

Georgia Weekly Influenza Report

MMWR Week 08

Updated 3/6/2015

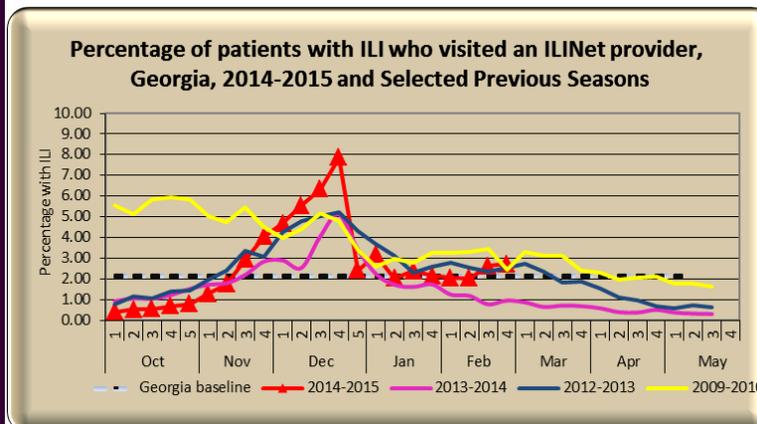

Week 08 (Feb. 22 - Feb. 28, 2015) Synopsis

During week 08 there was regional influenza activity in Georgia with low occurrences of sustained flu transmission.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was 2.71%, which is above the Georgia baseline of 2.1%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **REGIONAL** during week 08.
- **Metro Area Hospitalizations:** There were **6 hospitalizations** due to influenza infection during week 08. There have been **1,127** hospitalizations due to influenza infection so far this season
- **Influenza Related Deaths:** There were **2** confirmed influenza-associated death during week 08. There have been **27** confirmed influenza-associated deaths as of 3/6/2015.
- **Reported Influenza Outbreaks:** There were 2 influenza-associated outbreaks during week 08. There have been **34** influenza-related outbreaks so far this season.
- **Viral Surveillance:** Of the **536** Specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 08, **65 (12.13%)** were positive for influenza.
- **RSV Viral Surveillance:** Of the **123** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 08, the percent positive of **ALL** laboratory confirmed tests was **14.63%**.

ILINet Provider Network Data

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **22** ILINet providers reporting in Georgia.)

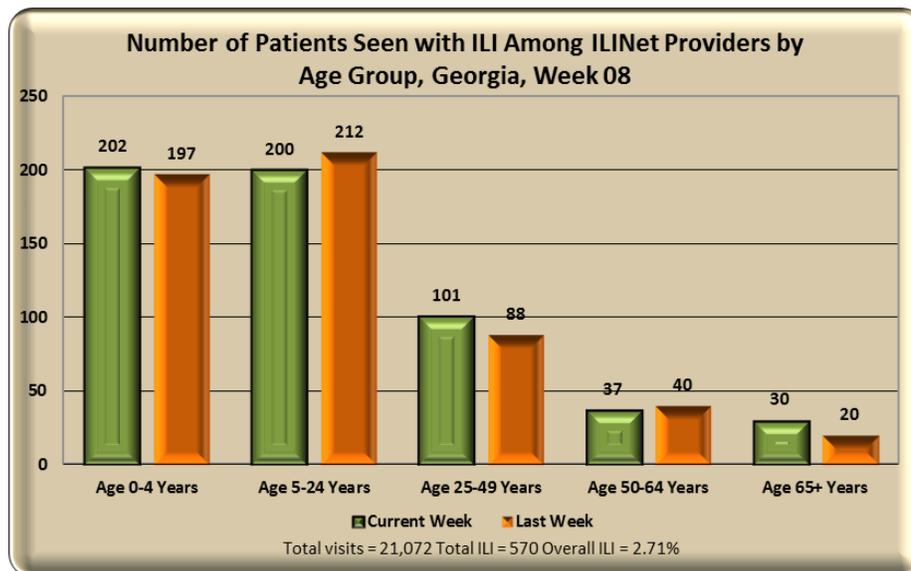

This Week: **2.71%** of patients seen in ILINet Provider offices were diagnosed with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

DEPARTMENT OF
PUBLIC HEALTH**

**ILINet patient visits by
age group**

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

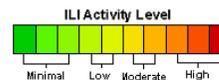

During **week 08** those aged 0 to 24 years were most often seen with ILI symptoms by ILINet providers.

ILI Activity Level Indicator - ILINet

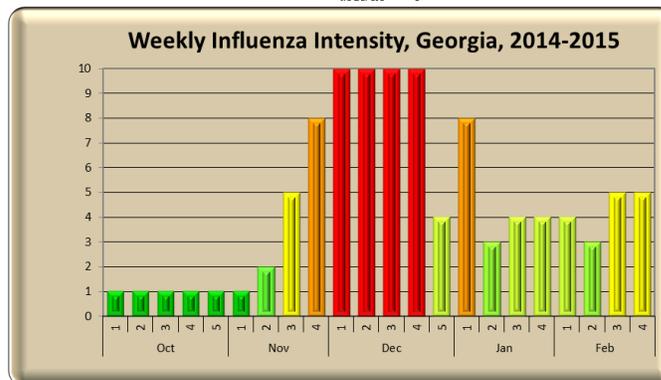

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is:
Low = 5

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

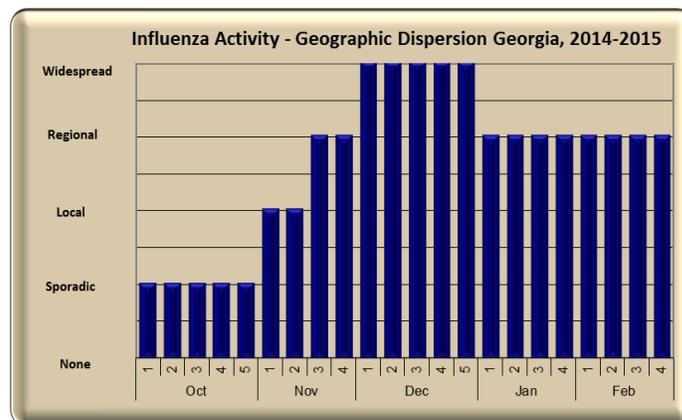

REGIONAL

Regional = Outbreaks of influenza
OR

Increases in ILI cases and recent laboratory-confirmed influenza cases in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

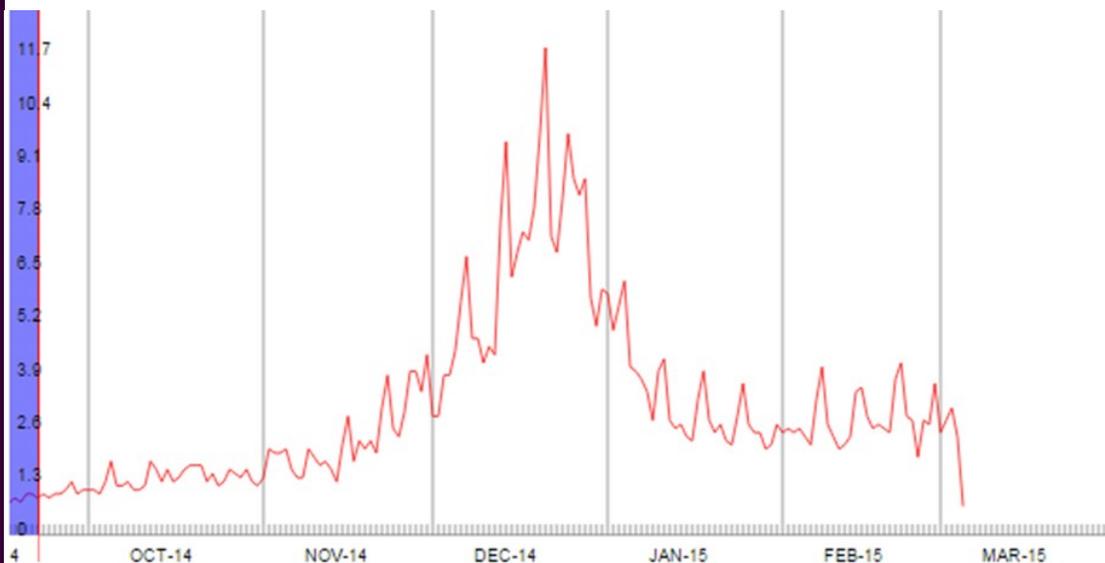

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

**Georgia threshold
of RSV season on-
set and end**

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of **ALL** lab confirmed tests are less than 10%.

RSV Season Status: ON

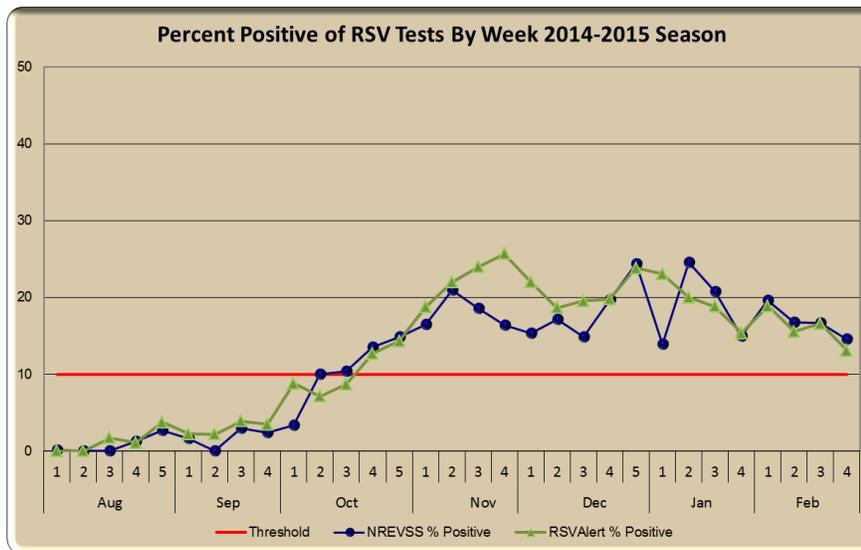

Georgia Virologic Surveillance Data

Note: Includes rapid tests reported from reference Laboratories and the Georgia Public Health Laboratory; not all positive laboratory results for influenza are reported to Public Health.

Respiratory Syncytial Virus (RSV) Surveillance Data
