

Georgia Weekly Influenza Report

MMWR Week 09

Updated 3/9/2018

Week 09 (February 25 — March 3, 2018) Synopsis

During week 09 there was **HIGH** influenza-like illness intensity with **WIDESPREAD** occurrences throughout Georgia.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **4.2%**, which is **above** the regional baseline of 1.9%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **WIDESPREAD** during week 09.
- **Metro Area Hospitalizations:** There were 9 hospitalizations due to influenza infection during week 09. There have been 2,512 hospitalizations due to influenza so far this season.
- **Influenza Related Deaths:** As of week 09, there have been 127 confirmed influenza-associated deaths (4 pediatric) for the 2017-2018 season.
- **Viral Surveillance:** Of the **893** specimens tested by Georgia clinical laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) during week 09, 102 (**11.4%**) were positive for influenza. Public Health Laboratories tested 31 specimens, 2 were positive for influenza.
- **Reported Influenza Outbreaks:** There have been **158** influenza outbreaks reported to DPH so far this season.
- **RSV Viral Surveillance:** Of the **330** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 09, the percent positive of **ALL** laboratory tests was **6.67%**.

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **52** ILINet providers reporting in Georgia.)

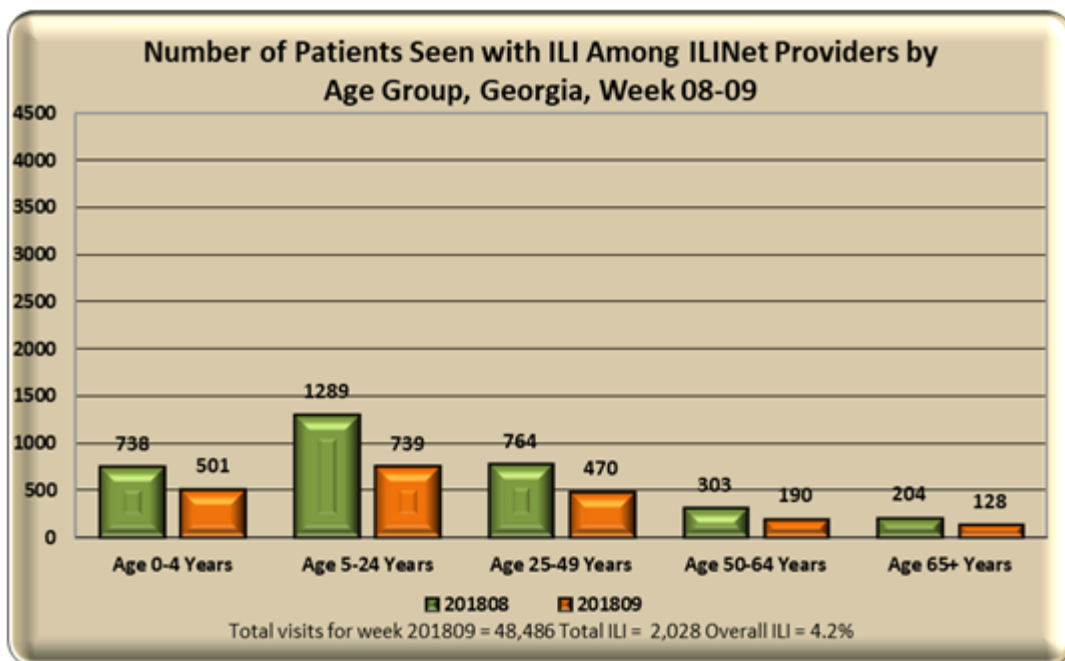

ILINet Provider Network Data

This Week: **4.2%** of patients seen in ILINet Provider offices were seen with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

ILINet Patient Visits By Age Group

ILINet patient visits by age group

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During **week 09** those 0 – 49 years of age were most often seen with ILI symptoms by ILINet providers.

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>)

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is: **High = 9**

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

WIDESPREAD

Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of the regions

AND

Recent (within the past 3 weeks) lab confirmed influenza in the state in region with the outbreaks; virus activity is no greater than sporadic in other regions

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

Influenza Positive Tests Reported to Public Health by Georgia Clinical Laboratories, Georgia, 2017-2018, Week 03-09

During week 09 Georgia clinical laboratories reporting to NREVSS tested 893 specimens for influenza, 102 (11.4%) were positive. Both influenza A and B were identified.

Note: No subtyping information will be released from clinical laboratories

Influenza Positive Tests from Public Health Laboratories, Georgia, 2017-2018, Week 03-09

Public Health Laboratories tested 31 specimens for influenza during week 09, 2 specimens were positive for influenza B.

Georgia threshold of RSV season onset and end

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of ALL lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of ALL lab confirmed tests are less than 10%.

RSV Season Status: **OFF**

Respiratory Syncytial Virus (RSV) Surveillance Data
