

Georgia Weekly Influenza Report

MMWR Week 40

Updated 10/13/2017

Week 40 (October 1 — October 7, 2017) Synopsis

During week 40 there was minimal influenza-like illness activity in Georgia with sporadic occurrences of sustained flu transmission.

- **Outpatient Illness Surveillance (ILINet):** The proportion of outpatient visits for ILI was **1.9%**, which is **at** the regional baseline of 1.9%.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Georgia was **SPORADIC** during week 40.
- **Metro Area Hospitalizations:** There was 1 hospitalization due to influenza infection during week 40.
- **Influenza Related Deaths:** There were 0 confirmed deaths due to influenza during week 40.
- **Viral Surveillance:** Of the **318** specimens tested by Georgia clinical laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) during week 40, and **13 (4.1%)** were positive for influenza. Public Health Laboratories tested 0 specimens during week 40.
- **Reported Influenza Outbreaks:** There were 0 influenza outbreaks reported to DPH between during week 40.
- **RSV Viral Surveillance:** Of the **289** specimens tested and reported by the Georgia Public Health Laboratory (GPHL) and the National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 40, the percent positive of **ALL** laboratory tests was **11%**.

Percentage of patients with ILI reported by ILINet providers
(Volunteer providers who report percentage of patients with ILI seen by their practice or facility weekly. This week there are currently **43** ILINet providers reporting in Georgia.)

ILINet Provider Network Data

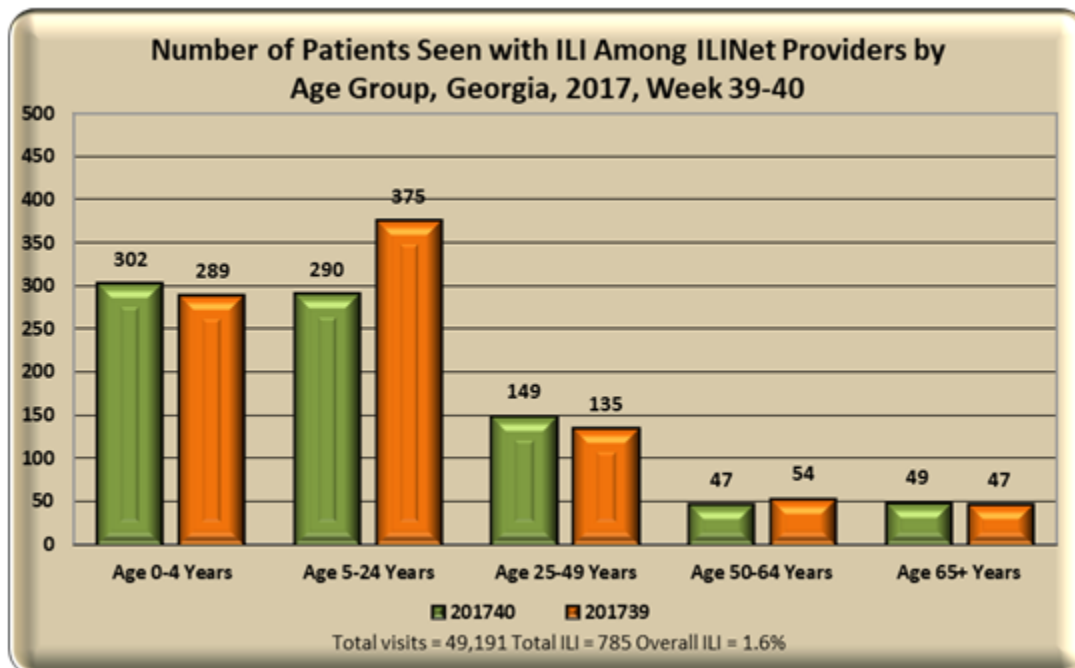

This Week: **1.9%** of patients seen in ILINet Provider offices were seen with ILI.

Note: The Georgia baseline is formulated by averaging ILI percentage during weeks of endemic activity determined by laboratory results for influenza.

ILINet Patient Visits By Age Group

ILINet patient visits by age group

This graph displays the number of patients seen at sentinel provider offices and diagnosed with ILI in the past week. The data are stratified by age-group.

During **week 40** those under 24 years of age were most often seen with ILI symptoms by ILINet providers.

PUBLIC HEALTH**

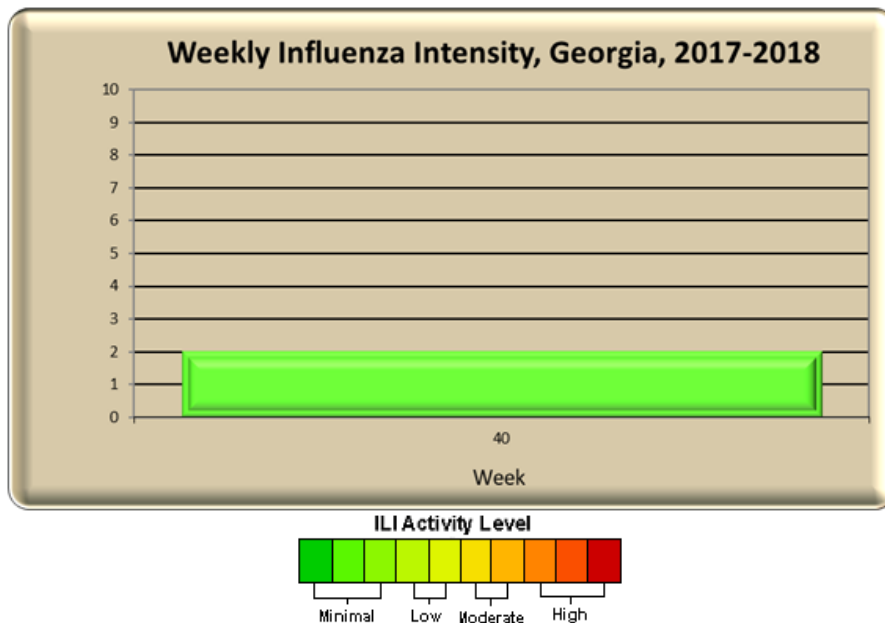

ILI Activity Level Indicator - ILINet

(This graph uses the proportion of outpatient visits for ILI to measure the ILI severity in Georgia.) For a national view, visit <http://cdc.gov/flu/weekly/>

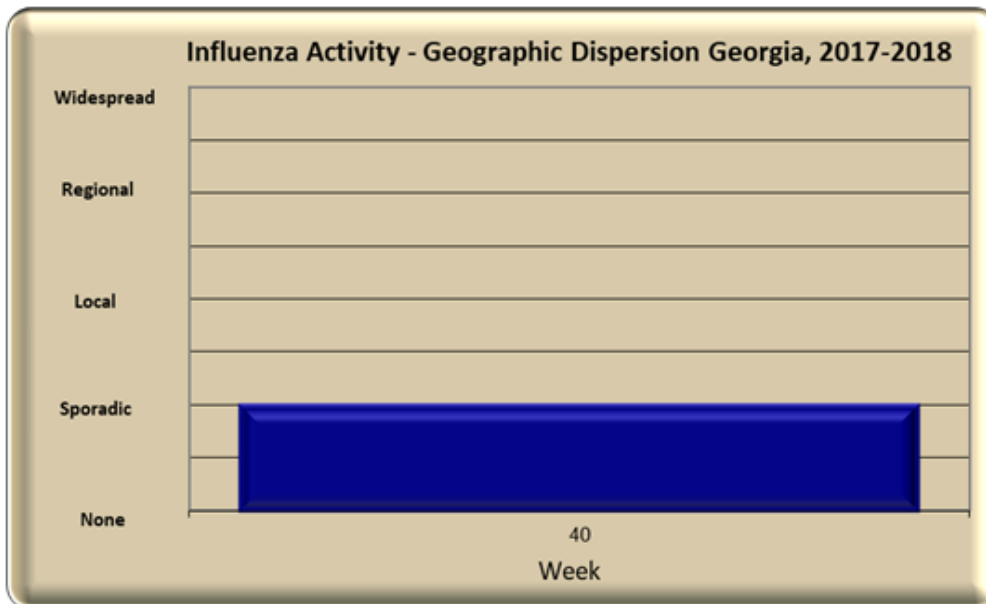

Georgia ILI Intensity Indicator

ILI Activity Levels (1 - 10) correspond to the number of standard deviations away from the 3-year mean for the current week.

This week the intensity level is: **Minimal = 2**

Georgia ILI Geographic Dispersion

This Week's Flu Code is:

SPORADIC

ILI activity has not increased and isolated lab-confirmed cases of influenza

OR

ILI activity has not increased and a lab confirmed influenza outbreak in one institution.

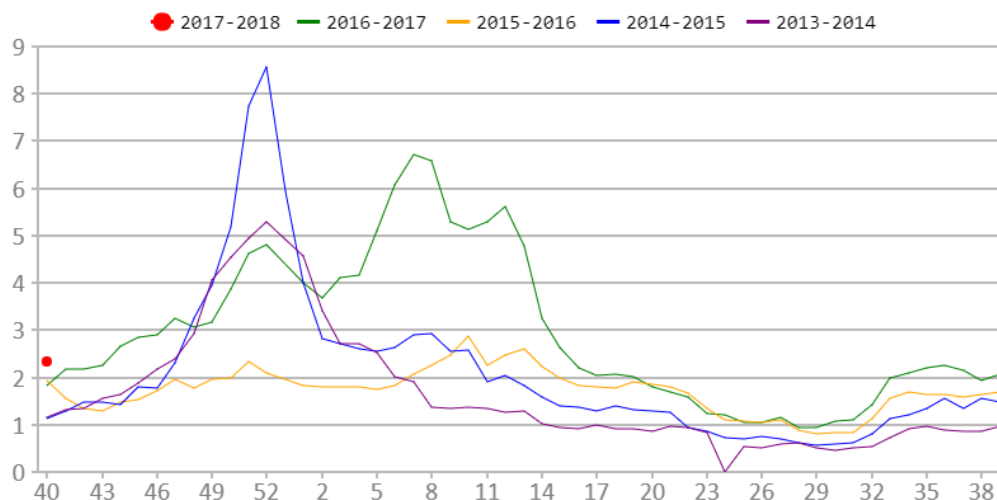

Council of State and Territorial Epidemiologists Report – Geographic Dispersion

(This graph reflects geographic dispersion and is not an indicator of influenza severity)

Georgia Virologic Surveillance Data

**GEORGIA
DEPARTMENT OF
PUBLIC HEALTH**

During **week 40** Georgia clinical laboratories reporting to NREVSS tested 318 specimens for influenza, 13 (4.1%) were positive. Both influenza A and B were identified.

Note: No subtyping information will be released from clinical laboratories

Public Health Laboratories tested 0 specimens for influenza during **week 40**.

Georgia threshold of RSV season onset and end

RSV season onset is defined as the first week of two (2) consecutive weeks when the percent positive of **ALL** lab confirmed tests are greater than or equal to 10%. The end of RSV season is now defined as the first week of two consecutive weeks when the percent positive of **ALL** lab confirmed tests are less than 10%.

RSV Season Status:

OFF

Respiratory Syncytial Virus (RSV) Surveillance Data
