

Georgia Weekly Influenza Report

MMWR Week 11

Updated 3/23/2018

Week 11 (March 10 — March 17, 2018) Synopsis

During week 11 there was **MODERATE** influenza-like illness intensity with **REGIONAL** occurrences throughout Georgia.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **3.5%**, which is **above** the regional baseline of 1.9%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **REGIONAL** during week 11.
- **Metro Area Hospitalizations:** There were 14 hospitalizations due to influenza infection during week 11. There have been 2,723 hospitalizations due to influenza so far this season.
- **Influenza Related Deaths:** As of week 11, there have been 137 confirmed influenza-associated deaths (4 pediatric) for the 2017-2018 season.
- **Viral Surveillance:** Of the **483** specimens tested by Georgia clinical laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) during week 11, **63 (13%)** were positive for influenza. Public Health Laboratories tested 11 specimens during week 11, 0 specimens was positive for influenza.
- **Reported Influenza Outbreaks:** There have been **159** influenza outbreaks reported to DPH so far this season.
- **RSV Viral Surveillance:** Of the **291** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 11, the percent positive of **ALL** laboratory tests was **8%**.

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **51** ILINet providers reporting in Georgia.)

ILINet Provider Network Data

This Week: **3.5%** of patients seen in ILINet Provider offices were seen with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

ILINet Patient Visits By Age Group

ILINet patient visits by age group

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During **week 11** those 0 – 49 years of age were most often seen with ILI symptoms by ILINet providers.

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>)

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is: **Moderate = 7**

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

REGIONAL

Outbreaks of influenza OR Increases in ILI cases and recent laboratory-confirmed influenza cases in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions in region with the outbreaks; virus activity is no greater than sporadic in other regions

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

****Georgia Influenza-Associated Hospitalizations**

Age Group	Number of Hospitalizations (8- County Metro-Area Only)	Cases/100,000
0 - 4	197	73.28
5 -17	151	20.63
18 - 49	570	30.83
50 - 64	585	80.08
65+	1,220	296.53
Unknown	0	N/A
Total	2,723	68.22

Influenza Hospitalizations in the eight county metro Atlanta area 2017-2018 (Emerging Infections Program data)

Georgia Influenza-Associated Deaths

Age Group	Number of Deaths
0 - 4	0
5 -17	4
18 - 51	12
51 - 64	24
65+	97
Total	137

Influenza-Associated Deaths 2017-2018 Statewide (Influenza-associated deaths are a notifiable condition in Georgia)

Georgia Virologic Surveillance Data

**GEORGIA
DEPARTMENT OF
PUBLIC HEALTH**

During **week 11** Georgia clinical laboratories reporting to NREVSS tested 483 specimens for influenza, 63 (13%) were positive. Both influenza A and B were identified.

Note: No subtyping information will be released from clinical laboratories

Public Health Laboratories tested 11 specimens for influenza during **week 11**, 0 specimens were positive for influenza.

Georgia threshold of RSV season on-set and end

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of **ALL** lab confirmed tests are less than 10%.

RSV Season Status: OFF

Respiratory Syncytial Virus (RSV) Surveillance Data
