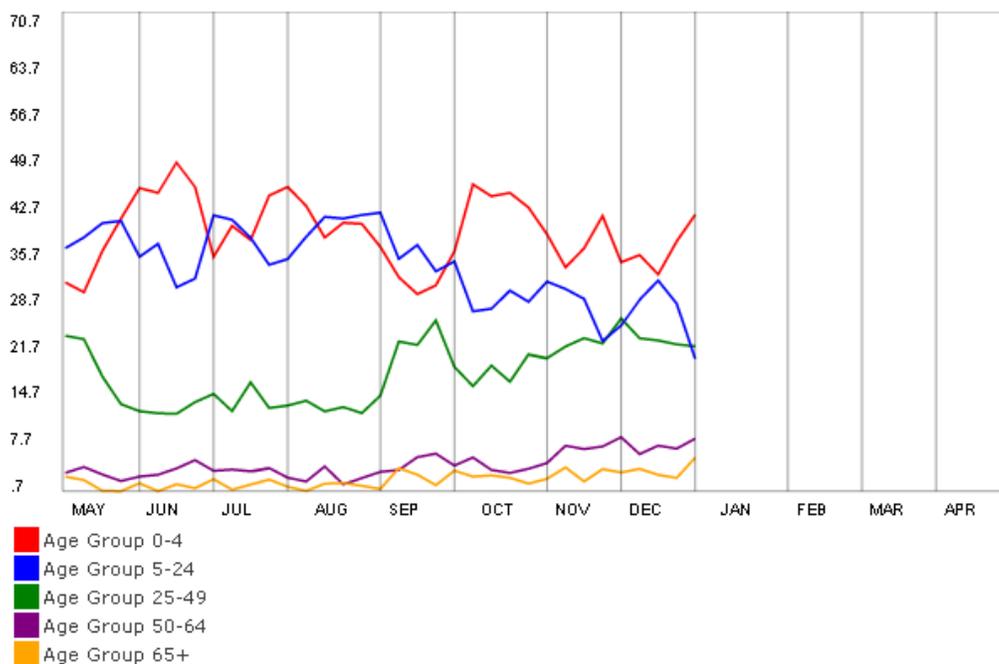

During **week 01** the daily percentage of patients seen for ILI in Georgia Emergency Departments reporting to our syndromic surveillance system remained level.

Council of State and Ter-
ritorial Epidemiologists
Report – Geographic Dis-
persion

(This graph reflects geo-
graphic dispersion and is not
an indicator of influenza se-
verity)

Weekly Percent of ILI Syndrome Visits by Age Group

PUBLIC HEALTH**

Influenza Hospitalizations in the eight county metro Atlanta area 2012-2013 (Emerging Infections Program data)

Influenza-Associated Deaths 2012-2013 State-wide (Influenza-associated deaths are a notifiable condition in Georgia)

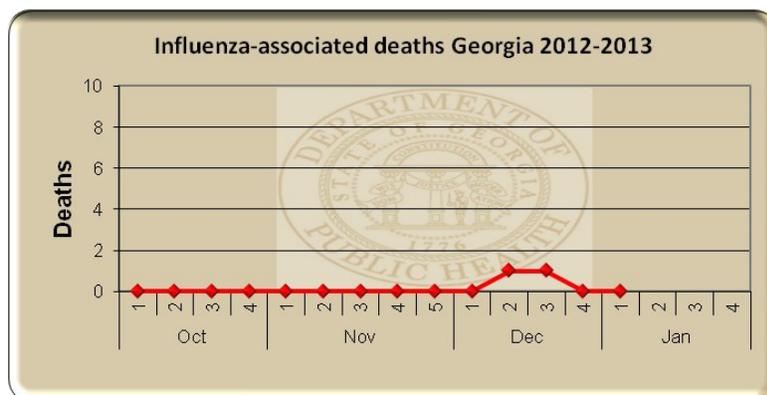

Influenza-Associated hospitalizations in the eight-county metro Atlanta area (Emerging Infections Program data)

Influenza-Associated deaths reported to Public Health

Georgia Influenza-Associated Hospitalizations and Deaths

Age Group	Number of Hospitalizations (8- County Metro-Area Only)	Hospitalization Rate (Cases/100,000 people)
0 - 4	76 (16.1%)	28.11
5 -17	54 (11.5%)	7.7
18 - 49	104 (22.1%)	5.8
49 - 64	64 (13.6%)	9.7
65+	173 (36.7%)	53.2
Total	471 (For confirmation, these data are delayed.)	

Age Group	Number of Deaths
0 - 4	0
5 -17	0
18 - 49	0
49 - 64	1
65+	1
Total	2 (For confirmation, these data are delayed.)

**Georgia threshold
of RSV season on-
set and end**

RSV season onset is defined as the first week of two (2) consecutive weeks when the **average** percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the **average** percent positive of **ALL** lab confirmed tests are less than 10%.

**RSV Season
Status: ON**

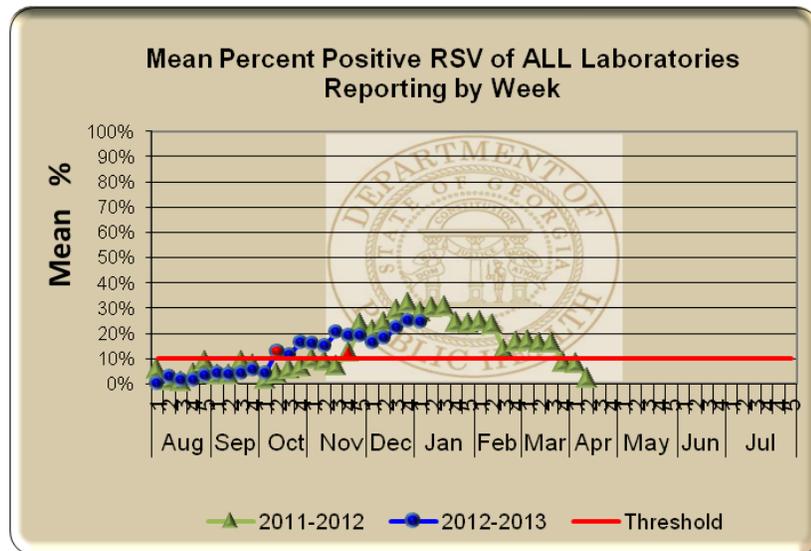

Georgia Virologic Surveillance Data

Note: Includes rapid tests reported from reference Laboratories and the Georgia Public Health Laboratory; not all positive laboratory results for influenza are reported to Public Health.

Respiratory Syncytial Virus (RSV) Surveillance Data
