

Georgia Weekly Influenza Report

MMWR Week 08

Updated 3/3/2016

Week 08 (Feb. 21 - Feb. 27, 2016) Synopsis

During week 08 there was low influenza activity in Georgia with regional occurrences of sustained flu transmission.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **2.65%**, which is **above** the Georgia baseline of 1.6%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **REGIONAL** during week 08.
- **Metro Area Hospitalizations:** There were 32 hospitalizations due to influenza infection during week 08. There have been 159 hospitalizations due to influenza infection so far this season.
- **Influenza Related Deaths:** There were 0 confirmed deaths due to influenza. There have been 2 confirmed influenza-associated death as of 3/3/2016.
- **Viral Surveillance:** Of the **658** specimens tested by Georgia clinical laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) during week 08, **112 (17.02%)** were positive for influenza. Public Health Laboratories tested 48 specimens during week 08, 27 were positive for influenza.
- **Reported Influenza Outbreaks:** There were **0** influenza-related outbreaks reported to public health during week 08.
- **RSV Viral Surveillance:** Of the **162** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 08, the percent positive of **ALL** laboratory tests was 6.8%.

Percentage of patients with ILI reported by ILINet providers

(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **28** ILINet providers reporting in Georgia.)

ILINet Provider Network Data

Percentage of patients with ILI who visited an ILINet provider, Georgia, 2015-2016 and Selected Previous Seasons

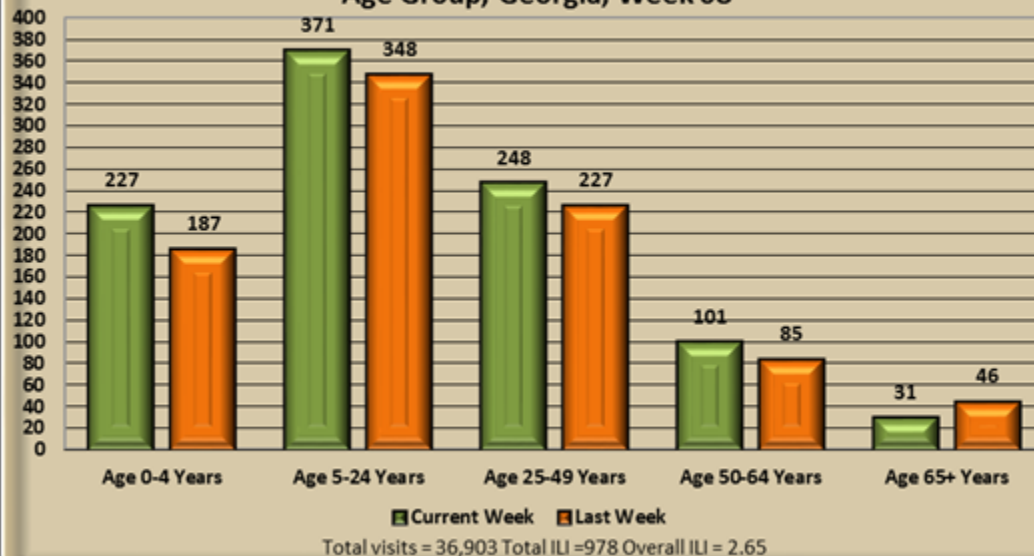

This Week: **2.65%** of patients seen in ILINet Provider offices were diagnosed with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

ILINet Patient Visits By Age Group

Number of Patients Seen with ILI Among ILINet Providers by Age Group, Georgia, Week 08

ILINet patient visits by age group

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During **week 08** those under 49 years of age were most often seen with ILI symptoms by ILINet providers.

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is: **Low = 5**

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

REGIONAL

Regional = Outbreaks of influenza OR increases in ILI activity and recent laboratory-confirmed influenza cases in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

Georgia Influenza-Associated Hospitalizations

Age Group	Number of Hospitalizations (8- County Metro-Area Only)	Hospitalization Rate (Cases/100,000 people)
0 - 4	31 (19.5%)	11.50
5 -17	16 (10.1%)	2.24
18 - 51	40 (25.2%)	2.20
51 - 64	34 (21.4%)	4.90
65+	38 (23.9%)	10.26
Total	159	4.24

Influenza Hospitalizations in the eight county metro Atlanta area 2015-2016 (Emerging Infections Program data)

Georgia Influenza-Associated Deaths

Age Group	Number of Deaths
0 - 4	0
5 -17	0
18 - 51	0
51 - 64	0
65+	2
Total	2

Influenza-Associated Deaths 2015-2016 Statewide (Influenza-associated deaths are a notifiable condition in Georgia)

Georgia Virologic Surveillance Data

GEORGIA
DEPARTMENT OF
PUBLIC HEALTH

During **week 08** Georgia clinical laboratories reporting to NREVSS tested 658 specimens for influenza, 112 (17.02%) were positive. The predominate strain identified was influenza A.

Note: No subtyping information will be released from clinical laboratories

Public Health Laboratories tested 48 specimen for influenza during **week 08**, 25 Influenza A(H1N1) pdm09 and 2 influenza B.

Georgia threshold of RSV season on-set and end

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of **ALL** lab confirmed tests are less than 10%.

RSV Season Status: ON

Respiratory Syncytial Virus (RSV) Surveillance Data
