Prescription Drug Monitoring Program, Georgia, 2016-2017

These data describe opioid prescribing patterns in Georgia during 2016–2017. Prescription data from the Georgia Prescription Drug Monitoring Program (PDMP) were analyzed by the Georgia Department of Public Health (DPH) Epidemiology Program Drug Overdose Surveillance Unit. Certain prescribing practices are considered high-risk, and may predispose patients to opioid use disorder and overdose, hence contributing to the growing opioid epidemic. These prescribing practices are presented as PDMP indicators in this document; detailed analyses of the PDMP data were conducted to measure the total number of opioid prescriptions, number of patients receiving opioids, drug type, days dispensed, and other indicators of prescribing such as overlapping opioid or opioid and benzodiazepine prescriptions.

Prescription Drug Monitoring Program Data Indicators

Data Source

All schedule II-V drug prescriptions dispensed and reported to the Georgia Prescription Drug Monitoring Program during 2016–2017

PDMP Indicator Description

Opioid analgesic prescriptions

Opioid analgesic controlled substance prescriptions dispensed and reported to the PDMP. Drugs administered to patients by substance abuse treatment programs are usually excluded from PDMP files and therefore are not captured by this indicator. Additional exclusion criteria include: (1) drugs not typically used in outpatient settings or otherwise not critical for calculating dosages in morphine milligram equivalents (MME), such as cough and cold formulations including elixirs, and combination products containing antitussives, decongestants, antihistamines, and expectorants; (2) all buprenorphine products. Rate is calculated per 1,000 population (Georgia residents).

Opioid prescription patients

The number of individual patients receiving an opioid analgesic controlled substance prescription that was dispensed and reported to the PDMP. Rate is calculated per 1,000 population (Georgia residents).

Days per opioid prescriptions

The average number of days of opioid analgesics supplied per prescription.

Patients receiving avg. daily dose >= 90 morphine milligram equivalents

% of patients with an average of ≥90 MME of opioid analgesic drugs prescribed per day.

- Numerator: the number of patients with an average of ≥90 MME of opioid analgesic drugs prescribed per day
- Denominator: state residents who received an opioid analgesic prescription
- Average MME per day is calculated from total number of MMEs from all-drugs prescribed per day, inclusive of overlapping prescriptions of either the same and/or differing drugs, divided by the total number of prescription days

Multiple provider episodes for opioids per 100,000 population

The number of patients receiving prescriptions for opioid analgesics from five or more prescribers dispensed at five or more pharmacies (reporting to the PDMP), per 100,000 population.

- Numerator: The number of instances of patients receiving prescriptions for opioid analgesics from five or more prescribers dispensed at five or more pharmacies during a 6-month period
- Denominator: 100,000 population (Georgia residents)

Opioid naïve patients receiving long acting opioids

Patients with no opioid prescriptions in the previous 60 days who were prescribed at least one long acting/extended release (LA/ER) opioid, among all patients with LA/ER opioid prescriptions.

- Numerator: opioid naïve patients with at least one LA/ER opioid prescription
- Denominator: all patients with at least one LA/ER prescription

Patient days with overlapping opioid prescription

% of days that patients had more than one prescribed opioid prescription on the same day.

- Numerator: total number of days any patient had more than one opioid prescription
- Denominator: total number of opioid prescription days for state residents in the state PDMP. A prescribed day with overlapping opioid prescriptions (≥2) is only counted as one prescribed opioid day

Patient days with overlapping opioid and benzodiazepine prescription

% of days that patients had an opioid and benzodiazepine prescription on the same day.

- Numerator: total number of days any patient had an opioid and benzodiazepine prescription on the same day
- Denominator: total number of opioid prescription days for state residents in the state PDMP. A prescribed day with overlapping opioid prescriptions (≥2) is only counted as one prescribed opioid day

Other Definitions or Limitations

Not all out of state pharmacies report to the Georgia PDMP, therefore some prescriptions obtained in another state, or by mail, could be missing from these data.

Rates are not age-adjusted, therefore counties with older populations (that tend to have more chronic conditions for which opioids are prescribed for pain management) may have higher opioid prescription rates due in part to the population distribution.

Some 2017 prescription data were missing sex and age (<2% missing), therefore the race and age data represents only prescriptions for which sex and age where completed.

We report on three categories of controlled substances in this report, these categories include:

- Opioids: Buprenorphine, Butorphanol, Codeine, Dezocine, Dihydrocodeine, Fentanyl, Fentanyl, Hydrocodone, Hydromorphone, Meperidine, Methadone, Morphine, Nalbuphine, Opiate Agonists, Oxycodone, Oxymorphone, Pentazocine, Tapentadol, and other opioids
- Benzodiazepines: Alprazolam, Chlordiazepoxide, Clonazepam, Clorazepate, Diazepam, Estazolam, Flurazepam, Lorazepam, Oxazepam, Temazepam, Triazolam, and other benzodiazepines
- Stimulants: Amphetamine, Benzphetamine, Desoxyephedrine, Dexmethylphenidate, Dextroamphetamine, Lisdexamfetamine, Methylphenidate, and other stimulants
