Section 2: Education

The DPH Rules on On-site Sewage Management Systems (chapter 290-5-26) stipulate that “any person who holds a valid certificate of registration as an engineer issued pursuant to Chapter 15 of Title 43 and is practicing within his or her area of engineering competency” may register with Department of Public Health to perform soil investigations of the suitability of a site within the state for an on-site sewage management system, provided they meet the insurance requirements and provide a completed application to the Department.

Demonstration of “practicing within his/her area of engineering competency” normally requires a degree in civil engineering and at least 5 quarter-hours or 3 semester hours of college level courses in soil classification, soils laboratory or geotechnical engineering. The Soil Classifiers Certification Advisory Committee may recommend approval of an engineer to perform soil investigations if, in the judgment of the Committee, documentation of equivalent training and experience demonstrates competence.
